1 Project Roadmap

ForceBalance is a work in progress and is continually being improved and expanded! Here are some current and future project development ideas.

1.1 Short Term (summer 2013)

- Create and expand project unit testing framework to encourage a test driven development approach
- Improve/consolidate existing documentation

1.2 Long Term

- Development of a ForceBalance GUI interface to complement the current command line interface
- More comprehensive tutorial to walk users through the initial process of setting up targets and preparing for a successful ForceBalance run

2 Todo List

Member `forcebalance.abinitio.AbInitio.__init__`

Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Member `forcebalance.abinitio.AbInitio.get_energy_force_`

Parallelization over snapshots is not implemented yet

Member `forcebalance.abinitio.AbInitio.read_reference_data`

Add an option for picking any slice out of qdata.txt, helpful for cross-validation

Closer integration of reference data with program - leave behind the qdata.txt format? (For now, I like the readability of qdata.txt)

The WHAM Boltzmann weights are generated by external scripts (wanalyze.py and make-wham-data.sh) and passed in; perhaps these scripts can be added to the ForceBalance distribution or integrated more tightly.

Member `forcebalance.counterpoise.Counterpoise.loadxyz`

I should probably put this into a more general library for reading coordinates.

Member `forcebalance.forcefield.FF.mktransmat`

Only project out changes in total charge of a molecule, and perhaps generalize to fragments of molecules or other types of parameters.

The AMOEBA selection of charge depends not only on the atom type, but what that atom is bonded to.

Member `forcebalance.forcefield.FF.rsmake`

Pass in rsfactors through the input file

Class `forcebalance.gmxio.ITP_Reader`

Note that I can also create the opposite virtual site position by changing the atom labeling, woo!

Member `forcebalance.liquid.Liquid.__init__`

Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Member `forcebalance.openmmio.OpenMM_Reader.build_pid`

Add a link here

Member `forcebalance.optimizer.Optimizer.GeneticAlgorithm`

Massive parallelization hasn't been implemented yet

Member `forcebalance.optimizer.Optimizer.Scan_Values`

Maybe a multidimensional grid can be done.

Member `forcebalance.tinkerio.Tinker_Reader.feed`

Put the rescaling factors for TINKER parameters in here. Currently we're using the initial value to determine the rescaling factor which is not very good.

Namespace `forcebalance::gmxio`

Even more stuff from `forcefield.py` needs to go into here.

Even more stuff from `forcefield.py` needs to go into here.

Member `forcebalance::gmxio.pdict`

This needs to become more flexible because the parameter isn't always in the same field. Still need to figure out how to do this.

How about making the PDIHS less ugly?

Member `forcebalance::nifty.floatornan`

I could use suggestions for making this better.

Member [forcebalance::parser.parse_inputs](#)

Implement internal coordinates.

Implement sampling correction.

Implement charge groups.

3 Namespace Index

3.1 Packages

Here are the packages with brief descriptions (if available):

| | |
|---|----|
| forcebalance | 10 |
| forcebalance::abinitio | |
| Ab-initio fitting module (energies, forces, resp) | 12 |
| forcebalance::abinitio_internal | |
| Internal implementation of energy matching (for TIP3P water only) | 13 |
| forcebalance::amberio | |
| AMBER force field input/output | 13 |
| forcebalance::baseclass | 15 |
| forcebalance::basereader | |
| Base class for force field line reader | 15 |
| forcebalance::binding | |
| Binding energy fitting module | 15 |
| forcebalance::chemistry | 16 |
| forcebalance::contact | 19 |
| forcebalance::counterpoise | |
| Match an empirical potential to the counterpoise correction for basis set superposition error (BS-SE) | 20 |
| forcebalance::custom_io | |
| Custom force field parser | 20 |
| forcebalance::finite_difference | 22 |
| forcebalance::forcefield | |
| Force field module | 25 |
| forcebalance::gmxiio | |
| GROMACS input/output | 28 |
| forcebalance::gmxxpio | 31 |
| forcebalance::interaction | |
| Interaction energy fitting module | 32 |

| | |
|--|----|
| forcebalance::leastsq | 32 |
| forcebalance::liquid | |
| Matching of liquid bulk properties | 33 |
| forcebalance::Mol2 | 34 |
| forcebalance::mol2io | |
| Mol2 I/O | 34 |
| forcebalance::molecule | 35 |
| forcebalance::moments | |
| Multipole moment fitting module | 44 |
| forcebalance::nifty | |
| Nifty functions, intended to be imported by any module within ForceBalance | 45 |
| forcebalance::objective | |
| ForceBalance objective function | 60 |
| forcebalance::openmmio | |
| OpenMM input/output | 61 |
| forcebalance::optimizer | |
| Optimization algorithms | 66 |
| forcebalance::parser | |
| Input file parser for ForceBalance jobs | 67 |
| forcebalance::psi4io | |
| PSI4 force field input/output | 72 |
| forcebalance::PT | 73 |
| forcebalance::qchemio | |
| Q-Chem input file parser | 74 |
| forcebalance::target | 75 |
| forcebalance::tinkerio | |
| TINKER input/output | 75 |
| forcebalance::vibration | |
| Vibrational mode fitting module | 77 |

4 Class Index

4.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

| | |
|--|-----|
| forcebalance.forcefield.BackedUpDict | 105 |
| forcebalance.basereader.BaseReader | 106 |

| | |
|--|-----|
| forcebalance.amberio.FrcMod_Reader | 132 |
| forcebalance.amberio.Mol2_Reader | 188 |
| forcebalance.custom_io.Gen_Reader | 138 |
| forcebalance.gmxio.OTP_Reader | 156 |
| forcebalance.openmmio.OpenMM_Reader | 228 |
| forcebalance.psi4io.GBS_Reader | 135 |
| forcebalance.psi4io.Grid_Reader | 140 |
| forcebalance.qchemio.QCIn_Reader | 245 |
| forcebalance.tinkerio.Tinker_Reader | 263 |
| forcebalance.baseclass.ForceBalanceBaseClass | 131 |
| forcebalance.forcefield.FF | 118 |
| forcebalance.objective.Objective | 225 |
| forcebalance.target.Target | 251 |
| forcebalance.abinitio.AbInitio | 78 |
| forcebalance.abinitio_internal.AbInitio_Internal | 96 |
| forcebalance.amberio.AbInitio_AMBER | 89 |
| forcebalance.gmxio.AbInitio_GMX | 92 |
| forcebalance.openmmio.AbInitio_OpenMM | 98 |
| forcebalance.tinkerio.AbInitio_TINKER | 102 |
| forcebalance.binding.BindingEnergy | 110 |
| forcebalance.tinkerio.BindingEnergy_TINKER | 112 |
| forcebalance.counterpoise.Counterpoise | 115 |
| forcebalance.gmxqpio.Monomer_QTPIE | 219 |
| forcebalance.interaction.Interaction | 143 |
| forcebalance.gmxio.Interaction_GMX | 147 |
| forcebalance.openmmio.Interaction_OpenMM | 151 |
| forcebalance.tinkerio.Interaction_TINKER | 154 |
| forcebalance.leastsq.LeastSquares | 160 |
| forcebalance.psi4io.THCDF_Psi4 | 260 |
| forcebalance.liquid.Liquid | 163 |

| | |
|--|-----|
| forcebalance.openmmio.Liquid_OpenMM | 168 |
| forcebalance.tinkerio.Liquid_TINKER | 171 |
| forcebalance.moments.Moments | 212 |
| forcebalance.tinkerio.Moments_TINKER | 216 |
| forcebalance.psi4io.RDVR3_Psi4 | 248 |
| forcebalance.vibration.Vibration | 267 |
| forcebalance.Mol2.mol2 | 173 |
| forcebalance.Mol2.mol2_atom | 179 |
| forcebalance.Mol2.mol2_bond | 184 |
| forcebalance.mol2io.Mol2_Reader | 187 |
| forcebalance.Mol2.mol2_set | 191 |
| forcebalance.molecule.Molecule | 192 |
| forcebalance.molecule.MolfileTimestep | 211 |
| forcebalance.molecule.MyG | 222 |
| forcebalance.optimizer.Optimizer | 230 |
| forcebalance.objective.Penalty | 240 |
| forcebalance.nifty.Pickler_LP | 244 |
| forcebalance.nifty.Unpickler_LP | 266 |
| forcebalance.tinkerio.Vibration_TINKER | 270 |

5 Class Index

5.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

| | |
|---|----|
| forcebalance.abinitio.AbInitio | |
| Subclass of Target for fitting force fields to ab initio data | 78 |
| forcebalance.amberio.AbInitio_AMBER | |
| Subclass of Target for force and energy matching using AMBER | 89 |
| forcebalance.gmxio.AbInitio_GMX | |
| Subclass of AbInitio for force and energy matching using normal GROMACS | 92 |
| forcebalance.abinitio_internal.AbInitio_Internal | |
| Subclass of Target for force and energy matching using an internal implementation | 96 |

| | |
|---|-----|
| forcebalance.openmmio.Ablnitio_OpenMM | |
| Subclass of Ablnitio for force and energy matching using OpenMM | 98 |
| forcebalance.tinkerio.Ablnitio_TINKER | |
| Subclass of Target for force and energy matching using TINKER | 102 |
| forcebalance.forcefield.BackedUpDict | 105 |
| forcebalance.basereader.BaseReader | |
| The 'reader' class | 106 |
| forcebalance.binding.BindingEnergy | |
| Improved subclass of Target for fitting force fields to binding energies | 110 |
| forcebalance.tinkerio.BindingEnergy_TINKER | |
| Subclass of BindingEnergy for binding energy matching using TINKER | 112 |
| forcebalance.counterpoise.Counterpoise | |
| Target subclass for matching the counterpoise correction | 115 |
| forcebalance.forcefield.FF | |
| Force field class | 118 |
| forcebalance.baseclass.ForceBalanceBaseClass | |
| Provides some nifty functions that are common to all ForceBalance classes | 131 |
| forcebalance.amberio.FrcMod_Reader | |
| Finite state machine for parsing FrcMod force field file | 132 |
| forcebalance.psi4io.GBS_Reader | |
| Interaction type -> Parameter Dictionary | 135 |
| forcebalance.custom_io.Gen_Reader | |
| Finite state machine for parsing custom GROMACS force field files | 138 |
| forcebalance.psi4io.Grid_Reader | |
| Finite state machine for parsing DVR grid files | 140 |
| forcebalance.interaction.Interaction | |
| Subclass of Target for fitting force fields to interaction energies | 143 |
| forcebalance.gmxio.Interaction_GMX | |
| Subclass of Interaction for interaction energy matching using GROMACS | 147 |
| forcebalance.openmmio.Interaction_OpenMM | |
| Subclass of Target for interaction matching using OpenMM | 151 |
| forcebalance.tinkerio.Interaction_TINKER | |
| Subclass of Target for interaction matching using TINKER | 154 |
| forcebalance.gmxio.ITP_Reader | |
| Finite state machine for parsing GROMACS force field files | 156 |
| forcebalance.leastsq.LeastSquares | |
| Subclass of Target for general least squares fitting | 160 |

| | |
|--|-----|
| forcebalance.liquid.Liquid | |
| Subclass of Target for liquid property matching | 163 |
| forcebalance.openmmio.Liquid_OpenMM | 168 |
| forcebalance.tinkerio.Liquid_TINKER | 171 |
| forcebalance.Mol2.mol2 | |
| This is to manage one mol2 series of lines on the form: | 173 |
| forcebalance.Mol2.mol2_atom | |
| This is to manage mol2 atomic lines on the form: 1 C1 5.4790 42.2880 49.5910 C.ar 1 <1> 0.0424 | 179 |
| forcebalance.Mol2.mol2_bond | |
| This is to manage mol2 bond lines on the form: 1 1 2 ar | 184 |
| forcebalance.mol2io.Mol2_Reader | |
| Finite state machine for parsing Mol2 force field file | 187 |
| forcebalance.amberio.Mol2_Reader | |
| Finite state machine for parsing Mol2 force field file | 188 |
| forcebalance.Mol2.mol2_set | 191 |
| forcebalance.molecule.Molecule | |
| Lee-Ping's general file format conversion class | 192 |
| forcebalance.molecule.MolfileTimestep | |
| Wrapper for the timestep C structure used in molfile plugins | 211 |
| forcebalance.moments.Moments | |
| Subclass of Target for fitting force fields to multipole moments (from experiment or theory) | 212 |
| forcebalance.tinkerio.Moments_TINKER | |
| Subclass of Target for multipole moment matching using TINKER | 216 |
| forcebalance.gmxqpio.Monomer_QTPIE | |
| Subclass of Target for monomer properties of QTPIE (implemented within gromacs WCV branch) | 219 |
| forcebalance.molecule.MyG | 222 |
| forcebalance.objective.Objective | |
| Objective function | 225 |
| forcebalance.openmmio.OpenMM_Reader | |
| Class for parsing OpenMM force field files | 228 |
| forcebalance.optimizer.Optimizer | |
| Optimizer class | 230 |
| forcebalance.objective.Penalty | |
| Penalty functions for regularizing the force field optimizer | 240 |
| forcebalance.nifty.Pickler_LP | |
| A subclass of the python Pickler that implements pickling of <code>_ElementTree</code> types | 244 |

| | |
|--|-----|
| forcebalance.qchemio.QCIn_Reader | |
| Finite state machine for parsing Q-Chem input files | 245 |
| forcebalance.psi4io.RDVR3_Psi4 | |
| Subclass of Target for R-DVR3 grid fitting | 248 |
| forcebalance.target.Target | |
| Base class for all fitting targets | 251 |
| forcebalance.psi4io.THCDF_Psi4 | 260 |
| forcebalance.tinkerio.Tinker_Reader | |
| Finite state machine for parsing TINKER force field files | 263 |
| forcebalance.nifty.Unpickler_LP | |
| A subclass of the python Unpickler that implements unpickling of _ElementTree types | 266 |
| forcebalance.vibration.Vibration | |
| Subclass of Target for fitting force fields to vibrational spectra (from experiment or theory) | 267 |
| forcebalance.tinkerio.Vibration_TINKER | |
| Subclass of Target for vibrational frequency matching using TINKER | 270 |

6 File Index

6.1 File List

Here is a list of all files with brief descriptions:

| | |
|--------------------------------------|-----|
| __init__.py | 272 |
| abinitio.py | 272 |
| abinitio_internal.py | 273 |
| amberio.py | 273 |
| baseclass.py | 274 |
| basereader.py | 274 |
| binding.py | 274 |
| chemistry.py | 274 |
| contact.py | 275 |
| counterpoise.py | 275 |
| custom_io.py | 276 |
| finite_difference.py | 276 |
| forcefield.py | 277 |

| | |
|--------------------------------|-----|
| gmxio.py | 277 |
| gmxqpio.py | 278 |
| interaction.py | 278 |
| leastsq.py | 279 |
| liquid.py | 279 |
| Mol2.py | 280 |
| mol2io.py | 280 |
| molecule.py | 280 |
| moments.py | 282 |
| nifty.py | 282 |
| objective.py | 284 |
| openmmio.py | 285 |
| optimizer.py | 286 |
| parser.py | 286 |
| psi4io.py | 287 |
| PT.py | 287 |
| qchemio.py | 288 |
| target.py | 288 |
| tinkerio.py | 288 |
| vibration.py | 289 |

7 Namespace Documentation

7.1 forcebalance Namespace Reference

Packages

- namespace [abinitio](#)
Ab-initio fitting module (energies, forces, resp).
- namespace [abinitio_internal](#)
Internal implementation of energy matching (for TIP3P water only)
- namespace [amberio](#)
AMBER force field input/output.
- namespace [baseclass](#)
- namespace [basereader](#)

Base class for force field line reader.

- namespace [binding](#)

Binding energy fitting module.

- namespace [chemistry](#)
- namespace [contact](#)
- namespace [counterpoise](#)

Match an empirical potential to the counterpoise correction for basis set superposition error (BSSE).

- namespace [custom_io](#)

Custom force field parser.

- namespace [finite_difference](#)
- namespace [forcefield](#)

Force field module.

- namespace [gmzio](#)

GROMACS input/output.

- namespace [gmzpio](#)
- namespace [interaction](#)

Interaction energy fitting module.

- namespace [leastsq](#)
- namespace [liquid](#)

Matching of liquid bulk properties.

- namespace [Mol2](#)
- namespace [mol2io](#)

Mol2 I/O.

- namespace [molecule](#)
- namespace [moments](#)

Multipole moment fitting module.

- namespace [nifty](#)

Nifty functions, intended to be imported by any module within ForceBalance.

- namespace [objective](#)

ForceBalance objective function.

- namespace [openmmio](#)

OpenMM input/output.

- namespace [optimizer](#)

Optimization algorithms.

- namespace [parser](#)

Input file parser for ForceBalance jobs.

- namespace [psi4io](#)

PSI4 force field input/output.

- namespace [PT](#)
- namespace [qchemio](#)

Q-Chem input file parser.

- namespace [target](#)
- namespace [tinkerio](#)

TINKER input/output.

- namespace [vibration](#)

Vibrational mode fitting module.

7.2 forcebalance::abinitio Namespace Reference

Ab-initio fitting module (energies, forces, resp).

Classes

- class [AbInitio](#)
Subclass of Target for fitting force fields to ab initio data.

Functions

- def [weighted_variance](#)
A more generalized version of build_objective which is callable for derivatives, but the covariance is not there anymore.
- def [weighted_variance2](#)
A bit of a hack, since we have to subtract out two mean quantities to get Hessian elements.
- def [build_objective](#)
This function builds an objective function (number) from the complicated polytensor and covariance matrices.

7.2.1 Detailed Description

Ab-initio fitting module (energies, forces, resp).

Author

Lee-Ping Wang

Date

05/2012

7.2.2 Function Documentation

7.2.2.1 `def forcebalance.abinitio.build_objective (SPIXi, WCiW, Z, Q0, M0, NCP1, subtract_mean = True)`

This function builds an objective function (number) from the complicated polytensor and covariance matrices.

Definition at line 1150 of file abinitio.py.

7.2.2.2 `def forcebalance.abinitio.weighted_variance (SPIXi, WCiW, Z, L, R, NCP1, subtract_mean = True)`

A more generalized version of build_objective which is callable for derivatives, but the covariance is not there anymore.

Definition at line 1120 of file abinitio.py.

Here is the call graph for this function:

7.2.2.3 `def forcebalance.abinitio.weighted_variance2 (SPIXi, WCIW, Z, L, R, L2, R2, NCP1, subtract_mean = True)`

A bit of a hack, since we have to subtract out two mean quantities to get Hessian elements.

Definition at line 1134 of file abinitio.py.

Here is the call graph for this function:

7.3 forcebalance::abinitio_internal Namespace Reference

Internal implementation of energy matching (for TIP3P water only)

Classes

- class [AbInitio_Internal](#)
Subclass of Target for force and energy matching using an internal implementation.

7.3.1 Detailed Description

Internal implementation of energy matching (for TIP3P water only)

Author

Lee-Ping Wang

Date

04/2012

7.4 forcebalance::amberio Namespace Reference

AMBER force field input/output.

Classes

- class [Mol2_Reader](#)
Finite state machine for parsing Mol2 force field file.
- class [FrcMod_Reader](#)
Finite state machine for parsing FrcMod force field file.
- class [AbInitio_AMBER](#)
Subclass of Target for force and energy matching using AMBER.

Functions

- def [is_mol2_atom](#)

Variables

- dictionary [mol2_pdict](#) = {'COUL':{'Atom':[1], 8:'''}}
- dictionary [frcmod_pdict](#)

7.4.1 Detailed Description

AMBER force field input/output. This serves as a good template for writing future force matching I/O modules for other programs because it's so simple.

Author

Lee-Ping Wang

Date

01/2012

7.4.2 Function Documentation

7.4.2.1 def forcebalance.amberio.is_mol2_atom (line)

Definition at line 32 of file amberio.py.

Here is the call graph for this function:

7.4.3 Variable Documentation

7.4.3.1 dictionary forcebalance::amberio::frcmod_pdict

Initial value:

```

1 {'BONDS': {'Atom': [0], 1: 'K', 2: 'B'},
2   'ANGLES': {'Atom': [0], 1: 'K', 2: 'B'},
3   'PDIHS1': {'Atom': [0], 2: 'K', 3: 'B'},
4   'PDIHS2': {'Atom': [0], 2: 'K', 3: 'B'},
5   'PDIHS3': {'Atom': [0], 2: 'K', 3: 'B'},
6   'PDIHS4': {'Atom': [0], 2: 'K', 3: 'B'},
7   'PDIHS5': {'Atom': [0], 2: 'K', 3: 'B'},
8   'PDIHS6': {'Atom': [0], 2: 'K', 3: 'B'},
9   'IDIHS': {'Atom': [0], 1: 'K', 3: 'B'},
10  'VDW': {'Atom': [0], 1: 'S', 2: 'T'}
11 }

```

Definition at line 20 of file amberio.py.

7.4.3.2 dictionary forcebalance::amberio::mol2_pdict = {'COUL': {'Atom': [1], 8: ''}}

Definition at line 18 of file amberio.py.

7.5 forcebalance::baseclass Namespace Reference

Classes

- class [ForceBalanceBaseClass](#)

Provides some nifty functions that are common to all ForceBalance classes.

7.6 forcebalance::basereader Namespace Reference

Base class for force field line reader.

Classes

- class [BaseReader](#)

The 'reader' class.

7.6.1 Detailed Description

Base class for force field line reader.

Author

Lee-Ping Wang

Date

12/2011

7.7 forcebalance::binding Namespace Reference

Binding energy fitting module.

Classes

- class [BindingEnergy](#)

Improved subclass of Target for fitting force fields to binding energies.

Functions

- def [parse_interactions](#)

Parse through the interactions input file.

7.7.1 Detailed Description

Binding energy fitting module.

Author

Lee-Ping Wang

Date

05/2012

7.7.2 Function Documentation

7.7.2.1 `def forcebalance.binding.parse_interactions (input_file)`

Parse through the interactions input file.

Parameters

| | | |
|-----------------|-------------------------|-----------------------------|
| <code>in</code> | <code>input_file</code> | The name of the input file. |
|-----------------|-------------------------|-----------------------------|

Definition at line 30 of file binding.py.

Here is the call graph for this function:

7.8 forcebalance::chemistry Namespace Reference

Functions

- `def` [LookupByMass](#)
- `def` [BondStrengthByLength](#)

Variables

- tuple [BondEnergies](#) = `defaultdict(lambda:defaultdict(dict))`
- list [Radii](#)
Covalent radii from Cordero et al.
- dictionary [PeriodicTable](#)
- list [Elements](#)
- list [BondChars](#) = `['-', '=', '3']`
- string [data_from_web](#)
- tuple [line](#) = `line.expandtabs()`
- tuple [BE](#) = `float(line.split()[1])`
- tuple [L](#) = `float(line.split()[2])`

- tuple `atoms` = `re.split('[=3]', line.split())[0]`
- list `A` = `atoms[0]`
- list `B` = `atoms[1]`
- tuple `bo` = `BondChars.index(re.findall('[=3]', line.split())[0][0])`

7.8.1 Function Documentation

7.8.1.1 `def forcebalance.chemistry.BondStrengthByLength (A, B, length, artol = 0.33, bias = 0.0)`

Definition at line 164 of file chemistry.py.

7.8.1.2 `def forcebalance.chemistry.LookupByMass (mass)`

Definition at line 155 of file chemistry.py.

7.8.2 Variable Documentation

7.8.2.1 `list forcebalance::chemistry::A = atoms[0]`

Definition at line 149 of file chemistry.py.

7.8.2.2 `tuple forcebalance::chemistry::atoms = re.split('[=3]', line.split())[0]`

Definition at line 148 of file chemistry.py.

7.8.2.3 `list forcebalance::chemistry::B = atoms[1]`

Definition at line 150 of file chemistry.py.

7.8.2.4 `tuple forcebalance::chemistry::BE = float(line.split())[1]`

Definition at line 146 of file chemistry.py.

7.8.2.5 `tuple forcebalance::chemistry::bo = BondChars.index(re.findall('[=3]', line.split())[0][0])`

Definition at line 151 of file chemistry.py.

7.8.2.6 `list forcebalance::chemistry::BondChars = ['-', '=', '3']`

Definition at line 49 of file chemistry.py.

7.8.2.7 `tuple forcebalance::chemistry::BondEnergies = defaultdict(lambda:defaultdict(dict))`

Definition at line 7 of file chemistry.py.

7.8.2.8 `string forcebalance::chemistry::data_from_web`

Definition at line 51 of file chemistry.py.

7.8.2.9 `list forcebalance::chemistry::Elements`

Initial value:

```
1 ["None", 'H', 'He',
2   'Li', 'Be', 'B', 'C', 'N', 'O', 'F', 'Ne',
3   'Na', 'Mg', 'Al', 'Si', 'P', 'S', 'Cl', 'Ar',
```

```

4      'K','Ca','Sc','Ti','V','Cr','Mn','Fe','Co','Ni','Cu','Zn','Ga','Ge'
      ,'As','Se','Br','Kr',

7.9 forcebalance::contact Namespace Reference

Functions

- [def atom_distances](#)
For each frame in xyzlist, compute the (euclidean) distance between pairs of atoms whos indices are given in contacts.
- [def residue_distances](#)
For each frame in xyzlist, and for each pair of residues in the array contact, compute the distance between the closest pair of atoms such that one of them belongs to each residue.

7.9.1 Function Documentation

7.9.1.1 def forcebalance.contact.atom_distances (xyzlist, atom_contacts)

For each frame in xyzlist, compute the (euclidean) distance between pairs of atoms whos indices are given in contacts.

xyzlist should be a traj_length x num_atoms x num_dims array of type float32

contacts should be a num_contacts x 2 array where each row gives the indices of 2 atoms whos distance you care to monitor.

Returns: traj_length x num_contacts array of euclidean distances

Note: For nice wrappers around this, see the prepare_trajectory method of various metrics in metrics.py

Definition at line 26 of file contact.py.

Here is the call graph for this function:

7.9.1.2 def forcebalance.contact.residue_distances (xyzlist, residue_membership, residue_contacts)

For each frame in xyzlist, and for each pair of residues in the array contact, compute the distance between the closest pair of atoms such that one of them belongs to each residue.

xyzlist should be a traj_length x num_atoms x num_dims array of type float32

residue_membership should be a list of lists where residue_membership[i] gives the list of atom indices that belong to residue i. residue_membership should NOT be a numpy 2D array unless you really mean that all of the residues have the same number of atoms

residue_contacts should be a 2D numpy array of shape num_contacts x 2 where each row gives the indices of the two RESIDUES who you are interested in monitoring for a contact.

Returns: a 2D array of traj_length x num_contacts where out[i,j] contains the distance between the pair of atoms, one from residue_membership[residue_contacts[j,0]] and one from residue_membership[residue_contacts[j,1]] that are closest.

Definition at line 85 of file contact.py.

7.10 forcebalance::counterpoise Namespace Reference

Match an empirical potential to the counterpoise correction for basis set superposition error (BSSE).

Classes

- class [Counterpoise](#)

Target subclass for matching the counterpoise correction.

7.10.1 Detailed Description

Match an empirical potential to the counterpoise correction for basis set superposition error (BSSE). Here we test two different functional forms: a three-parameter Gaussian repulsive potential and a four-parameter Gaussian which goes smoothly to an exponential. The latter can be written in two different ways - one which gives us control over the exponential, the switching distance and the Gaussian decay constant, and another which gives us control over the Gaussian and the switching distance. They are called 'CPGAUSS', 'CPEXPG', and 'CPGEXP'. I think the third option is the best although our early tests have indicated that none of the force fields perform particularly well for the water dimer.

This subclass of Target implements the 'get' method.

7.12.1 Function Documentation

7.12.1.1 `def forcebalance.finite_difference.f12d3p(f, h, f0=None)`

A three-point finite difference stencil.

This function does either two computations or three, depending on whether the 'center' value is supplied. This is done in order to avoid recomputing the center value many times.

The first derivative is evaluated using central difference. One advantage of using central difference (as opposed to forward difference) is that we get zero at the bottom of a parabola.

Using this formula we also get an approximate second derivative, which can then be inserted into the diagonal of the Hessian. This is very useful for optimizations like BFGS where the diagonal determines how far we step in the parameter space.

How to use: use fdwrap or something similar to generate a one-variable function from the (usually) much more complicated function that we wish to differentiate. Then pass it to this function.

Inputs: f = The one-variable function f(x) that we're differentiating h = The finite difference step size, usually a small number

Outputs: fp = The finite difference derivative of the function f(x) around x=0.

Definition at line 107 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.2 def forcebalance.finite_difference.f12d7p (f, h)

Definition at line 73 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.3 def forcebalance.finite_difference.f1d2p (f, h, f0=None)

A two-point finite difference stencil.

This function does either two computations or one, depending on whether the 'center' value is supplied. This is done in order to avoid recomputing the center value many times when we repeat this function for each index of the gradient.

How to use: use fdwrap or something similar to generate a one-variable function from the (usually) much more complicated function that we wish to differentiate. Then pass it to this function.

Inputs: f = The one-variable function $f(x)$ that we're differentiating
 h = The finite difference step size, usually a small number

Outputs: fp = The finite difference derivative of the function $f(x)$ around $x=0$.

Definition at line 27 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.4 def forcebalance.finite_difference.f1d5p (f, h)

A highly accurate five-point finite difference stencil for computing derivatives of a function.

It works on both scalar and vector functions (i.e. functions that return arrays). Since the function does four computations, it's costly but recommended if we really need an accurate reference value.

The function is evaluated at points $-2h$, $-h$, $+h$ and $+2h$ and these values are combined to make the derivative according to: <http://www.holoborodko.com/pavel/numerical-methods/numerical-derivative/central-differences/>

How to use: use fdwrap or something similar to generate a one-variable function from the (usually) much more complicated function that we wish to differentiate. Then pass it to this function.

Inputs: f = The one-variable function $f(x)$ that we're differentiating h = The finite difference step size, usually a small number

Outputs: fp = The finite difference derivative of the function $f(x)$ around $x=0$.

Definition at line 58 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.5 def forcebalance.finite_difference.f1d7p (f , h)

A highly accurate seven-point finite difference stencil for computing derivatives of a function.

Definition at line 68 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.6 def forcebalance.finite_difference.fdwrap ($func$, $mvals0$, $pidx$, $key=None$, $kwargs$)

A function wrapper for finite difference designed for differentiating 'get'-type functions.

Since our finite difference stencils take single-variable functions and differentiate them around zero, and our objective function is quite a complicated function, we need a wrapper to serve as a middleman. The alternative would be to copy the finite difference formula to wherever we're taking the derivative, and that is prone to mistakes.

Inputs: $func$ = Either get_X or get_G ; these functions return dictionaries. $['X'] = 1.23$, $['G'] = [0.12, 3, 45, \dots]$ $mvals0$ = The 'central' values of the mathematical parameters - i.e. the wrapped function's origin is here. $pidx$ = The index of the parameter that we're differentiating key = either 'G' or 'X', the value we wish to take out of the dictionary $kwargs$ = Anything else we want to pass to the objective function (for instance, Project.Objective takes Order as an argument)

Outputs: $func1$ = Wrapped version of $func$, which takes a single float argument.

Definition at line 145 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.7 def forcebalance.finite_difference.fdwrap_G (tgt, mvals0, pidx)

A driver to fdwrap for gradients (see documentation for fdwrap) Inputs: tgt = The Target containing the objective function that we want to differentiate mvals0 = The 'central' values of the mathematical parameters - i.e.

the wrapped function's origin is here. pidx = The index of the parameter that we're differentiating

Definition at line 164 of file finite_difference.py.

Here is the call graph for this function:

7.12.1.8 def forcebalance.finite_difference.fdwrap_H (tgt, mvals0, pidx)

A driver to fdwrap for Hessians (see documentation for fdwrap) Inputs: tgt = The Target containing the objective function that we want to differentiate mvals0 = The 'central' values of the mathematical parameters - i.e.

the wrapped function's origin is here. pidx = The index of the parameter that we're differentiating

Definition at line 175 of file finite_difference.py.

7.12.1.9 def forcebalance.finite_difference.in_fd ()

Invoking this function from anywhere will tell us whether we're being called by a finite-difference function.

This is mainly useful for deciding when to update the 'qualitative indicators' and when not to.

Definition at line 119 of file finite_difference.py.

7.13 forcebalance::forcefield Namespace Reference

Force field module.

Classes

- class [BackedUpDict](#)
- class [FF](#)

Force field class.

Functions

- def [determine_fftype](#)
Determine the type of a force field file.
- def [rs_override](#)
This function takes in a dictionary (rsfactors) and a string (termtype).

Variables

- dictionary [FF_Extensions](#)
- dictionary [FF_IOModules](#)

7.13.1 Detailed Description

Force field module. In ForceBalance a 'force field' is built from a set of files containing physical parameters. These files can be anything that enter into any computation - our original program was quite dependent on the GROMACS force field format, but this program is set up to allow very general input formats.

We introduce several important concepts:

- 1) Adjustable parameters are allocated into a vector.

To cast the force field optimization as a math problem, we treat all of the parameters on equal footing and write them as indices in a parameter vector.

- 2) A mapping from interaction type to parameter number.

Each element in the parameter vector corresponds to one or more interaction types. Whenever we change the parameter vector and recompute the objective function, this amounts to changing the physical parameters in the simulations, so we print out new force field files for external programs. In addition, when these programs are computing the objective function we are often in low-level subroutines that compute terms in the energy and force. If we need an analytic derivative of the objective function, then these subroutines need to know which index of the parameter vector needs to be modified.

This is done by way of a hash table: for example, when we are computing a Coulomb interaction between atom 4 and atom 5, we can build the words 'COUL4' and 'COUL5' and look it up in the parameter map; this gives us two numbers (say, 10 and 11) corresponding to the eleventh and twelfth element of the parameter vector. Then we can compute the derivatives of the energy w/r.t. these parameters (in this case, COUL5/rij and COUL4/rij) and increment these values in the objective function gradient.

In custom-implemented force fields (see counterpoisematch.py) the hash table can also be used to look up parameter values for computation of interactions. This is probably not the fastest way to do things, however.

- 3) Distinction between physical and mathematical parameters.

The optimization algorithm works in a space that is related to, but not exactly the same as the physical parameter space. The reasons for why we do this are:

- a) Each parameter has its own physical units. On the one hand it's not right to treat different physical units all on the same footing, so nondimensionalization is desirable. To make matters worse, the force field parameters can be small as 1e-8 or as large as 1e+6 depending on the parameter type. This means the elements of the objective function gradient / Hessian have elements that differ from each other in size by 10+ orders of magnitude, leading to mathematical instabilities in the optimizer.
- b) The parameter space can be constrained, most notably for atomic partial charges where we don't want to change the overall charge on a molecule. Thus we wish to project out certain movements in the mathematical parameters such that they don't change the physical parameters.

c) We wish to regularize our optimization so as to avoid changing our parameters in very insensitive directions (linear dependencies). However, the sensitivity of the objective function to changes in the force field depends on the physical units!

For all of these reasons, we introduce a 'transformation matrix' which maps mathematical parameters onto physical parameters. The diagonal elements in this matrix are rescaling factors; they take the mathematical parameter and magnify it by this constant factor. The off-diagonal elements correspond to rotations and other linear transformations, and currently I just use them to project out the 'increase the net charge' direction in the physical parameter space.

Note that with regularization, these rescaling factors are equivalent to the widths of prior distributions in a maximum likelihood framework. Because there is such a correspondence between rescaling factors and choosing a prior, they need to be chosen carefully. This is work in progress. Another possibility is to sample the width of the priors from a noninformative distribution -- the hyperprior (we can choose the Jeffreys prior or something). This is work in progress.

Right now only GROMACS parameters are supported, but this class is extensible, we need more modules!

7.13.2 Function Documentation

7.13.2.1 `def forcebalance.forcefield.determine_fftype (fname, verbose=False)`

Determine the type of a force field file.

It is possible to specify the file type explicitly in the input file using the syntax 'force_field.ext:type'. Otherwise this function will try to determine the force field type by extension.

Definition at line 143 of file forcefield.py.

7.13.2.2 `def forcebalance.forcefield.rs_override (rsfactors, termtype, Temperature=298.15)`

This function takes in a dictionary (rsfactors) and a string (termtype).

If termtype matches any of the strings below, rsfactors[termtype] is assigned to one of the numbers below.

This is LPW's attempt to simplify the rescaling factors.

Parameters

| | | |
|-----|--------------------|---|
| out | <i>rsfactors</i> | The computed rescaling factor. |
| in | <i>termtype</i> | The interaction type (corresponding to a physical unit) |
| in | <i>Temperature</i> | The temperature for computing the kT energy scale |

Definition at line 1171 of file forcefield.py.

Parameters

| | | |
|-----------------|-------------|-------------|
| <code>in</code> | <i>line</i> | Input line. |
|-----------------|-------------|-------------|

Returns

answer Dictionary containing:
 atom type
 bonded atom type (if any)
 atomic number (if any)
 atomic mass
 charge
 particle type
 force field parameters
 number of optional fields

Definition at line 120 of file gmxi.py.

Here is the call graph for this function:

7.14.2.2 def forcebalance.gmxi.rm_gmx_baks (dir)

Definition at line 359 of file gmxi.py.

7.14.3 Variable Documentation

7.14.3.1 list forcebalance::gmxi::aftypes

Initial value:

```

1 [None, 'ANGLES', 'G96ANGLES', 'CROSS_BOND_BOND',
2   'CROSS_BOND_ANGLE', 'UREY_BRADLEY', 'QANGLES']

```

Angle interaction function types.

Definition at line 30 of file gmxi.py.

7.14.3.2 list forcebalance::gmxi::bftypes = [None, 'BONDS', 'G96BONDS', 'MORSE']

Bonded interaction function types.

Definition at line 28 of file gmxi.py.

7.14.3.3 list forcebalance::gmxi::dftypes = [None, 'PDIHS', 'IDIHS', 'RBDIHS', 'PIMPDIHS', 'FOURDIHS', None, None, 'TABDIHS', 'PDIHMULS']

Dihedral interaction function types.

Definition at line 33 of file gmxi.py.

7.14.3.4 dictionary forcebalance::gmxxio::fdict

Initial value:

```

1 {
2     'atomtypes'      : nftypes,
3     'nonbond_params' : pftypes,
4     'bonds'          : bftypes,
5     'bondtypes'      : bftypes,
6     'angles'         : aftypes,
7     'angletypes'     : aftypes,
8     'dihedrals'      : dftypes,
9     'dihedraltypes'  : dftypes,
10    'virtual_sites2' : ['NONE', 'VSITE2'],
11    'virtual_sites3' : ['NONE', 'VSITE3', 'VSITE3FD', 'VSITE3FAD', 'VSITE3OUT'],
12    'virtual_sites4' : ['NONE', 'VSITE4FD', 'VSITE4FDN']
13 }
```

Section -> Interaction type dictionary.

Based on the section you're in and the integer given on the current line, this looks up the 'interaction type' - for example, within bonded interactions there are four interaction types: harmonic, G96, Morse, and quartic interactions.

Definition at line 41 of file gmxxio.py.

7.14.3.5 list forcebalance::gmxxio::nftypes = [None, 'VDW', 'VDW_BHAM']

VdW interaction function types.

Definition at line 24 of file gmxxio.py.

7.14.3.6 dictionary forcebalance::gmxxio::pdict

Interaction type -> Parameter Dictionary.

A list of supported GROMACS interaction types in force matching. The keys in this dictionary (e.g. 'BONDS', 'ANGLES') are values in the interaction type dictionary. As the program loops through the force field file, it first looks up the interaction types in 'fdict' and then goes here to do the parameter lookup by field.

Todo This needs to become more flexible because the parameter isn't always in the same field. Still need to figure out how to do this.

How about making the PDIHS less ugly?

Definition at line 64 of file gmxxio.py.

7.14.3.7 list forcebalance::gmxxio::pftypes = [None, 'VPAIR', 'VPAIR_BHAM']

Pairwise interaction function types.

Definition at line 26 of file gmxxio.py.

7.15 forcebalance::gmxxpio Namespace Reference

Classes

- class [Monomer_QTPIE](#)

Subclass of Target for monomer properties of QTPIE (implemented within gromacs WCV branch).

Functions

- def [get_monomer_properties](#)

7.15.1 Function Documentation

7.15.1.1 def forcebalance.gmxqpio.get_monomer_properties (print_stuff = 0)

Definition at line 25 of file gmxqpio.py.

Here is the call graph for this function:

7.16 forcebalance::interaction Namespace Reference

[Interaction](#) energy fitting module.

Classes

- class [Interaction](#)
Subclass of Target for fitting force fields to interaction energies.

7.16.1 Detailed Description

[Interaction](#) energy fitting module.

Author

Lee-Ping Wang

Date

05/2012

7.17 forcebalance::leastq Namespace Reference

Classes

- class [LeastSquares](#)
Subclass of Target for general least squares fitting.

Functions

- def [CheckBasis](#)
- def [LastMvals](#)

Variables

- `CHECK_BASIS` = False
- `LAST_MVALS` = None

7.17.1 Function Documentation

7.17.1.1 `def forcebalance.leastsq.CheckBasis ()`

Definition at line 21 of file `leastsq.py`.

7.17.1.2 `def forcebalance.leastsq.LastMvals ()`

Definition at line 26 of file `leastsq.py`.

7.17.2 Variable Documentation

7.17.2.1 `forcebalance::leastsq::CHECK_BASIS` = False

Definition at line 20 of file `leastsq.py`.

7.17.2.2 `forcebalance::leastsq::LAST_MVALS` = None

Definition at line 25 of file `leastsq.py`.

7.18 forcebalance::liquid Namespace Reference

Matching of liquid bulk properties.

Classes

- class `Liquid`
Subclass of Target for liquid property matching.

Functions

- `def weight_info`

7.18.1 Detailed Description

Matching of liquid bulk properties. Under development.

Author

Lee-Ping Wang

Date

04/2012

7.18.2 Function Documentation

7.18.2.1 `def forcebalance.liquid.weight_info (W, PT, N_k, verbose = True)`

Definition at line 28 of file liquid.py.

7.19 forcebalance::Mol2 Namespace Reference

Classes

- class `mol2_atom`
This is to manage `mol2` atomic lines on the form: 1 C1 5.4790 42.2880 49.5910 C.ar 1 <1> 0.0424.
- class `mol2_bond`
This is to manage `mol2` bond lines on the form: 1 1 2 ar.
- class `mol2`
This is to manage one `mol2` series of lines on the form:
- class `mol2_set`

Variables

- tuple `data = mol2_set(sys.argv[1], subset=["RNAse.xray.inh8.1QHC"])`

7.19.1 Variable Documentation

7.19.1.1 `tuple forcebalance::Mol2::data = mol2_set(sys.argv[1], subset=["RNAse.xray.inh8.1QHC"])`

Definition at line 651 of file Mol2.py.

7.20 forcebalance::mol2io Namespace Reference

`Mol2` I/O.

Classes

- class `Mol2_Reader`
Finite state machine for parsing `Mol2` force field file.

Variables

- dictionary `mol2_pdict = {'COUL':{'Atom':[1, 6:]}}`

7.20.1 Detailed Description

`Mol2` I/O. This serves as a good template for writing future force matching I/O modules for other programs because it's so simple.

Author

Lee-Ping Wang

Date

05/2012

7.20.2 Variable Documentation

7.20.2.1 dictionary forcebalance::mol2io::mol2_pdict = {'COUL': {'Atom': [1], 6: ''}}

Definition at line 18 of file mol2io.py.

7.21 forcebalance::molecule Namespace Reference

Classes

- class [MyG](#)
- class [MolfileTimestep](#)
Wrapper for the timestep C structure used in molfile plugins.
- class [Molecule](#)
Lee-Ping's general file format conversion class.

Functions

- def [getElement](#)
- def [nodematch](#)
- def [isint](#)
ONLY matches integers! If you have a decimal point? None shall pass!
- def [isfloat](#)
Matches ANY number; it can be a decimal, scientific notation, integer, or what have you.
- def [format_xyz_coord](#)
Print a line consisting of (element, x, y, z) in accordance with .xyz file format.
- def [format_gro_coord](#)
Print a line in accordance with .gro file format, with six decimal points of precision.
- def [format_xyzgen_coord](#)
Print a line consisting of (element, p, q, r, s, t, ...) where (p, q, r) are arbitrary atom-wise data (this might happen, for instance, with atomic charges)
- def [format_gro_box](#)
Print a line corresponding to the box vector in accordance with .gro file format.
- def [is_gro_coord](#)
Determines whether a line contains GROMACS data or not.
- def [is_charmm_coord](#)
Determines whether a line contains CHARMM data or not.
- def [is_gro_box](#)
Determines whether a line contains a GROMACS box vector or not.
- def [add_strip_to_mat](#)
- def [pvec](#)

- def [grouper](#)
Groups a big long iterable into groups of ten or what have you.
- def [even_list](#)
Creates a list of number sequences divided as evenly as possible.
- def [both](#)
- def [diff](#)
- def [either](#)
- def [EulerMatrix](#)
Constructs an Euler matrix from three Euler angles.
- def [ComputeOverlap](#)
Computes an 'overlap' between two molecules based on some fictitious density.
- def [AlignToDensity](#)
Computes a "overlap density" from two frames.
- def [AlignToMoments](#)
Pre-aligns molecules to 'moment of inertia'.
- def [get_rotate_translate](#)
- def [main](#)

Variables

- tuple [FrameVariableNames](#)
- tuple [AtomVariableNames](#) = set(['elem', 'partial_charge', 'atomname', 'atomtype', 'tinkersuf', 'resid', 'resname', 'qcsuf', 'qm_ghost'])
- tuple [MetaVariableNames](#) = set(['fnm', 'ftype', 'qcrems', 'qctemplate', 'charge', 'mult', 'bonds'])
- tuple [QuantumVariableNames](#) = set(['qcrems', 'qctemplate', 'charge', 'mult', 'qcsuf', 'qm_ghost'])
- [AllVariableNames](#) = [QuantumVariableNames](#)|[AtomVariableNames](#)|[MetaVariableNames](#)|[FrameVariableNames](#)
- list [Radii](#)
- list [Elements](#)
- tuple [PeriodicTable](#)
- float [bohrang](#) = 0.529177249
One bohr equals this many angstroms.
- tuple [splitter](#) = re.compile(r'(\s+|\S+)')

7.21.1 Function Documentation

7.21.1.1 def forcebalance.molecule.add_strip_to_mat(mat, strip)

Definition at line 391 of file molecule.py.

Here is the call graph for this function:

7.21.1.2 `def forcebalance.molecule.AlignToDensity (elem, xyz1, xyz2, binary=False)`

Computes a "overlap density" from two frames.

This function can be called by AlignToMoments to get rid of inversion problems

Definition at line 489 of file molecule.py.

7.21.1.3 `def forcebalance.molecule.AlignToMoments (elem, xyz1, xyz2=None)`

Pre-aligns molecules to 'moment of inertia'.

If xyz2 is passed in, it will assume that xyz1 is already aligned to the moment of inertia, and it simply does 180-degree rotations to make sure nothing is inverted.

Definition at line 501 of file molecule.py.

Here is the call graph for this function:

**7.21.1.4** `def forcebalance.molecule.both (A, B, key)`

Definition at line 429 of file molecule.py.

7.21.1.5 `def forcebalance.molecule.ComputeOverlap (theta, elem, xyz1, xyz2)`

Computes an 'overlap' between two molecules based on some fictitious density.

Good for fine-tuning alignment but gets stuck in local minima.

Definition at line 472 of file molecule.py.

Here is the call graph for this function:

**7.21.1.6** `def forcebalance.molecule.diff (A, B, key)`

Definition at line 432 of file molecule.py.

7.21.1.7 `def forcebalance.molecule.either (A, B, key)`

Definition at line 435 of file molecule.py.

7.21.1.8 `def forcebalance.molecule.EulerMatrix (T1, T2, T3)`

Constructs an Euler matrix from three Euler angles.

Definition at line 444 of file molecule.py.

Here is the call graph for this function:

7.21.1.9 def forcebalance.molecule.even_list (totlen, splitsize)

Creates a list of number sequences divided as evenly as possible.

Definition at line 411 of file molecule.py.

Here is the call graph for this function:

7.21.1.10 def forcebalance.molecule.format_gro_box (xyz)

Print a line corresponding to the box vector in accordance with .gro file format.

Parameters

| | | |
|----|-----|---|
| in | xyz | A 3-element or 9-element array containing the box vectors |
|----|-----|---|

Definition at line 345 of file molecule.py.

Here is the call graph for this function:

7.21.1.11 def forcebalance.molecule.format_gro_coord (resid, resname, aname, seqno, xyz)

Print a line in accordance with .gro file format, with six decimal points of precision.

Parameters

| | | |
|----|----------------|---|
| in | <i>resid</i> | The number of the residue that the atom belongs to |
| in | <i>resname</i> | The name of the residue that the atom belongs to |
| in | <i>aname</i> | The name of the atom |
| in | <i>seqno</i> | The sequential number of the atom |
| in | <i>xyz</i> | A 3-element array containing x, y, z coordinates of that atom |

Definition at line 324 of file molecule.py.

Here is the call graph for this function:

```
7.21.1.12 def forcebalance.molecule.format xyz coord( element, xyz, tinker=False )
```

Print a line consisting of (element, x, y, z) in accordance with .xyz file format.

Parameters

| | | |
|----|----------------|---|
| in | <i>element</i> | A chemical element of a single atom |
| in | <i>xyz</i> | A 3-element array containing x, y, z coordinates of that atom |

Definition at line 308 of file molecule.py.

Here is the call graph for this function:

```
7.21.1.13 def forcebalance.molecule.format_xyzgen_coord ( element, xyzgen )
```

Print a line consisting of (element, p, q, r, s, t, ...) where (p, q, r) are arbitrary atom-wise data (this might happen, for instance, with atomic charges)

Parameters

| | | |
|----|----------------|---|
| in | <i>element</i> | A chemical element of a single atom |
| in | <i>xyzgen</i> | A N-element array containing data for that atom |

Definition at line 336 of file molecule.py.

Here is the call graph for this function:

7.21.1.14 def forcebalance.molecule.get_rotate_translate (matrix1, matrix2)

Definition at line 524 of file molecule.py.

7.21.1.15 def forcebalance.molecule.getElement (mass)

Definition at line 190 of file molecule.py.

7.21.1.16 def forcebalance.molecule.grouper (n, iterable)

Groups a big long iterable into groups of ten or what have you.

Definition at line 405 of file molecule.py.

7.21.1.17 def forcebalance.molecule.is_charmm_coord (line)

Determines whether a line contains CHARMM data or not.

Parameters

| | | |
|-----------|-------------|-----------------------|
| <i>in</i> | <i>line</i> | The line to be tested |
|-----------|-------------|-----------------------|

Definition at line 369 of file molecule.py.

Here is the call graph for this function:

7.21.1.18 def forcebalance.molecule.is_gro_box (line)

Determines whether a line contains a GROMACS box vector or not.

Parameters

| | | |
|-----------|-------------|-----------------------|
| <i>in</i> | <i>line</i> | The line to be tested |
|-----------|-------------|-----------------------|

Definition at line 382 of file molecule.py.

Here is the call graph for this function:

7.21.1.19 `def forcebalance.molecule.is_gro_coord (line)`

Determines whether a line contains GROMACS data or not.

Parameters

| | | |
|-----------------|-------------------|-----------------------|
| <code>in</code> | <code>line</code> | The line to be tested |
|-----------------|-------------------|-----------------------|

Definition at line 354 of file molecule.py.

Here is the call graph for this function:

7.21.1.20 `def forcebalance.molecule.isfloat (word)`

Matches ANY number; it can be a decimal, scientific notation, integer, or what have you.

Definition at line 242 of file molecule.py.

7.21.1.21 `def forcebalance.molecule.isint (word)`

ONLY matches integers! If you have a decimal point? None shall pass!

Definition at line 237 of file molecule.py.

Here is the call graph for this function:

7.21.1.22 `def forcebalance.molecule.main ()`

Definition at line 2286 of file molecule.py.

7.21.1.23 `def forcebalance.molecule.nodematch (node1, node2)`

Definition at line 231 of file molecule.py.

Here is the call graph for this function:

7.21.1.24 `def forcebalance.molecule.pvec (vec)`

Definition at line 400 of file molecule.py.

7.21.2 Variable Documentation

7.21.2.1 `forcebalance::molecule::AllVariableNames = QuantumVariableNames|AtomVariableNames|Meta-VariableNames|FrameVariableNames`

Definition at line 139 of file molecule.py.

7.21.2.2 `tuple forcebalance::molecule::AtomVariableNames = set(['elem', 'partial_charge', 'atomname', 'atomtype', 'tinkersuf', 'resid', 'resname', 'qcsuf', 'qm_ghost'])`

Definition at line 122 of file molecule.py.

7.21.2.3 `float forcebalance::molecule::bohrang = 0.529177249`

One bohr equals this many angstroms.

Definition at line 229 of file molecule.py.

7.21.2.4 `list forcebalance::molecule::Elements`

Initial value:

```
1  [ "None", 'H', 'He',
```

```

2         'Li','Be','B','C','N','O','F','Ne',
3         'Na','Mg','Al','Si','P','S','Cl','Ar',

12     2.60, 2.21, 2.15, 2.06, 2.00, 1.96, 1.90, 1.87, 1.80, 1.69]

```

Definition at line 151 of file molecule.py.

7.21.2.10 tuple forcebalance::molecule::splitter = re.compile(r'(\s+|\S+)

Definition at line 246 of file molecule.py.

7.22 forcebalance::moments Namespace Reference

Multipole moment fitting module.

Classes

- class [Moments](#)

Subclass of Target for fitting force fields to multipole moments (from experiment or theory).

7.22.1 Detailed Description

Multipole moment fitting module.

Author

Lee-Ping Wang

Date

09/2012

7.23 forcebalance::nifty Namespace Reference

Nifty functions, intended to be imported by any module within ForceBalance.

Classes

- class [Pickler_LP](#)
A subclass of the python Pickler that implements pickling of `_ElementTree` types.
- class [Unpickler_LP](#)
A subclass of the python Unpickler that implements unpickling of `_ElementTree` types.

Functions

- def [pvec1d](#)
Printout of a 1-D vector.
- def [pmat2d](#)
Printout of a 2-D matrix.
- def [encode](#)
- def [segments](#)
- def [commadash](#)
- def [uncommadash](#)
- def [printcool](#)
Cool-looking printout for slick formatting of output.
- def [printcool_dictionary](#)
See documentation for printcool; this is a nice way to print out keys/values in a dictionary.
- def [isint](#)
ONLY matches integers! If you have a decimal point? None shall pass!
- def [isfloat](#)
Matches ANY number; it can be a decimal, scientific notation, what have you CAUTION - this will also match an integer.
- def [isdecimal](#)
Matches things with a decimal only; see isint and isfloat.
- def [floatornan](#)
Returns a big number if we encounter NaN.
- def [col](#)
Given any list, array, or matrix, return a 1-column matrix.
- def [row](#)
Given any list, array, or matrix, return a 1-row matrix.
- def [flat](#)
Given any list, array, or matrix, return a single-index array.
- def [orthogonalize](#)

- Given two vectors vec1 and vec2, project out the component of vec1 that is along the vec2-direction.*

 - def [invert_svd](#)

Invert a matrix using singular value decomposition.
- def [get_least_squares](#)
- def [lp_dump](#)
- Use this instead of pickle.dump for pickling anything that contains _ElementTree types.*

 - def [lp_load](#)

Use this instead of pickle.load for unpickling anything that contains _ElementTree types.
- def [getWorkQueue](#)
- def [getWQIds](#)
- def [createWorkQueue](#)
- def [queue_up](#)
- Submit a job to the Work Queue.*

 - def [queue_up_src_dest](#)

Submit a job to the Work Queue.
- def [wq_wait1](#)
- This function waits ten seconds to see if a task in the Work Queue has finished.*

 - def [wq_wait](#)

This function waits until the work queue is completely empty.
- def [GoInto](#)
- def [allsplit](#)
- def [Leave](#)
- def [MissingFileInspection](#)
- def [LinkFile](#)
- def [CopyFile](#)
- def [link_dir_contents](#)
- def [remove_if_exists](#)
- Remove the file if it exists (doesn't return an error).*

 - def [which](#)
- def [warn_press_key](#)
- def [warn_once](#)
- Prints a warning but will only do so once in a given run.*

 - def [concurrent_map](#)

Similar to the builtin function map().
- def [multiopen](#)
- This function be given any of several variable types (single file name, file object, or list of lines, or a list of the above) and give a list of files:*

Variables

- float [kb](#) = 0.0083144100163
- Boltzmann constant.*
- float [eqcgmX](#) = 2625.5002
- Q-Chem to GMX unit conversion for energy.*
- float [fqcgmX](#) = 49621.9
- Q-Chem to GMX unit conversion for force.*
- float [bohrang](#) = 0.529177249
- One bohr equals this many angstroms.*

- string `XMLFILE` = 'x'
Pickle uses 'flags' to pickle and unpickle different variable types.
- `WORK_QUEUE` = None
- tuple `WQIDS` = defaultdict(list)
- list `specific_lst`
- tuple `specific_dct` = dict(list(itertools.chain(*[[[j,i[1]] for j in i[0]] for i in specific_lst]])))

7.23.1 Detailed Description

Nifty functions, intended to be imported by any module within ForceBalance. Table of Contents:

- I/O formatting
- Math: Variable manipulation, linear algebra, least squares polynomial fitting
- Pickle: Expand Python's own pickle to accommodate writing XML etree objects
- Commands for submitting things to the Work Queue
- Various file and process management functions
- Development stuff (not commonly used)

Named after the mighty Sniffy Handy Nifty (King Sniffy)

7.23.2 Function Documentation

7.23.2.1 `def forcebalance.nifty.allsplit (Dir)`

Definition at line 610 of file nifty.py.

Here is the call graph for this function:

7.23.2.2 def forcebalance.nifty.col (vec)

Given any list, array, or matrix, return a 1-column matrix.

Input: vec = The input vector that is to be made into a column

Output: A column matrix

Definition at line 266 of file nifty.py.

Here is the call graph for this function:

7.23.2.3 def forcebalance.nifty.commadash (/)

Definition at line 77 of file nifty.py.

Here is the call graph for this function:

7.23.2.4 def forcebalance.nifty.concurrent_map (func, data)

Similar to the builtin function map().

But spawn a thread for each argument and apply 'func' concurrently.

Note: unlike map(), we cannot take an iterable argument. 'data' should be an indexable sequence.

Definition at line 801 of file nifty.py.

7.23.2.5 def forcebalance.nifty.CopyFile (src, dest)

Definition at line 658 of file nifty.py.

Here is the call graph for this function:

7.23.2.6 def forcebalance.nifty.createWorkQueue (wq_port)

Definition at line 475 of file nifty.py.

7.23.2.7 def forcebalance.nifty.encode (*l*)

Definition at line 68 of file nifty.py.

Here is the call graph for this function:

7.23.2.8 def forcebalance.nifty.flat (*vec*)

Given any list, array, or matrix, return a single-index array.

Parameters

| | | |
|-----------|------------|--------------------------|
| <i>in</i> | <i>vec</i> | The data to be flattened |
|-----------|------------|--------------------------|

Returns

answer The flattened data

Definition at line 285 of file nifty.py.

Here is the call graph for this function:

7.23.2.9 def forcebalance.nifty.floatornan (*word*)

Returns a big number if we encounter NaN.

Parameters

| | | |
|-----------|-------------|----------------------------|
| <i>in</i> | <i>word</i> | The string to be converted |
|-----------|-------------|----------------------------|

Returns

answer The string converted to a float; if not a float, return 1e10

Todo I could use suggestions for making this better.

Definition at line 248 of file nifty.py.

Here is the call graph for this function:

7.23.2.10 def forcebalance.nifty.get_least_squares (x, y, w=None, thresh=1e-12)

```

|-----|
| 1 (x0) (x0)^2 (x0)^3 |
| 1 (x1) (x1)^2 (x1)^3 |
| 1 (x2) (x2)^2 (x2)^3 |
| 1 (x3) (x3)^2 (x3)^3 |
| 1 (x4) (x4)^2 (x4)^3 |
|-----|

```

Parameters

| | | |
|-----|-------------|---|
| in | <i>X</i> | (2-D array) An array of X-values (see above) |
| in | <i>Y</i> | (array) An array of Y-values (only used in getting the least squares coefficients) |
| in | <i>w</i> | (array) An array of weights, hopefully normalized to one. |
| out | <i>Beta</i> | The least-squares coefficients |
| out | <i>Hat</i> | The hat matrix that takes linear combinations of data y-values to give fitted y-values (weights) |
| out | <i>yfit</i> | The fitted y-values |
| out | <i>MPPI</i> | The Moore-Penrose pseudoinverse (multiply by Y to get least-squares coefficients, multiply by dY/dk to get derivatives of least-squares coefficients) |

Definition at line 353 of file nifty.py.

Here is the call graph for this function:

7.23.2.11 def forcebalance.nifty.getWorkQueue ()

Definition at line 467 of file nifty.py.

7.23.2.12 `def forcebalance.nifty.getWQIds ()`

Definition at line 471 of file nifty.py.

7.23.2.13 `def forcebalance.nifty.GoInto (Dir)`

Definition at line 602 of file nifty.py.

7.23.2.14 `def forcebalance.nifty.invert_svd (X, thresh = 1e-12)`

Invert a matrix using singular value decomposition.

Parameters

| | | |
|-----------|---------------|--|
| <i>in</i> | <i>X</i> | The matrix to be inverted |
| <i>in</i> | <i>thresh</i> | The SVD threshold; eigenvalues below this are not inverted but set to zero |

Returns

Xt The inverted matrix

Definition at line 312 of file nifty.py.

Here is the call graph for this function:

7.23.2.15 `def forcebalance.nifty.isdecimal (word)`

Matches things with a decimal only; see `isint` and `isfloat`.

Parameters

| | | |
|-----------|-------------|---|
| <i>in</i> | <i>word</i> | String (for instance, '123', '153.0', '2.', '-354') |
|-----------|-------------|---|

Returns

answer Boolean which specifies whether the string is a number with a decimal point

Definition at line 238 of file nifty.py.

Here is the call graph for this function:

**7.23.2.16 def forcebalance.nifty.isfloat (word)**

Matches ANY number; it can be a decimal, scientific notation, what have you CAUTION - this will also match an integer.

Parameters

| | | |
|----|------|---|
| in | word | String (for instance, '123', '153.0', '2.', '-354') |
|----|------|---|

Returns

answer Boolean which specifies whether the string is any number

Definition at line 228 of file nifty.py.

Here is the call graph for this function:

**7.23.2.17 def forcebalance.nifty.isint (word)**

ONLY matches integers! If you have a decimal point? None shall pass!

Parameters

| | | |
|----|------|---|
| in | word | String (for instance, '123', '153.0', '2.', '-354') |
|----|------|---|

Definition at line 450 of file nifty.py.

Here is the call graph for this function:

7.23.2.23 def forcebalance.nifty.MissingFileInspection (*fnm*)

Definition at line 637 of file nifty.py.

Here is the call graph for this function:

7.23.2.24 def forcebalance.nifty.multiopen (*arg*)

This function be given any of several variable types (single file name, file object, or list of lines, or a list of the above) and give a list of files:

```
[file1, file2, file3 ... ]
```

each of which can then be iterated over:

```
[[file1_line1, file1_line2 ... ], [file2_line1, file2_line2 ... ]]
```

Definition at line 831 of file nifty.py.

7.23.2.25 def forcebalance.nifty.orthogonalize (*vec1*, *vec2*)

Given two vectors `vec1` and `vec2`, project out the component of `vec1` that is along the `vec2`-direction.

Parameters

| | | |
|----|-------------|---|
| in | <i>vec1</i> | The projectee (i.e. output is some modified version of <code>vec1</code>) |
| in | <i>vec2</i> | The projector (component subtracted out from <code>vec1</code> is parallel to this) |

Returns

answer A copy of `vec1` but with the `vec2`-component projected out.

Definition at line 299 of file nifty.py.

7.23.2.26 `def forcebalance.nifty.pmat2d (mat2d, precision = 1)`

Printout of a 2-D matrix.

Parameters

| | | |
|----|--------------|--------------|
| in | <i>mat2d</i> | a 2-D matrix |
|----|--------------|--------------|

Definition at line 61 of file nifty.py.

Here is the call graph for this function:

7.23.2.27 `def forcebalance.nifty.printcool (text, sym = "#", bold = False, color = 2, ansi = None, bottom = '-', minwidth = 50, center = True)`

Cool-looking printout for slick formatting of output.

Parameters

| | | |
|----|-----------------|--|
| in | <i>text</i> | The string that the printout is based upon. This function will print out the string, ANSI-colored and enclosed in the symbol for example: ##### ### I am cool ### ##### |
| in | <i>sym</i> | The surrounding symbol |
| in | <i>bold</i> | Whether to use bold print |
| in | <i>color</i> | The ANSI color: 1 red 2 green 3 yellow 4 blue 5 magenta 6 cyan 7 white |
| in | <i>bottom</i> | The symbol for the bottom bar |
| in | <i>minwidth</i> | The minimum width for the box, if the text is very short then we insert the appropriate number of padding spaces |

Returns

bar The bottom bar is returned for the user to print later, e.g. to mark off a 'section'

Definition at line 150 of file nifty.py.

Here is the call graph for this function:

```
7.23.2.28 def forcebalance.nifty.printcool_dictionary ( Dict, title = "General options", bold = False, color =
2, keywidth = 25, topwidth = 50, center = True, leftpad = 0 )
```

Here is the call graph for this function:

7.23.2.31 `def forcebalance.nifty.queue_up_src_dest (wq, command, input_files, output_files, tgt=None, verbose = True)`

Submit a job to the Work Queue.

This function is a bit fancier in that we can explicitly specify where the input files come from, and where the output files go to.

Parameters

| | | |
|----|---------------------|--|
| in | <i>wq</i> | (Work Queue Object) |
| in | <i>command</i> | (string) The command to run on the remote worker. |
| in | <i>input_files</i> | (list of 2-tuples) A list of local and remote locations of the input files. |
| in | <i>output_files</i> | (list of 2-tuples) A list of local and remote locations of the output files. |

Definition at line 524 of file nifty.py.

7.23.2.32 `def forcebalance.nifty.remove_if_exists (fnm)`

Remove the file if it exists (doesn't return an error).

Definition at line 679 of file nifty.py.

7.23.2.33 `def forcebalance.nifty.row (vec)`

Given any list, array, or matrix, return a 1-row matrix.

Parameters

| | | |
|----|------------|--|
| in | <i>vec</i> | The input vector that is to be made into a row |
|----|------------|--|

Returns

answer A row matrix

Definition at line 276 of file nifty.py.

Here is the call graph for this function:

```
7.23.2.34 def forcebalance.nifty.segments ( e )
```

Definition at line 71 of file nifty.py.

Here is the call graph for this function:

```
7.23.2.35 def forcebalance.nifty.uncommadash ( s )
```

Definition at line 87 of file nifty.py.

Here is the call graph for this function:

```
7.23.2.36 def forcebalance.nifty.warn_once( warning, warnhash=None )
```

Prints a warning but will only do so once in a given run.

Definition at line 777 of file nifty.py.

Here is the call graph for this function:

```
7.23.2.37 def forcebalance.nifty.warn_press_key ( warning )
```

Definition at line 760 of file nifty.py.

Here is the call graph for this function:

7.23.2.38 `def forcebalance.nifty.which (fnm)`

Definition at line 683 of file nifty.py.

Here is the call graph for this function:

7.23.2.39 `def forcebalance.nifty.wq_wait (wq, verbose=False)`

This function waits until the work queue is completely empty.

Definition at line 595 of file nifty.py.

Here is the call graph for this function:

7.23.2.40 `def forcebalance.nifty.wq_wait1 (wq, wait.time=10, verbose=False)`

This function waits ten seconds to see if a task in the Work Queue has finished.

Definition at line 545 of file nifty.py.

Here is the call graph for this function:

7.23.3 Variable Documentation

7.23.3.1 `float forcebalance::nifty::bohrang = 0.529177249`

One bohr equals this many angstroms.

Definition at line 40 of file nifty.py.

7.23.3.2 `float forcebalance::nifty::eqcgmx = 2625.5002`

Q-Chem to GMX unit conversion for energy.

Definition at line 36 of file nifty.py.

7.23.3.3 float forcebalance::nifty::fqcgmx = 49621.9

Q-Chem to GMX unit conversion for force.

Definition at line 38 of file nifty.py.

7.23.3.4 float forcebalance::nifty::kb = 0.0083144100163

Boltzmann constant.

Definition at line 34 of file nifty.py.

7.23.3.5 tuple forcebalance::nifty::specific_dct = dict(list(itertools.chain(*[[[j,i[1]] for j in i[0]] for i in specific_lst]]))

Definition at line 635 of file nifty.py.

7.23.3.6 list forcebalance::nifty::specific_lst

Initial value:

```
1 [(['mdrun','grompp','trjconv','g_energy','g_traj'], "Make sure to install
   GROMACS and add it to your path (or set the gmxpath option)"),
2   (['force.mdin', 'stage.leap'], "This file is needed for setting
   up AMBER force matching targets"),
3   (['conf.pdb', 'mono.pdb'], "This file is needed for setting up
   OpenMM condensed phase property targets"),
4   (['liquid.xyz', 'liquid.key', 'mono.xyz', 'mono.key'], "This
   file is needed for setting up OpenMM condensed phase property targets"),
5   (['dynamic', 'analyze', 'minimize', 'testgrad', 'vibrate', '
   optimize', 'polarize', 'superpose'], "Make sure to install TINKER and add it to
   your path (or set the tinkerspath option)"),
6   (['runcuda.sh', 'npt.py', 'npt_tinker.py'], "This file belongs
   in the ForceBalance source directory, not sure why it is missing"),
7   (['input.xyz'], "This file is needed for TINKER molecular
   property targets"),
8   (['.*key$', '.*xyz$'], "I am guessing this file is probably
   needed by TINKER"),
9   (['.*gro$', '.*top$', '.*itp$', '.*mdp$', '.*ndx$'], "I am
   guessing this file is probably needed by GROMACS")
10 ]
```

Definition at line 623 of file nifty.py.

7.23.3.7 forcebalance::nifty::WORK_QUEUE = None

Definition at line 462 of file nifty.py.

7.23.3.8 tuple forcebalance::nifty::WQIDS = defaultdict(list)

Definition at line 465 of file nifty.py.

7.23.3.9 string forcebalance::nifty::XMLFILE = 'x'

Pickle uses 'flags' to pickle and unpickle different variable types.

Here we use the letter 'x' to signify that the variable type is an XML file.

Definition at line 391 of file nifty.py.

7.24 forcebalance::objective Namespace Reference

ForceBalance objective function.

Classes

- class [Objective](#)
Objective function.
- class [Penalty](#)
Penalty functions for regularizing the force field optimizer.

Variables

- dictionary [Implemented_Targets](#)
The table of implemented Targets.
- list [Letters](#) = ['X','G','H']
This is the canonical lettering that corresponds to : objective function, gradient, Hessian.

7.24.1 Detailed Description

ForceBalance objective function.

7.24.2 Variable Documentation

7.24.2.1 dictionary forcebalance::objective::Implemented_Targets

Initial value:

```

1 {
2   'ABINITIO_GMX':AbInitio_GMX,

16  'MOMENTS_TINKER':Moments_TINKER,
17  'MONOMER_QTPIE':Monomer_QTPIE,
18  }

```

The table of implemented Targets.

Definition at line 67 of file objective.py.

7.24.2.2 list forcebalance::objective::Letters = ['X','G','H']

This is the canonical lettering that corresponds to : objective function, gradient, Hessian.

Definition at line 87 of file objective.py.

7.25 forcebalance::openmmio Namespace Reference

OpenMM input/output.

Classes

- class [OpenMM_Reader](#)
Class for parsing OpenMM force field files.
- class [Liquid_OpenMM](#)
- class [AbInitio_OpenMM](#)
Subclass of AbInitio for force and energy matching using OpenMM.
- class [Interaction_OpenMM](#)
Subclass of Target for interaction matching using OpenMM.

Functions

- def [get_dipole](#)
Return the current dipole moment in Debye.
- def [ResetVirtualSites](#)
Given a set of OpenMM-compatible positions and a System object, compute the correct virtual site positions according to the System.
- def [CopyAmoebaBondParameters](#)
- def [CopyAmoebaOutOfPlaneBendParameters](#)
- def [CopyAmoebaAngleParameters](#)
- def [CopyAmoebaInPlaneAngleParameters](#)
- def [CopyAmoebaVdwParameters](#)
- def [CopyAmoebaMultipoleParameters](#)
- def [CopyHarmonicBondParameters](#)
- def [CopyHarmonicAngleParameters](#)
- def [CopyPeriodicTorsionParameters](#)
- def [CopyNonbondedParameters](#)
- def [do_nothing](#)
- def [CopySystemParameters](#)
Copy parameters from one system (i.e.
- def [UpdateSimulationParameters](#)

Variables

- dictionary [suffix_dict](#)
- string [pdict](#) = "XML_Override"
pdict is a useless variable if the force field is XML.

7.25.1 Detailed Description

OpenMM input/output.

Author

Lee-Ping Wang

04/2012

7.25.2 Function Documentation

7.25.2.1 def forcebalance.openmmio.CopyAmoebaAngleParameters (src, dest)

Definition at line 109 of file openmmio.py.

Here is the call graph for this function:

7.25.2.2 def forcebalance.openmmio.CopyAmoebaBondParameters (src, dest)

Definition at line 95 of file openmmio.py.

Here is the call graph for this function:

7.25.2.3 def forcebalance.openmmio.CopyAmoebaInPlaneAngleParameters (src, dest)

Definition at line 118 of file openmmio.py.

Here is the call graph for this function:

7.25.2.4 def forcebalance.openmmio.CopyAmoebaMultipoleParameters (src, dest)

Definition at line 131 of file openmmio.py.

Here is the call graph for this function:

7.25.2.5 def forcebalance.openmmio.CopyAmoebaOutOfPlaneBendParameters (src, dest)

Definition at line 101 of file openmmio.py.

Here is the call graph for this function:

7.25.2.6 def forcebalance.openmmio.CopyAmoebaVdwParameters (src, dest)

Definition at line 127 of file openmmio.py.

Here is the call graph for this function:

7.25.2.7 def forcebalance.openmmio.CopyHarmonicAngleParameters (src, dest)

Definition at line 139 of file openmmio.py.

Here is the call graph for this function:

7.25.2.8 def forcebalance.openmmio.CopyHarmonicBondParameters (src, dest)

Definition at line 135 of file openmmio.py.

Here is the call graph for this function:

7.25.2.9 def forcebalance.openmmio.CopyNonbondedParameters (src, dest)

Definition at line 147 of file openmmio.py.

Here is the call graph for this function:

7.25.2.10 def forcebalance.openmmio.CopyPeriodicTorsionParameters (src, dest)

Definition at line 143 of file openmmio.py.

Here is the call graph for this function:

7.25.2.11 def forcebalance.openmmio.CopySystemParameters (src, dest)

Copy parameters from one system (i.e.

that which is created by a new force field) sto another system (i.e. the one stored inside the Target object). DANGER: These need to be implemented manually!!!

Definition at line 161 of file openmmio.py.

Here is the call graph for this function:

7.25.2.12 def forcebalance.openmmio.do_nothing (src, dest)

Definition at line 154 of file openmmio.py.

7.25.2.13 def forcebalance.openmmio.get_dipole (simulation, q=None, positions=None)

Return the current dipole moment in Debye.

Note that this quantity is meaningless if the system carries a net charge.

Definition at line 34 of file openmmio.py.

Here is the call graph for this function:

7.25.2.14 def forcebalance.openmmio.ResetVirtualSites (positions, system)

Given a set of OpenMM-compatible positions and a System object, compute the correct virtual site positions according to the System.

Definition at line 64 of file openmmio.py.

Here is the call graph for this function:

7.25.2.15 def forcebalance.openmmio.UpdateSimulationParameters (src_system, dest_simulation)

Definition at line 180 of file openmmio.py.

7.25.3 Variable Documentation

7.25.3.1 string forcebalance::openmmio::pdict = "XML_Override"

pdict is a useless variable if the force field is XML.

Definition at line 205 of file openmmio.py.

7.25.3.2 dictionary forcebalance::openmmio::suffix_dict

Initial value:

```

7.27 forcebalance::parser Namespace Reference

Input file parser for ForceBalance jobs.

Functions

- def [read_mvals](#)
- def [read_pvals](#)
- def [read_priors](#)
- def [read_internals](#)
- def [printsection](#)
 - Print out a section of the input file in a parser-compliant and readable format.*
- def [parse_inputs](#)
 - Parse through the input file and read all user-supplied options.*

Variables

- dictionary [gen_opts_types](#)
 - Default general options.*
- dictionary [tgt_opts_types](#)

Default fitting target options.

- dictionary `gen_opts_defaults` = {}

Default general options - basically a collapsed version of gen_opts_types.

- dictionary `subdict` = {}
- dictionary `tgt_opts_defaults` = {}

Default target options - basically a collapsed version of tgt_opts_types.

- dictionary `bkwd` = {"simtype" : "type"}

Option maps for maintaining backward compatibility.

- list `mainsections` = ["SIMULATION", "TARGET", "OPTIONS", "END", "NONE"]

Listing of sections in the input file.

- dictionary `ParsTab`

ParsTab that refers to subsection parsers.

7.27.1 Detailed Description

Input file parser for ForceBalance jobs. Additionally, the location for all default options.

Although I will do my best to write good documentation, for many programs the input parser becomes the most up-to-date source for documentation. So this is a great place to write lots of comments for those who implement new functionality.

There are two types of sections for options - GENERAL and TARGET. Since there can be many fitting targets within a single job (i.e. we may wish to fit water trimers and hexamers, which constitutes two fitting targets) the input is organized into sections, like so:

```
$options
gen_option_1 Big
gen_option_2 Mao
$target
tgt_option_1 Sniffy
tgt_option_2 Schmao
$target
tgt_option_1 Nifty
tgt_option_2 Jiffy
$end
```

In this case, two sets of target options are generated in addition to the general option.

(Note: "Target" used to be called "Simulation". Backwards compatibility is maintained.)

Each option is meant to be parsed as a certain variable type.

- String option values are read in directly; note that only the first two words in the line are processed
- Some strings are capitalized when they are read in; this is mainly for function tables like OptTab and TgtTab
- List option types will pick up all of the words on the line and use them as values, plus if the option occurs more than once it will aggregate all of the values.
- Integer and float option types are read in a pretty straightforward way
- Boolean option types are always set to true, unless the second word is '0', 'no', or 'false' (not case sensitive)

- Section option types are meant to treat more elaborate inputs, such as the user pasting in output parameters from a previous job as input, or a specification of internal coordinate system. I imagine that for every section type I would have to write my own parser. Maybe a ParsTab of parsing functions would work. :)

To add a new option, simply add it to the dictionaries below and give it a default value if desired. If you add an entirely new type, make sure to implement the interpretation of that type in the `parse_inputs` function.

7.27.2 Function Documentation

```
7.27.2.1 def forcebalance.parser.parse_inputs ( input_file=None )
```

Parse through the input file and read all user-supplied options.

This is usually the first thing that happens when an executable script is called. Our parser first loads the default options, and then updates these options as it encounters keywords.

Each keyword corresponds to a variable type; each variable type (e.g. string, integer, float, boolean) is treated differently. For more elaborate inputs, there is a 'section' variable type.

There is only one set of general options, but multiple sets of target options. Each target has its own section delimited by the *\$target* keyword, and we build a list of target options.

Parameters

| | | |
|----|-------------------|-----------------------------|
| in | <i>input file</i> | The name of the input file. |
|----|-------------------|-----------------------------|

Returns

options General options.

`tgt_opts` List of fitting target options.

Todo Implement internal coordinates.

Implement sampling correction.

Implement charge groups.

Definition at line 371 of file parser.py.

Here is the call graph for this function:

Here is the call graph for this function:

7.27.3 Variable Documentation

7.27.3.1 dictionary forcebalance::parser::bkwd = {"simtype" : "type"}

Option maps for maintaining backward compatibility.

Definition at line 218 of file parser.py.

7.27.3.2 dictionary forcebalance::parser::gen_opts_defaults = {}

Default general options - basically a collapsed veresion of `gen_opts_types`.

Definition at line 202 of file parser.py.

7.27.3.3 dictionary forcebalance::parser::gen_opts_types

Default general options.

Note that the documentation is included in part of the key; this will aid in automatic doc-extraction. :) In the 5-tuple we have: Default value, priority (larger number means printed first), short docstring, description of scope, list of filter strings for pulling out pertinent targets (MakeInputFile.py)

Definition at line 62 of file parser.py.

7.27.3.4 list forcebalance::parser::mainsections = ["SIMULATION","TARGET","OPTIONS","END","NONE"]

Listing of sections in the input file.

Definition at line 221 of file parser.py.

7.27.3.5 dictionary forcebalance::parser::ParsTab

Initial value:

```
1 {"read_mvals" : read_mvals,
```

```
2         "read_pvals" : read_pvals,  
3         "priors"      : read_priors,  
4         "internal"    : read_internals  
5     }
```

ParsTab that refers to subsection parsers.

Definition at line 252 of file parser.py.

7.27.3.6 dictionary forcebalance::parser::subdict = {}

Definition at line 204 of file parser.py.

7.27.3.7 dictionary forcebalance::parser::tgt_opts_defaults = {}

Default target options - basically a collapsed version of tgt_opts_types.

Definition at line 210 of file parser.py.

7.27.3.8 dictionary forcebalance::parser::tgt_opts_types

Default fitting target options.

Definition at line 123 of file parser.py.

7.28 forcebalance::psi4io Namespace Reference

PSI4 force field input/output.

Classes

- class [GBS_Reader](#)
Interaction type -> Parameter Dictionary.
- class [THCDF_Psi4](#)
- class [Grid_Reader](#)
Finite state machine for parsing DVR grid files.
- class [RDVR3_Psi4](#)
Subclass of Target for R-DVR3 grid fitting.

7.28.1 Detailed Description

PSI4 force field input/output. This serves as a good template for writing future force matching I/O modules for other programs because it's so simple.

7.32.1 Detailed Description

TINKER input/output. This serves as a good template for writing future force matching I/O modules for other programs because it's so simple.

Author

Lee-Ping Wang

Date

01/2012

7.32.2 Function Documentation

7.32.2.1 `def forcebalance.tinkerio.modify_key (src, in_dict)`

Performs in-place modification of a TINKER .key file.

The input dictionary contains key:value pairs such as "polarization direct". If the key exists in the TINKER file, then that line is modified such that it contains the value in the dictionary. Note that this "key" is not to be confused with the .key extension in the TINKER file that we're modifying.

Sometimes keys like 'archive' do not have a value, in which case the dictionary should contain a None value or a blank space.

If the key doesn't exist in the TINKER file, then the key:value pair will be printed at the end.

Parameters

| | | |
|-----------|----------------|---|
| <i>in</i> | <i>src</i> | Name of the TINKER file to be modified. |
| <i>in</i> | <i>in_dict</i> | Dictionary containing key-value pairs used to modify the TINKER file. |

Definition at line 199 of file tinkerio.py.

7.32.2.2 `def forcebalance.tinkerio.write_key_with_prm (src, dest, prmfnm=None, fobj=None)`

Copies a TINKER .key file but changes the parameter keyword as necessary to reflect the ForceBalance settings.

Definition at line 143 of file tinkerio.py.

Here is the call graph for this function:

8 Class Documentation

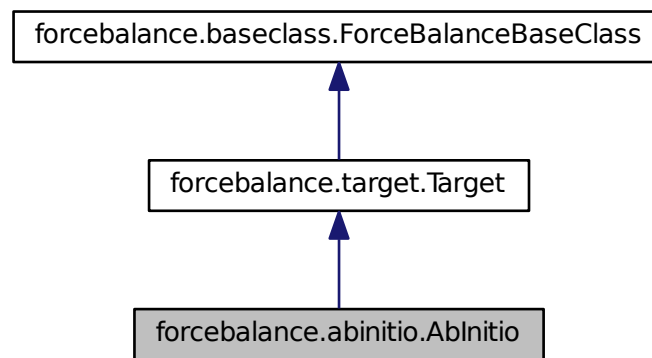

8.1 forcebalance.abinitio.AbInitio Class Reference

Subclass of Target for fitting force fields to ab initio data.

Inheritance diagram for forcebalance.abinitio.AbInitio:

Collaboration diagram for forcebalance.abinitio.AbInitio:

Public Member Functions

- `def __init__`
Initialization; define a few core concepts.
- `def read_topology`
- `def build_invdist`
- `def compute_netforce_torque`
- `def read_reference_data`

Read the reference ab initio data from a file such as qdata.txt.

- def [prepare_temp_directory](#)

Prepare the temporary directory, by default does nothing.

- def [indicate](#)
- def [energy_force_transformer_all](#)
- def [energy_force_transformer](#)
- def [get_energy_force_](#)

LPW 06-30-2013.

- def [get_resp_](#)

Electrostatic potential fitting.

- def [get](#)

Every target must be able to return a contribution to the objective function - however, this must be implemented in the specific subclass.

Public Attributes

- [whamboltz_wts](#)

Initialize the base class.

- [qmboltz_wts](#)

QM Boltzmann weights.

- [eqm](#)

Reference (QM) energies.

- [emd0](#)

Energies of the sampling simulation.

- [fqm](#)

Reference (QM) forces.

- [espxyz](#)

ESP grid points.

- [espval](#)

ESP values.

- [qfnm](#)

The qdata.txt file that contains the QM energies and forces.

- [qmatoms](#)

The number of atoms in the QM calculation (Irrelevant if not fitting forces)

- [e_err](#)

Qualitative Indicator: average energy error (in kJ/mol)

- [e_err_pct](#)

- [f_err](#)

Qualitative Indicator: average force error (fractional)

- [f_err_pct](#)

- [esp_err](#)

Qualitative Indicator: "relative RMS" for electrostatic potential.

- [nf_err](#)

- [nf_err_pct](#)

- [tq_err_pct](#)

- [use_nft](#)

Whether to compute net forces and torques, or not.

- [ns](#)

Read in the trajectory file.

- [traj](#)
- [nparticles](#)

The number of (atoms + drude particles + virtual sites)

- [AtomLists](#)

This is a default-dict containing a number of atom-wise lists, such as the residue number of each atom, the mass of each atom, and so on.

- [new_vsites](#)

Read in the topology.

- [save_vmvals](#)

Save the mvals from the last time we updated the vsites.

- [topology_flag](#)
- [force_map](#)
- [nnf](#)
- [ntq](#)
- [force](#)
- [w_force](#)
- [nesp](#)

- [nf_ref](#)
- [tq_ref](#)
- [tq_err](#)
- [w_resp](#)
- [invdists](#)
- [respterm](#)
- [objective](#)

8.1.1 Detailed Description

Subclass of Target for fitting force fields to ab initio data.

Currently Gromacs-X2, Gromacs, Tinker, OpenMM and AMBER are supported.

We introduce the following concepts:

- The number of snapshots
- The reference energies and forces (eqm, fqm) and the file they belong in (qdata.txt)
- The sampling simulation energies (emd0)
- The WHAM Boltzmann weights (these are computed externally and passed in)
- The QM Boltzmann weights (computed internally using the difference between eqm and emd0)

There are also these little details:

- Switches for whether to turn on certain Boltzmann weights (they stack)
- Temperature for the QM Boltzmann weights
- Whether to fit a subset of atoms

This subclass contains the 'get' method for building the objective function from any simulation software (a driver to run the program and read output is still required). The 'get' method can be overridden by subclasses like AbInitio_GMX.

Definition at line 44 of file abinitio.py.

8.1.2 Constructor & Destructor Documentation

8.1.2.1 def forcebalance.abinitio.AbInitio.__init__(self, options, tgt_opts, forcefield)

Initialization; define a few core concepts.

Todo Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Reimplemented from [forcebalance.target.Target](#).

Reimplemented in [forcebalance.gmxio.AbInitio_GMX](#), [forcebalance.openmmio.AbInitio_OpenMM](#), [forcebalance.-tinkerio.AbInitio_TINKER](#), [forcebalance.amberio.AbInitio_AMBER](#), and [forcebalance.abinitio_internal.AbInitio_Internal](#).

8.1.3.6 `def forcebalance.abinitio.Abinitio.get_energy_force_ (self, mvals, AGrad=False, AHess=False)`

LPW 06-30-2013.

This subroutine builds the objective function (and optionally its derivatives) from a general simulation software. This is in contrast to using GROMACS-X2, which computes the objective function and prints it out; then 'get' only needs to call GROMACS and read it in.

This subroutine interfaces with simulation software 'drivers'. The driver is only expected to give the energy and forces.

Now this subroutine may sound trivial since the objective function is simply a least-squares quantity $(M-Q)^2$ - but there are a number of nontrivial considerations. I will list them here.

0) Polytensor formulation: Because there may exist covariance between different components of the force (or covariance between the energy and the force), we build the objective function by taking outer products of vectors that have the form $[E \ F_{1x} \ F_{1y} \ F_{1z} \ F_{2x} \ F_{2y} \ \dots]$, and then we trace it with the inverse of the covariance matrix to get the objective function.

This version implements both the polytensor formulation and the standard formulation.

- 1) Boltzmann weights and normalization: Each snapshot has its own Boltzmann weight, which may or may not be normalized. This subroutine does the normalization automatically.
- 2) Subtracting out the mean energy gap: The zero-point energy difference between reference data and simulation is meaningless. This subroutine subtracts it out.
- 3) Hybrid ensembles: This program builds a combined objective function from both MM and QM ensembles, which is rigorously better than using a single ensemble.

Note that this subroutine does not do EVERYTHING that GROMACS-X2 can do, which includes:

- 1) Internal coordinate systems 2) 'Sampling correction' (deprecated, since it doesn't seem to work) 3) Analytic derivatives

In the previous code (ForTune) this subroutine used analytic first derivatives of the energy and force to build the derivatives of the objective function. Here I will take a simplified approach, because building the derivatives are cumbersome. For now we will return the objective function ONLY. A two-point central difference should give us the first and diagonal second derivative anyhow.

Todo Parallelization over snapshots is not implemented yet

Parameters

| | | |
|----|--------------|-------------------------------------|
| in | <i>mvals</i> | Mathematical parameter values |
| in | <i>AGrad</i> | Switch to turn on analytic gradient |
| in | <i>AHess</i> | Switch to turn on analytic Hessian |

Returns

Answer Contribution to the objective function

Definition at line 529 of file abinitio.py.

```
8.1.3.7 def forcebalance.abinitio.AbInitio.get resp ( self, mvals, AGrad=False, AHess=False )
```

Electrostatic potential fitting.

Implements the RESP objective function. (In Python so obviously not optimized.) This function takes the mathematical parameter values and returns the charges on the ATOMS (fancy mapping going on)

Definition at line 995 of file abinitio.py.

```
8.1.3.8 def forcebalance.abinitio.AbInitio.indicate ( self )
```

Definition at line 419 of file abinitio.py.

Here is the call graph for this function:

8.1.3.9 `def forcebalance.abinitio.AbInitio.prepare_temp_directory (self, options, tgt_opts)`

Prepare the temporary directory, by default does nothing.

Reimplemented in [forcebalance.gmxio.AbInitio_GMX](#), [forcebalance.openmmio.AbInitio_OpenMM](#), [forcebalance.tinkerio.AbInitio_TINKER](#), and [forcebalance.amberio.AbInitio_AMBER](#).

Definition at line 416 of file abinitio.py.

8.1.3.10 `def forcebalance.abinitio.AbInitio.read_reference_data (self)`

Read the reference ab initio data from a file such as qdata.txt.

Todo Add an option for picking any slice out of qdata.txt, helpful for cross-validation

Todo Closer integration of reference data with program - leave behind the qdata.txt format? (For now, I like the readability of qdata.txt)

After reading in the information from qdata.txt, it is converted into the GROMACS energy units (kind of an arbitrary choice); forces (kind of a misnomer in qdata.txt) are multiplied by -1 to convert gradients to forces.

We also subtract out the mean energies of all energy arrays because energy/force matching does not account for zero-point energy differences between MM and QM (i.e. energy of electrons in core orbitals).

The configurations in force/energy matching typically come from a the thermodynamic ensemble of the MM force field at some temperature (by running MD, for example), and for many reasons it is helpful to introduce non-Boltzmann weights in front of these configurations. There are two options: WHAM Boltzmann weights (for combining the weights of several simulations together) and QM Boltzmann weights (for converting MM weights into QM weights). Note that the two sets of weights 'stack'; i.e. they can be used at the same time.

A 'hybrid' ensemble is possible where we use 50% MM and 50% QM weights. Please read more in LPW and Troy Van Voorhis, JCP Vol. 133, Pg. 231101 (2010), doi:10.1063/1.3519043.

Todo The WHAM Boltzmann weights are generated by external scripts (wanalyze.py and make-wham-data.sh) and passed in; perhaps these scripts can be added to the ForceBalance distribution or integrated more tightly.

Finally, note that using non-Boltzmann weights degrades the statistical information content of the snapshots. This problem will generally become worse if the ensemble to which we're reweighting is dramatically different from the one we're sampling from. We end up with a set of Boltzmann weights like [1e-9, 1e-9, 1.0, 1e-9, 1e-9 ...] and this is essentially just one snapshot. I believe Troy is working on something to cure this problem.

Here, we have a measure for the information content of our snapshots, which comes easily from the definition of information entropy:

$$S = -1 * \sum_i (P_i * \log(P_i)) \quad \text{InfoContent} = \exp(-S)$$

With uniform weights, InfoContent is equal to the number of snapshots; with horrible weights, InfoContent is closer to one.

Definition at line 314 of file abinitio.py.

8.1.3.11 `def forcebalance.abinitio.AbInitio.read_topology (self)`

Reimplemented in [forcebalance.openmmio.AbInitio_OpenMM](#), and [forcebalance.gmxio.AbInitio_GMX](#).

8.3.1 Detailed Description

Subclass of AbInitio for force and energy matching using normal GROMACS.

Implements the prepare_temp_directory and energy_force_driver methods.

Definition at line 369 of file gmxio.py.

8.3.2 Constructor & Destructor Documentation

8.3.2.1 def forcebalance.gmxio.AbInitio_GMX.__init__(self, options, tgt_opts, forcefield)

Initialization; define a few core concepts.

Todo Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Reimplemented from [forcebalance.abinitio.AbInitio](#).

Definition at line 371 of file gmxio.py.

8.3.3 Member Function Documentation

8.3.3.1 def forcebalance.gmxio.AbInitio_GMX.energy_force_driver(self, shot)

Computes the energy and force using GROMACS for a single snapshot.

This does not require GROMACS-X2.

Definition at line 449 of file gmxio.py.

Here is the call graph for this function:

8.3.3.2 def forcebalance.gmxio.AbInitio_GMX.energy_force_driver_all(self)

Computes the energy and force using GROMACS for a trajectory.

This does not require GROMACS-X2.

Definition at line 470 of file gmxio.py.

Here is the call graph for this function:

8.3.3.3 def forcebalance.gmxio.AbInitio_GMX.generate_vsite_positions (self)

Call mdrun in order to update the virtual site positions.

Definition at line 493 of file gmxio.py.

Here is the call graph for this function:

8.3.3.4 def forcebalance.gmxio.AbInitio_GMX.prepare_temp_directory (self, options, tgt_opts)

Prepare the temporary directory, by default does nothing.

Reimplemented from [forcebalance.abinitio.AbInitio](#).

Definition at line 424 of file gmxio.py.

Here is the call graph for this function:

8.3.3.5 def forcebalance.gmxio.AbInitio_GMX.read_topology (self)

This function parses the GROMACS topology file (.top) which contains a listing of the molecules in the simulation.

For each molecule, it loads up a "FFMolecule" dictionary which contains information about each atom in the molecule - which residue (i.e. molecular fragment) the atom belongs in, the charge group, the particle type etc.

This allows us to do things like condense the gradients into net forces and torques, determine which particles are real atoms and which are virtual sites, and so on.

Reimplemented from [forcebalance.abinitio.AbInitio](#).

Definition at line 386 of file gmxio.py.

Reimplemented from [forcebalance.abinitio.AbInitio](#).

Definition at line 386 of file gmxio.py.

8.3.4.4 forcebalance::gmxio.AbInitio_GMX::trajfnm

Name of the trajectory.

Definition at line 372 of file gmxio.py.

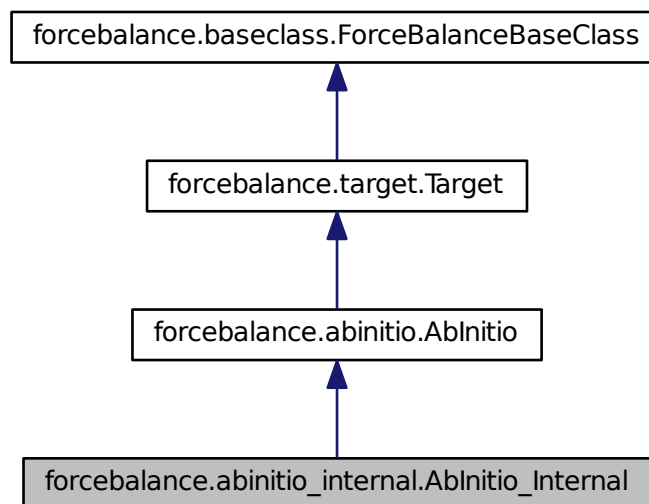

The documentation for this class was generated from the following file:

- [gmxio.py](#)

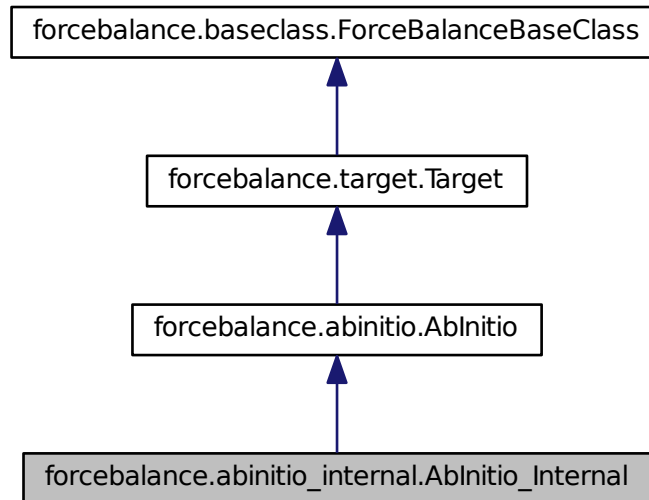

8.4 forcebalance.abinitio_internal.AbInitio_Internal Class Reference

Subclass of Target for force and energy matching using an internal implementation.

Inheritance diagram for forcebalance.abinitio_internal.AbInitio_Internal:

Collaboration diagram for forcebalance.abinitio_internal.AbInitio_Internal:

Public Member Functions

- `def __init__`
Initialization; define a few core concepts.
- `def energy_force_driver_all`
Here we actually compute the interactions and return the energies and forces.

Public Attributes

- `trajfnm`
Name of the trajectory, we need this BEFORE initializing the SuperClass.

8.4.1 Detailed Description

Subclass of Target for force and energy matching using an internal implementation.

Implements the prepare and energy_force_driver methods. The get method is in the superclass.

The purpose of this class is to provide an extremely simple test case that does not require the user to install any external software. It only runs with one of the included sample test calculations (`internal_tip3p`), and the objective function is energy matching.

Warning

This class is only intended to work with a very specific test case (internal_tip3p). This is because the topology and ordering of the atoms is hard-coded (12 water molecules with 3 atoms each).
This class does energy matching only (no forces)

Definition at line 37 of file abinitio_internal.py.

8.4.2 Constructor & Destructor Documentation

8.4.2.1 def forcebalance.abinitio_internal.AbInitio_Internal.__init__(self, options, tgt_opts, forcefield)

Initialization; define a few core concepts.

Todo Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Reimplemented from [forcebalance.abinitio.AbInitio](#).

Definition at line 40 of file abinitio_internal.py.

8.4.3 Member Function Documentation

8.4.3.1 def forcebalance.abinitio_internal.AbInitio_Internal.energy_force_driver_all(self)

Here we actually compute the interactions and return the energies and forces.

I verified this to give the same answer as GROMACS.

Definition at line 50 of file abinitio_internal.py.

8.4.4 Member Data Documentation

8.4.4.1 forcebalance::abinitio_internal.AbInitio_Internal::trajfnm

Name of the trajectory, we need this BEFORE initializing the SuperClass.

8.6.1 Detailed Description

Subclass of `Target` for force and energy matching using TINKER.

Implements the `prepare` and `energy_force_driver` methods.

Definition at line 294 of file `tinkerio.py`.

8.6.2 Constructor & Destructor Documentation

8.6.2.1 `def forcebalance.tinkerio.AbInitio_TINKER.__init__(self, options, tgt_opts, forcefield)`

Initialization; define a few core concepts.

Todo Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Reimplemented from [forcebalance.abinitio.AbInitio](#).

Definition at line 297 of file `tinkerio.py`.

8.6.3 Member Function Documentation

8.6.3.1 `def forcebalance.tinkerio.AbInitio_TINKER.energy_driver_all(self)`

Definition at line 330 of file `tinkerio.py`.

Here is the call graph for this function:

8.6.3.2 `def forcebalance.tinkerio.AbInitio_TINKER.energy_force_driver(self, shot)`

Definition at line 314 of file `tinkerio.py`.

Here is the call graph for this function:

8.6.3.3 `def forcebalance.tinkerio.AbInitio_TINKER.energy_force_driver_all(self)`

Definition at line 343 of file `tinkerio.py`.

Here is the call graph for this function:

8.6.3.4 `def forcebalance.tinkerio.AbInitio_TINKER.prepare_temp_directory(self, options, tgt_opts)`

Prepare the temporary directory, by default does nothing.

8.7.3 Member Function Documentation

8.7.3.1 def forcebalance.forcefield.BackedUpDict.__missing__(self, key)

Definition at line 177 of file forcefield.py.

Here is the call graph for this function:

8.7.4 Member Data Documentation

8.7.4.1 forcebalance::forcefield.BackedUpDict::backup_dict

Definition at line 174 of file forcefield.py.

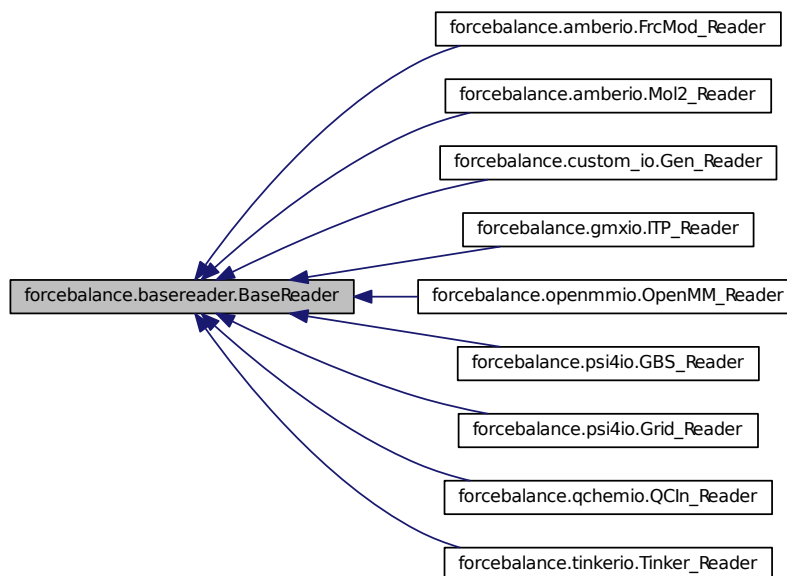

The documentation for this class was generated from the following file:

- [forcefield.py](#)

8.8 forcebalance.basereader.BaseReader Class Reference

The 'reader' class.

Inheritance diagram for forcebalance.basereader.BaseReader:

Public Member Functions

- def [__init__](#)
- def [Split](#)
- def [Whites](#)
- def [feed](#)
- def [build_pid](#)

Returns the parameter type (e.g.

Public Attributes

- [ln](#)
- [itype](#)
- [suffix](#)
- [pdict](#)
- [adict](#)

The mapping of (this residue, atom number) to (atom name) for building atom-specific interactions in [bonds], [angles] etc.

- [molatom](#)

The mapping of (molecule name) to a dictionary of atom types for the atoms in that residue.

- [Molecules](#)
- [AtomTypes](#)

8.8.1 Detailed Description

The 'reader' class.

It serves two main functions:

- 1) When parsing a text force field file, the 'feed' method is called once for every line. Calling the 'feed' method stores the internal variables that are needed for making the unique parameter identifier.
- 2) The 'reader' also stores the 'pdict' dictionary, which is needed for building the matrix of rescaling factors. This is not needed for the XML force fields, so in XML force fields pdict is replaced with a string called "XML_Override".

Definition at line 25 of file basereader.py.

8.8.2 Constructor & Destructor Documentation

8.8.2.1 def forcebalance.basereader.BaseReader.__init__(self, fnm)

Reimplemented in [forcebalance.psi4io.Grid_Reader](#), [forcebalance.gmxio.ITP_Reader](#), [forcebalance.openmmio.OpenMM_Reader](#), [forcebalance.amberio.FrcMod_Reader](#), [forcebalance.tinkerio.Tinker_Reader](#), [forcebalance.custom_io.-Gen_Reader](#), [forcebalance.amberio.Mol2_Reader](#), [forcebalance.psi4io.GBS_Reader](#), and [forcebalance.qchemio.QC-In_Reader](#).

Definition at line 27 of file basereader.py.

8.8.3 Member Function Documentation

8.8.3.1 def forcebalance.basereader.BaseReader.build_pid(self, pfld)

Returns the parameter type (e.g.

K in BONDSK) based on the current interaction type.

Both the 'pdict' dictionary (see [gmxiio.pdict](#)) and the interaction type 'state' (here, BONDS) are needed to get the parameter type.

If, however, 'pdict' does not contain the ptype value, a suitable substitute is simply the field number.

Note that if the interaction type state is not set, then it defaults to the file name, so a generic parameter ID is 'filename.-line_num.field_num'

Reimplemented in [forcebalance.psi4io.Grid_Reader](#), and [forcebalance.psi4io.GBS_Reader](#).

Definition at line 68 of file basereader.py.

8.8.3.2 def forcebalance.basereader.BaseReader.feed (self, line)

Reimplemented in [forcebalance.gmxiio.OTP_Reader](#), [forcebalance.amberio.FrcMod_Reader](#), [forcebalance.tinkerio.-Tinker_Reader](#), [forcebalance.custom_io.Gen_Reader](#), [forcebalance.amberio.Mol2_Reader](#), and [forcebalance.-qchemio.QCIn_Reader](#).

Definition at line 49 of file basereader.py.

Here is the call graph for this function:

8.8.3.3 def forcebalance.basereader.BaseReader.Split (self, line)

Reimplemented in [forcebalance.amberio.FrcMod_Reader](#).

Definition at line 43 of file basereader.py.

Here is the call graph for this function:

8.8.3.4 def forcebalance.basereader.BaseReader.Whites (self, line)

Reimplemented in [forcebalance.amberio.FrcMod_Reader](#).

Definition at line 46 of file basereader.py.

8.11 forcebalance.counterpoise.Counterpoise Class Reference

Target subclass for matching the counterpoise correction.

Inheritance diagram for forcebalance.counterpoise.Counterpoise:

Collaboration diagram for forcebalance.counterpoise.Counterpoise:

Public Member Functions

- `def __init__`
To instantiate [Counterpoise](#), we read the coordinates and counterpoise data.
- `def loadxyz`
Parse an XYZ file which contains several xyz coordinates, and return their elements.
- `def load_cp`
Load in the counterpoise data, which is easy; the file consists of floating point numbers separated by newlines.
- `def get`
Gets the objective function for fitting the counterpoise correction.

Public Attributes

- `xyzs`
Number of snapshots.
- `cpqm`
[Counterpoise](#) correction data.
- `na`
Number of atoms.
- `ns`

8.11.1 Detailed Description

Target subclass for matching the counterpoise correction.

Definition at line 31 of file counterpoise.py.

8.11.2 Constructor & Destructor Documentation

8.11.2.1 `def forcebalance.counterpoise.Counterpoise.__init__(self, options, tgt_opts, forcefield)`

To instantiate [Counterpoise](#), we read the coordinates and counterpoise data.

Reimplemented from [forcebalance.target.Target](#).

Definition at line 35 of file counterpoise.py.

8.11.3 Member Function Documentation

8.11.3.1 `def forcebalance.counterpoise.Counterpoise.get(self, mvals, AGrad=False, AHess=False)`

Gets the objective function for fitting the counterpoise correction.

As opposed to `AbInitio_GMXX2`, which calls an external program, this script actually computes the empirical interaction given the force field parameters.

It loops through the snapshots and atom pairs, and computes pairwise contributions to an energy term according to hard-coded functional forms.

One potential issue is that we go through all atom pairs instead of looking only at atom pairs between different fragments. This means that even for two infinitely separated fragments it will predict a finite CP correction. While it might be okay to apply such a potential in practice, there will be some issues for the fitting. Thus, we assume the last snapshot to be CP-free and subtract that value of the potential back out.

Note that forces and parametric derivatives are not implemented.

Parameters

| | | |
|-----------------|--------------------|---|
| <code>in</code> | <code>mvals</code> | Mathematical parameter values |
| <code>in</code> | <code>AGrad</code> | Switch to turn on analytic gradient (not implemented) |
| <code>in</code> | <code>AHess</code> | Switch to turn on analytic Hessian (not implemented) |

Returns

Answer Contribution to the objective function

Reimplemented from [forcebalance.target.Target](#).

Definition at line 122 of file counterpoise.py.

8.11.3.2 `def forcebalance.counterpoise.Counterpoise.load_cp(self, fnm)`

Load in the counterpoise data, which is easy; the file consists of floating point numbers separated by newlines.

Definition at line 93 of file counterpoise.py.

8.11.3.3 `def forcebalance.counterpoise.Counterpoise.loadxyz(self, fnm)`

Parse an XYZ file which contains several xyz coordinates, and return their elements.

Parameters

| | | |
|-----------------|------------------|-------------------------|
| <code>in</code> | <code>fnm</code> | The input XYZ file name |
|-----------------|------------------|-------------------------|

Returns

elem A list of chemical elements in the XYZ file
xyzs A list of XYZ coordinates (number of snapshots times number of atoms)

Todo I should probably put this into a more general library for reading coordinates.

Definition at line 61 of file counterpoise.py.

8.11.4 Member Data Documentation

8.12 forcebalance.forcefield.FF Class Reference

Force field class.

Inheritance diagram for forcebalance.forcefield.FF:

Collaboration diagram for forcebalance.forcefield.FF:

Public Member Functions

- def [__init__](#)
Instantiation of force field class.
- def [addff](#)
Parse a force field file and add it to the class.
- def [addff_txt](#)
Parse a text force field and create several important instance variables.
- def [addff_xml](#)
Parse an XML force field file and create important instance variables.
- def [make](#)
Create a new force field using provided parameter values.
- def [make_redirect](#)
- def [find_spacings](#)
- def [create_pvals](#)
Converts mathematical to physical parameters.
- def [create_mvals](#)

- Converts physical to mathematical parameters.
- def [rsmake](#)
 - Create the rescaling factors for the coordinate transformation in parameter space.
- def [mktransmat](#)
 - Create the transformation matrix to rescale and rotate the mathematical parameters.
- def [list_map](#)
 - Create the plist, which is like a reversed version of the parameter map.
- def [print_map](#)
 - Prints out the (physical or mathematical) parameter indices, IDs and values in a visually appealing way.
- def [assign_p0](#)
 - Assign physical parameter values to the 'pvals0' array.
- def [assign_field](#)
 - Record the locations of a parameter in a txt file; [[file name, line number, field number, and multiplier]].
- def [__eq__](#)

Public Attributes

- [ffdata](#)
 - As these options proliferate, the force field class becomes less standalone.
- [ffdata_isxml](#)
- [map](#)
 - The mapping of interaction type -> parameter number.
- [plist](#)
 - The listing of parameter number -> interaction types.
- [patoms](#)
 - A listing of parameter number -> atoms involved.
- [pfields](#)
 - A list where pfields[pnum] = ['file',line,field,mult,cmd], basically a new way to modify force field files; when we modify the force field file, we go to the specific line/field in a given file and change the number.
- [rs](#)
 - List of rescaling factors.
- [tm](#)
 - The transformation matrix for mathematical -> physical parameters.
- [tml](#)
 - The transpose of the transformation matrix.
- [excision](#)
 - Indices to exclude from optimization / Hessian inversion.
- [np](#)
 - The total number of parameters.
- [pvals0](#)
 - Initial value of physical parameters.
- [Readers](#)
 - A dictionary of force field reader classes.
- [atomnames](#)
 - A list of atom names (this is new, for ESP fitting)
- [FFAtomTypes](#)
 - WORK IN PROGRESS ## This is a dictionary of {'AtomType':{'Mass': float, 'Charge': float, 'ParticleType': string ('A', 'S', or 'D'), 'AtomicNumber': int}}.

- [FFMolecules](#)
- [redirect](#)

8.12.1 Detailed Description

Force field class.

This class contains all methods for force field manipulation. To create an instance of this class, an input file is required containing the list of force field file names. Everything else inside this class pertaining to force field generation is self-contained.

For details on force field parsing, see the detailed documentation for addff.

Definition at line 194 of file forcefield.py.

8.12.2 Constructor & Destructor Documentation

8.12.2.1 `def forcebalance.forcefield.FF.__init__(self, options, verbose = True)`

Instantiation of force field class.

Many variables here are initialized to zero, but they are filled out by methods like addff, rsmake, and mktransmat.

Definition at line 202 of file forcefield.py.

Here is the call graph for this function:

8.12.3 Member Function Documentation

8.12.3.1 `def forcebalance.forcefield.FF.__eq__(self, other)`

Definition at line 1144 of file forcefield.py.

8.12.3.2 def forcebalance.forcefield.FF.addff (self, ffname)

Parse a force field file and add it to the class.

First, figure out the type of force field file. This is done either by explicitly specifying the type using for example, `ffname force_field.xml:openmm` or we figure it out by looking at the file extension.

Next, parse the file. Currently we support two classes of files - text and XML. The two types are treated very differently; for XML we use the parsers in libxml (via the python lxml module), and for text files we have our own in-house parsing class. Within text files, there is also a specialized GROMACS and TINKER parser as well as a generic text parser.

The job of the parser is to determine the following things: 1) Read the user-specified selection of parameters being fitted 2) Build a mapping (dictionary) of parameter identifier -> index in parameter vector 3) Build a list of physical parameter values 4) Figure out where to replace the parameter values in the force field file when the values are changed 5) Figure out which parameters need to be repeated or sign-flipped

Generally speaking, each parameter value in the force field file has a unique parameter identifier . The identifier consists of three parts - the interaction type, the parameter subtype (within that interaction type), and the atoms involved.

--- If XML: ---

The force field file is read in using the lxml Python module. Specify which parameter you want to fit using by adding a 'parameterize' element to the end of the force field XML file, like so.

```
<AmoebaVdwForce type="BUFFERED-14-7">
  <Vdw class="74" sigma="0.2655" epsilon="0.056484" reduction="0.910"
  parameterize="sigma, epsilon, reduction" />
```

In this example, the parameter identifier would look like `Vdw/74/epsilon` .

--- If GROMACS (.itp) or TINKER (.prm) : ---

Follow the rules in the ITP_Reader or Tinker_Reader derived class. Read the documentation in the class documentation or the 'feed' method to learn more. In all cases the parameter is tagged using `# PARM 3` (where `#` denotes a comment, the word `PARM` stays the same, and 3 is the field number starting from zero.)

--- If normal text : ---

The parameter identifier is simply built using the file name, line number, and field. Thus, the identifier is unique but completely noninformative (which is not ideal for our purposes, but it works.)

--- Endif ---

Warning

My program currently assumes that we are only using one MM program per job. If we use CHARMM and GROMACS to perform simulations as part of the same TARGET, we will get messed up. Maybe this needs to be fixed in the future, with program prefixes to parameters like `C_` , `G_` .. or simply unit conversions, you get the idea.

I don't think the multiplier actually works for analytic derivatives unless the interaction calculator knows the multiplier as well. I'm sure I can make this work in the future if necessary.

Parameters

| | | |
|----|--------|------------------------------|
| in | ffname | Name of the force field file |
|----|--------|------------------------------|

Definition at line 393 of file forcefield.py.

8.12.3.3 `def forcebalance.forcefield.FF.addff_txt(self, fname, fftype)`

Parse a text force field and create several important instance variables.

Each line is processed using the 'feed' method as implemented in the reader class. This essentially allows us to create the correct parameter identifier (pid), because the pid comes from more than the current line, it also depends on the section that we're in.

When 'PARM' or 'RPT' is encountered, we do several things:

- Build the parameter identifier and insert it into the map
- Point to the file name, line number, and field where the parameter may be modified

Additionally, when 'PARM' is encountered:

- Store the physical parameter value (this is permanent; it's the original value)
- Increment the total number of parameters

When 'RPT' is encountered we don't expand the parameter vector because this parameter is a copy of an existing one. If the parameter identifier is preceded by MINUS_, we chop off the prefix but remember that the sign needs to be flipped.

Definition at line 463 of file forcefield.py.

Here is the call graph for this function:

8.12.3.4 `def forcebalance.forcefield.FF.addff_xml(self, fname)`

Parse an XML force field file and create important instance variables.

This was modeled after `addff_txt`, but XML and text files are fundamentally different, necessitating two different methods.

We begin with an `_ElementTree` object. We search through the tree for the 'parameterize' and 'parameter_repeat' keywords. Each time the keyword is encountered, we do the same four actions that I describe in `addff_txt`.

It's hard to specify precisely the location in an XML file to change a force field parameter. I can create a list of tree elements (essentially pointers to elements within a tree), but this method breaks down when I copy the tree because I have no way to refer to the copied tree elements. Fortunately, `lxml` gives me a way to represent a tree using a flat list, and my XML file 'locations' are represented using the positions in the list.

Warning

The sign-flip hasn't been implemented yet. This shouldn't matter unless your calculation contains repeated parameters with opposite sign.

Definition at line 571 of file forcefield.py.

Here is the call graph for this function:

8.12.3.5 def forcebalance.forcefield.FF.assign_field(self, idx, fnm, ln, pfld, mult, cmd=None)

Record the locations of a parameter in a txt file; [[file name, line number, field number, and multiplier]].

Note that parameters can have multiple locations because of the repetition functionality.

Parameters

| | | |
|----|-------------|--|
| in | <i>idx</i> | The index of the parameter. |
| in | <i>fnm</i> | The file name of the parameter field. |
| in | <i>ln</i> | The line number within the file (or the node index in the flattened xml) |
| in | <i>pfld</i> | The field within the line (or the name of the attribute in the xml) |
| in | <i>mult</i> | The multiplier (this is usually 1.0) |

Definition at line 1138 of file forcefield.py.

Here is the call graph for this function:

8.12.3.6 def forcebalance.forcefield.FF.assign_p0(self, idx, val)

Assign physical parameter values to the 'pvals0' array.

Parameters

| | | |
|----|------------|---|
| in | <i>idx</i> | The index to which we assign the parameter value. |
| in | <i>val</i> | The parameter value to be inserted. |

Definition at line 1120 of file forcefield.py.

Here is the call graph for this function:

8.12.3.7 def forcebalance.forcefield.FF.create_mvals (self, pvals)

Converts physical to mathematical parameters.

We create the inverse transformation matrix using SVD.

Parameters

| | | |
|----|--------------|-------------------------|
| in | <i>pvals</i> | The physical parameters |
|----|--------------|-------------------------|

Returns

mvals The mathematical parameters

Definition at line 854 of file forcefield.py.

Here is the call graph for this function:

8.12.3.8 def forcebalance.forcefield.FF.create_pvals (self, mvals)

Converts mathematical to physical parameters.

First, mathematical parameters are rescaled and rotated by multiplying by the transformation matrix, followed by adding the original physical parameters.

Parameters

| | | |
|----|--------------|-----------------------------|
| in | <i>mvals</i> | The mathematical parameters |
|----|--------------|-----------------------------|

Returns

pvals The physical parameters

Definition at line 817 of file forcefield.py.

Here is the call graph for this function:

```
8.12.3.9 def forcebalance.forcefield.FF.find spacings ( self )
```

Definition at line 772 of file forcefield.py.

Here is the call graph for this function:

```
8.12.3.10 def forcebalance.forcefield.FF.list_map ( self )
```

Create the plist, which is like a reversed version of the parameter map.

More convenient for printing.

Definition at line 1097 of file forcefield.py.

Here is the call graph for this function:

```
8.12.3.11 def forcebalance.forcefield.FF.make ( self, vals, use_pvals=False, printdir=None, precision=12 )
```

Create a new force field using provided parameter values.

This big kahuna does a number of things: 1) Creates the physical parameters from the mathematical parameters 2) Creates force fields with physical parameters substituted in 3) Prints the force fields to the specified file.

It does NOT store the mathematical parameters in the class state (since we can only hold one set of parameters).

Parameters

| | | |
|----|------------------|--|
| in | <i>printdir</i> | The directory that the force fields are printed to; as usual this is relative to the project root directory. |
| in | <i>vals</i> | Input parameters. I previously had an option where it uses stored values in the class state, but I don't think that's a good idea anymore. |
| in | <i>use_pvals</i> | Switch for whether to bypass the coordinate transformation and use physical parameters directly. |

Definition at line 619 of file forcefield.py.

Here is the call graph for this function:

```
8.12.3.12 def forcebalance.forcefield.FF.make redirect ( self, mvals )
```

Definition at line 731 of file forcefield.py.

Here is the call graph for this function:

```
8.12.3.13 def forcebalance.forcefield.FF.mktransmat ( self )
```

Create the transformation matrix to rescale and rotate the mathematical parameters.

For point charge parameters, project out perturbations that change the total charge.

First build these:

'qmap' : Just a list of parameter indices that point to charges.

'qid' : For each parameter in the qmap, a list of the affected atoms :) A potential target for the molecule-specific thang.

Then make this:

'qtrans2': A transformation matrix that rotates the charge parameters. The first row is all zeros (because it corresponds to increasing the charge on all atoms) The other rows correspond to changing one of the parameters and decreasing all of the others equally such that the overall charge is preserved.

'qmat2': An identity matrix with 'qtrans2' pasted into the right place

```
'transmat': 'qmat2' with rows and columns scaled using self.rs
```

'excision': Parameter indices that need to be 'cut out' because they are irrelevant and mess with the matrix diagonalization

Todo Only project out changes in total charge of a molecule, and perhaps generalize to fragments of molecules or other types of parameters.

The AMOEBA selection of charge depends not only on the atom type, but what that atom is bonded to.

Definition at line 947 of file forcefield.py.

```
8.12.3.14 def forcebalance.forcefield.FF.print_map ( self, vals=None, precision=4 )
```

Prints out the (physical or mathematical) parameter indices, IDs and values in a visually appealing way.

Definition at line 1109 of file forcefield.py.

Here is the call graph for this function:

8.12.4.5 forcebalance::forcefield.FF::ffdata_isxml

8.15 forcebalance.psi4io.GBS_Reader Class Reference

Interaction type -> Parameter Dictionary.

Inheritance diagram for forcebalance.psi4io.GBS_Reader:

Collaboration diagram for forcebalance.psi4io.GBS_Reader:

Public Member Functions

- def `__init__`
- def `build_pid`
Returns the parameter type (e.g.
- def `feed`
Feed in a line.

Public Attributes

- `element`
- `amom`
- `last_amom`
- `basis_number`
- `contraction_number`
- `adict`
The mapping of (this residue, atom number) to (atom name) for building atom-specific interactions in [bonds], [angles] etc.
- `isdata`
- `destroy`

8.15.1 Detailed Description

Interaction type -> Parameter Dictionary.

pdict = {'Exponent':{0:'A', 1:'C'}, 'BASSP':{0:'A', 1:'B', 2:'C'}} Finite state machine for parsing basis set files.

Definition at line 32 of file psi4io.py.

8.15.2 Constructor & Destructor Documentation

8.15.2.1 def forcebalance.psi4io.GBS_Reader.__init__(self, fnm=None)

Reimplemented from [forcebalance.basereader.BaseReader](#).

Definition at line 34 of file psi4io.py.

8.15.3 Member Function Documentation

8.15.3.1 def forcebalance.psi4io.GBS_Reader.build_pid (self, pflid)

Returns the parameter type (e.g.

K in BONDSK) based on the current interaction type.

Both the 'pdict' dictionary (see [gmxiio.pdict](#)) and the interaction type 'state' (here, BONDS) are needed to get the parameter type.

If, however, 'pdict' does not contain the ptype value, a suitable substitute is simply the field number.

Note that if the interaction type state is not set, then it defaults to the file name, so a generic parameter ID is 'filename.-line_num.field_num'

Reimplemented from [forcebalance.basereader.BaseReader](#).

Definition at line 45 of file psi4io.py.

Here is the call graph for this function:

8.15.3.2 def forcebalance.psi4io.GBS_Reader.feed (self, line, lin indep = False)

Feed in a line.

Parameters

| | | |
|----|------|------------------|
| in | line | The line of data |
|----|------|------------------|

Definition at line 58 of file psi4io.py.

Here is the call graph for this function:

8.16 forcebalance.custom_io.Gen_Reader Class Reference

Finite state machine for parsing custom GROMACS force field files.

Inheritance diagram for forcebalance.custom_io.Gen_Reader:

Collaboration diagram for forcebalance.custom_io.Gen_Reader:

Public Member Functions

- `def __init__`
- `def feed`
Feed in a line.

Public Attributes

- `sec`
The current section that we're in.
- `pdict`
The parameter dictionary (defined in this file)
- `itype`
- `suffix`

8.16.1 Detailed Description

Finite state machine for parsing custom GROMACS force field files.

This class is instantiated when we begin to read in a file. The `feed(line)` method updates the state of the machine, giving it information like the residue we're currently on, the nonbonded interaction type, and the section that we're in. Using this information we can look up the interaction type and parameter type for building the parameter ID.

Definition at line 41 of file `custom_io.py`.

8.16.2 Constructor & Destructor Documentation

8.16.2.1 `def forcebalance.custom_io.Gen_Reader.__init__(self, fnm)`

Reimplemented from `forcebalance.basereader.BaseReader`.

Definition at line 43 of file `custom_io.py`.

8.18 forcebalance.interaction.Interaction Class Reference

Subclass of Target for fitting force fields to interaction energies.

Inheritance diagram for forcebalance.interaction.Interaction:

Collaboration diagram for forcebalance.interaction.Interaction:

Public Member Functions

- def `__init__`
All options here are intended to be usable by every conceivable type of target (in other words, only add content here if it's widely applicable.)
- def `read_reference_data`
Read the reference ab initio data from a file such as qdata.txt.
- def `prepare_temp_directory`
Prepare the temporary directory, by default does nothing.
- def `indicate`
- def `get`
Evaluate objective function.

Public Attributes

- `select1`
Number of snapshots.
- `select2`
Set fragment 2.
- `eqm`
Set upper cutoff energy.
- `label`
Snapshot label, useful for graphing.
- `qfnm`
The qdata.txt file that contains the QM energies and forces.
- `e_err`
Qualitative Indicator: average energy error (in kJ/mol)
- `e_err_pct`
- `ns`
Read in the trajectory file.
- `traj`
- `divisor`
Read in the reference data.
- `prefactor`
- `weight`
- `emm`
- `objective`

8.18.1 Detailed Description

Subclass of Target for fitting force fields to interaction energies.

Currently TINKER is supported.

We introduce the following concepts:

- The number of snapshots
- The reference interaction energies and the file they belong in (qdata.txt)

Definition at line 32 of file interaction.py.

```
8.18.2.1 def forcebalance.interaction.Interaction. init ( self, options, tgt_opts, forcefield )
```

If we want to add attributes that are more specific (i.e. a set of reference forces for force matching), they are added in the subclass *AbInitio* that inherits from *Target*.

Reimplemented from [forcebalance.target.Target](#).

Reimplemented in [forcebalance.tinkerio.Interaction_TINKER](#), [forcebalance.gmxio.Interaction_GMX](#), and [forcebalance.openmmio.Interaction_OpenMM](#).

Definition at line 35 of file interaction.py.

```
8.18.3.1 def forcebalance.interaction.Interaction.get ( self, mvals, AGrad=False, AHess=False )
```

Evaluate objective function.

Reimplemented from [forcebalance.target.Target](#).

Definition at line 160 of file interaction.py.

```
8.18.3.2 def forcebalance.interaction.Interaction.indicate ( self )
```

Definition at line 144 of file interaction.py.

Here is the call graph for this function:

8.18.3.3 `def forcebalance.interaction.Interaction.prepare temp directory (self, options, tgt_opts)`

Prepare the temporary directory, by default does nothing.

Reimplemented in `forcebalance.tinkerio.Interaction_TINKER`, `forcebalance.gmxio.Interaction_GMX`, and `forcebalance.openmmio.Interaction_OpenMM`.

Definition at line 141 of file interaction.py.

```
8.18.3.4 def forcebalance.interaction.Interaction.read_reference_data( self )
```

Read the reference ab initio data from a file such as qdata.txt.

After reading in the information from qdata.txt, it is converted into the GROMACS/OpenMM units (kJ/mol for energy, kJ/mol/nm force).

Definition at line 122 of file interaction.py.

Here is the call graph for this function:

8.18.4 Member Data Documentation

8.18.4.1 forcebalance::interaction.Interaction::divisor

Read in the reference data.

Prepare the temporary directory

Definition at line 50 of file interaction.py.

8.18.4.2 forcebalance::interaction.Interaction::e_err

Qualitative Indicator: average energy error (in kJ/mol)

Definition at line 47 of file interaction.py.

8.18.4.3 forcebalance::interaction.Interaction::e_err_pct

Definition at line 47 of file interaction.py.

8.18.4.4 forcebalance::interaction.Interaction::emm

Definition at line 160 of file interaction.py.

8.18.4.5 forcebalance::interaction.Interaction::eqm

Set upper cutoff energy.

Reference (QM) interaction energies

Definition at line 44 of file interaction.py.

8.18.4.6 forcebalance::interaction.Interaction::label

Snapshot label, useful for graphing.

Definition at line 45 of file interaction.py.

8.18.4.7 forcebalance::interaction.Interaction::ns

Read in the trajectory file.

Definition at line 48 of file interaction.py.

8.18.4.8 forcebalance::interaction.Interaction::objective

Definition at line 160 of file interaction.py.

8.18.4.9 forcebalance::interaction.Interaction::prefactor

Definition at line 50 of file interaction.py.

8.18.4.10 forcebalance::interaction.Interaction::qfnm

The qdata.txt file that contains the QM energies and forces.

Definition at line 46 of file interaction.py.

8.18.4.11 forcebalance::interaction.Interaction::select1

Number of snapshots.

Do we call Q-Chem for dielectric energies? (Currently needs to be fixed) Do we put the reference energy into the denominator? Do we put the reference energy into the denominator? What is the energy denominator? Set fragment 1

Definition at line 41 of file interaction.py.

8.18.4.12 forcebalance::interaction.Interaction::select2

Set fragment 2.

Definition at line 42 of file interaction.py.

8.18.4.13 forcebalance::interaction.Interaction::traj

Definition at line 48 of file interaction.py.

8.18.4.14 forcebalance::interaction.Interaction::weight

Definition at line 160 of file interaction.py.

The documentation for this class was generated from the following file:

- [interaction.py](#)

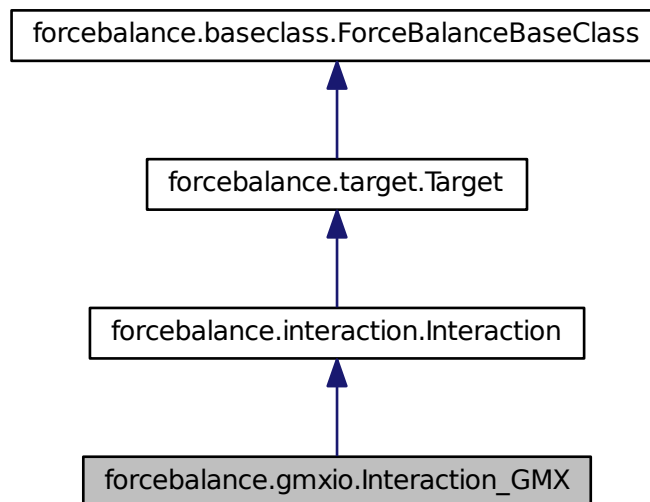

8.19 forcebalance.gmxio.Interaction_GMX Class Reference

Subclass of Interaction for interaction energy matching using GROMACS.

Inheritance diagram for forcebalance.gmxio.Interaction_GMX:

Collaboration diagram for forcebalance.gmxio.Interaction_GMX:

Public Member Functions

- `def __init__`
All options here are intended to be usable by every conceivable type of target (in other words, only add content here if it's widely applicable.)
- `def prepare_temp_directory`
Prepare the temporary directory, by default does nothing.
- `def interaction_driver`
Computes the energy and force using GROMACS for a single snapshot.
- `def interaction_driver_all`
Computes the energy and force using GROMACS for a trajectory.

Public Attributes

- `trajfnm`
Name of the trajectory.
- `topfnm`
- `Dielectric`
- `Diel_B`

8.19.1 Detailed Description

Subclass of Interaction for interaction energy matching using GROMACS.

Definition at line 506 of file gmxio.py.

8.19.2 Constructor & Destructor Documentation

8.19.2.1 `def forcebalance.gmxio.Interaction_GMX.__init__(self, options, tgt_opts, forcefield)`

All options here are intended to be usable by every conceivable type of target (in other words, only add content here if it's widely applicable.)

If we want to add attributes that are more specific (i.e. a set of reference forces for force matching), they are added in the subclass AbInitio that inherits from Target.

Reimplemented from [forcebalance.interaction.Interaction](#).

Definition at line 508 of file gmxio.py.

8.19.3 Member Function Documentation

8.19.3.1 `def forcebalance.gmxio.Interaction_GMX.interaction_driver(self, shot)`

Computes the energy and force using GROMACS for a single snapshot.

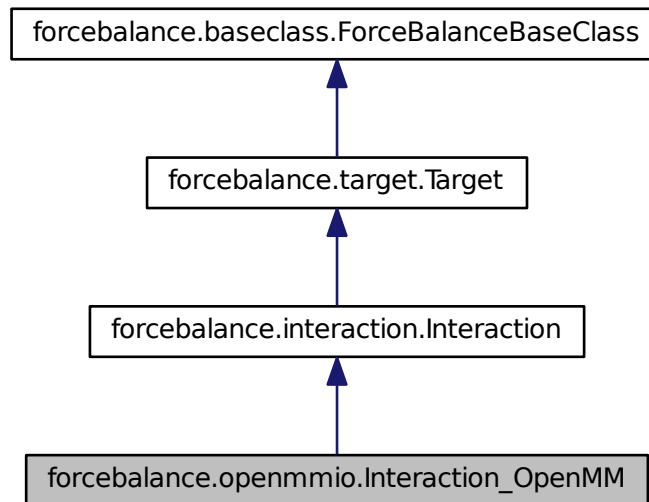

This does not require GROMACS-X2.

Definition at line 539 of file gmxio.py.

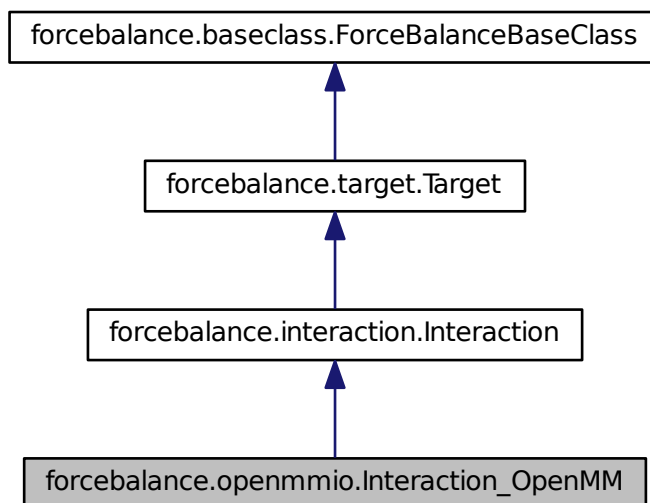

8.20 forcebalance.openmmio.Interaction_OpenMM Class Reference

Subclass of Target for interaction matching using OpenMM.

Inheritance diagram for forcebalance.openmmio.Interaction_OpenMM:

Collaboration diagram for forcebalance.openmmio.Interaction_OpenMM:

Public Member Functions

- `def __init__`
All options here are intended to be usable by every conceivable type of target (in other words, only add content here if it's widely applicable.)
- `def prepare_temp_directory`
Prepare the temporary directory, by default does nothing.
- `def energy_driver_all`
- `def interaction_driver_all`

Public Attributes

- `trajfnm`
Name of the trajectory file containing snapshots.
- `simulations`
Dictionary of simulation objects (dimer, fraga, fragb)
- `platform`
Set up three OpenMM System objects.

8.20.1 Detailed Description

Subclass of Target for interaction matching using OpenMM.

Definition at line 467 of file openmmio.py.

8.20.2 Constructor & Destructor Documentation

8.20.2.1 def forcebalance.openmmio.Interaction_OpenMM.__init__(self, options, tgt_opts, forcefield)

All options here are intended to be usable by every conceivable type of target (in other words, only add content here if it's widely applicable.)

If we want to add attributes that are more specific (i.e. a set of reference forces for force matching), they are added in the subclass Ablnitio that inherits from Target.

Reimplemented from [forcebalance.interaction.Interaction](#).

Definition at line 470 of file openmmio.py.

8.20.3 Member Function Documentation

8.20.3.1 def forcebalance.openmmio.Interaction_OpenMM.energy_driver_all(self, mode)

8.22 forcebalance.gmxio.ITP_Reader Class Reference

Finite state machine for parsing GROMACS force field files.

Inheritance diagram for forcebalance.gmxio.ITP_Reader:

Collaboration diagram for forcebalance.gmxio.ITP_Reader:

Public Member Functions

- def `__init__`
- def `feed`

Given a line, determine the interaction type and the atoms involved (the suffix).

Public Attributes

- `sec`
The current section that we're in.
- `nbtype`
Nonbonded type.
- `mol`
The current molecule (set by the `moleculetype` keyword)
- `pdict`
The parameter dictionary (defined in this file)
- `atomnames`

Listing of all atom names in the file, (probably unnecessary)

- [atomtypes](#)

Listing of all atom types in the file, (probably unnecessary)

- [atomtype_to_mass](#)

A dictionary of atomic masses.

- [itype](#)
- [suffix](#)
- [molatom](#)

The mapping of (molecule name) to a dictionary of atom types for the atoms in that residue.

8.22.1 Detailed Description

Finite state machine for parsing GROMACS force field files.

We open the force field file and read all of its lines. As we loop through the force field file, we look for two types of tags: (1) section markers, in GMX indicated by [section_name], which allows us to determine the section, and (2) parameter tags, indicated by the 'PARM' or 'RPT' keywords.

As we go through the file, we figure out the atoms involved in the interaction described on each line.

When a 'PARM' keyword is indicated, it is followed by a number which is the field in the line to be modified, starting with zero. Based on the field number and the section name, we can figure out the parameter type. With the parameter type and the atoms in hand, we construct a 'parameter identifier' or pid which uniquely identifies that parameter. We also store the physical parameter value in an array called 'pvals0' and the precise location of that parameter (by filename, line number, and field number) in a list called 'pfields'.

An example: Suppose in 'my_ff.itp' I encounter the following on lines 146 and 147:

```
[ angletypes ]
CA  CB  O  1  109.47  350.00  ; PARM 4 5
```

From reading [angletypes] I know I'm in the 'angletypes' section.

On the next line, I notice two parameters on fields 4 and 5.

From the atom types, section type and field number I know the parameter IDs are 'ANGLESBCACBO' and 'ANGLE-SKCACBO'.

After building `map={'ANGLESBCACBO':1,'ANGLESKCACBO':2}`, I store the values in an array: `pvals0=array([109.-47, 350.00])`, and I put the parameter locations in `pfields`: `pfields=[['my_ff.itp',147,4,1.0],['my_ff.itp',146,5,1.0]]`. The 1.0 is a 'multiplier' and I will explain it below.

Note that in the creation of parameter IDs, we run into the issue that the atoms involved in the interaction may be labeled in reverse order (e.g. OCACB). Thus, we store both the normal and the reversed parameter ID in the map.

Parameter repetition and multiplier:

If 'RPT' is encountered in the line, it is always in the syntax: 'RPT 4 ANGLESBCACAH 5 MINUS_ANGLESKCAH /RPT'. In this case, field 4 is replaced by the stored parameter value corresponding to ANGLESBCACAH and field 5 is replaced by -1 times the stored value of ANGLESKCAH. Now I just picked this as an example, I don't think people actually want a negative angle force constant .. :) the MINUS keyword does come in handy for assigning atomic charges and virtual site positions. In order to achieve this, a multiplier of -1.0 is stored into `pfields` instead of 1.0.

Todo Note that I can also create the opposite virtual site position by changing the atom labeling, woo!

Definition at line 214 of file `gmxio.py`.

8.22.2 Constructor & Destructor Documentation

8.22.2.1 def forcebalance.gmxio.ITP_Reader.__init__(self, fnm)

Reimplemented from [forcebalance.basereader.BaseReader](#).

Definition at line 217 of file gmxio.py.

8.22.3 Member Function Documentation

8.22.3.1 def forcebalance.gmxio.ITP_Reader.feed(self, line)

Given a line, determine the interaction type and the atoms involved (the suffix).

For example, we want

```
H O H 5 1.231258497536e+02 4.269161426840e+02 -1.033397697685e-02 1.304674117410e+04  
; PARM 4 5 6 7
```

to give us itype = 'UREY_BRADLEY' and suffix = 'HOH'

If we are in a TypeSection, it returns a list of atom types;

If we are in a TopolSection, it returns a list of atom names.

The section is essentially a case statement that picks out the appropriate interaction type and makes a list of the atoms involved

Note that we can call gmxdump for this as well, but I prefer to read the force field file directly.

ToDo: [atoms] section might need to be more flexible to accommodate optional fields

Reimplemented from [forcebalance.basereader.BaseReader](#).

Definition at line 255 of file gmxio.py.

8.22.4 Member Data Documentation

8.22.4.1 forcebalance::gmxio.ITP_Reader::atomnames

Listing of all atom names in the file, (probably unnecessary)

Definition at line 222 of file gmxio.py.

8.22.4.2 forcebalance::gmxio.ITP_Reader::atomtype_to_mass

A dictionary of atomic masses.

Definition at line 224 of file gmxio.py.

8.22.4.3 forcebalance::gmxio.ITP_Reader::atomtypes

Listing of all atom types in the file, (probably unnecessary)

Definition at line 223 of file gmxio.py.

8.24.1 Detailed Description

Subclass of Target for liquid property matching.

Definition at line 47 of file liquid.py.

8.24.2 Constructor & Destructor Documentation

8.24.2.1 `def forcebalance.liquid.Liquid.__init__(self, options, tgt_opts, forcefield)`

Instantiation of the subclass.

We begin by instantiating the superclass here and also defining a number of core concepts for energy / force matching.

Todo Obtain the number of true atoms (or the particle -> atom mapping) from the force field.

Reimplemented from [forcebalance.target.Target](#).

Reimplemented in [forcebalance.openmmio.Liquid_OpenMM](#), and [forcebalance.tinkerio.Liquid_TINKER](#).

Definition at line 60 of file liquid.py.

8.24.3 Member Function Documentation

8.24.3.1 `def forcebalance.liquid.Liquid.get(self, mvals, AGrad=True, AHess=True)`

Fitting of liquid bulk properties.

In order to reproduce experimentally known data, we need to run a simulation and compare the simulation result to experiment. The main challenge here is that the simulations are computationally intensive (i.e. they require energy and force evaluations), and furthermore the results are noisy. We need to run the simulations automatically and remotely (i.e. on clusters) and a good way to calculate the derivatives of the simulation results with respect to the parameter values.

After the results come back, they are gathered together to form an objective function.

Parameters

| | | |
|----|--------------|-------------------------------------|
| in | <i>mvals</i> | Mathematical parameter values |
| in | <i>AGrad</i> | Switch to turn on analytic gradient |
| in | <i>AHess</i> | Switch to turn on analytic Hessian |

8.28.1 Detailed Description

This is to manage [mol2](#) atomic lines on the form: 1 C1 5.4790 42.2880 49.5910 C.ar 1 <1> 0.0424.

Definition at line 32 of file Mol2.py.

8.28.2 Constructor & Destructor Documentation

8.28.2.1 `def forcebalance.Mol2.mol2_atom.__init__(self, data=None)`

if data is passed, it will be installed

Definition at line 37 of file Mol2.py.

8.28.3 Member Function Documentation

```
8.28.3.1 def forcebalance.Mol2.mol2_atom.__repr__( self )
```

assemble the properties as a text line, and return it

Definition at line 78 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.2 def forcebalance.Mol2.mol2_atom.parse ( self, data )
```

split the text line into a series of properties

Definition at line 56 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.3 def forcebalance.Mol2.mol2_atom.set_atom_id( self, atom_id=None )
```

atom identifier (integer, starting from 1)

Definition at line 90 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.4 def forcebalance.Mol2.mol2_atom.set_atom_name( self, atom_name=None )
```

The name of the atom (string)

Definition at line 99 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.5 def forcebalance.Mol2.mol2_atom.set_atom_type( self, atom_type=None )
```

The **mol2** type of the atom.

Definition at line 119 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.6 def forcebalance.Mol2.mol2_atom.set_charge ( self, charge=None )
```

atomic charge

Definition at line 146 of file Mol2.py.

```
8.28.3.7 def forcebalance.Mol2.mol2_atom.set_crds( self, x=None, y=None, z=None )
```

the coordinates of the atom

Definition at line 108 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.8 def forcebalance.Mol2.mol2_atom.set_status_bit( self, status_bit=None )
```

Never to use (in theory)

Definition at line 155 of file Mol2.py.

Here is the call graph for this function:

```
8.28.3.9 def forcebalance.Mol2.mol2_atom.set_subst_id( self, subst_id=None )
```

substructure identifier

Definition at line 128 of file Mol2.py.

Here is the call graph for this function:

8.28.3.10 `def forcebalance.Mol2.mol2_atom.set_subst_name (self, subst_name = None)`

substructure name

Definition at line 137 of file Mol2.py.

8.33 forcebalance.molecule.Molecule Class Reference

Lee-Ping's general file format conversion class.

Public Member Functions

- `def __len__`
Return the number of frames in the trajectory.
- `def __getattr__`
Whenever we try to get a class attribute, it first tries to get the attribute from the Data dictionary.
- `def __setattr__`
Whenever we try to get a class attribute, it first tries to get the attribute from the Data dictionary.
- `def __getitem__`
The [Molecule](#) class has list-like behavior, so we can get slices of it.
- `def __delitem__`
Similarly, in order to delete a frame, we simply perform item deletion on framewise variables.
- `def __iter__`

- List-like behavior for looping over trajectories.*
- def `__add__`
Add method for `Molecule` objects.
- def `__iadd__`
Add method for `Molecule` objects.
- def `append`
- def `__init__`
To create the `Molecule` object, we simply define the table of file reading/writing functions and read in a file if it is provided.
- def `require`
- def `write`
- def `center_of_mass`
- def `radius_of_gyration`
- def `load_frames`
- def `edit_qcrems`
- def `add_quantum`
- def `add_virtual_site`
Add a virtual site to the system.
- def `replace_peratom`
Replace all of the data for a certain attribute in the system from orig to want.
- def `replace_peratom_conditional`
Replace all of the data for a attribute key2 from orig to want, contingent on key1 being equal to cond.
- def `atom_select`
Return a copy of the object with certain atoms selected.
- def `align_by_moments`
Align molecules using the "moment of inertia." Note that we're following the MSMBuild convention of using all ones for the masses.
- def `align`
Align molecules.
- def `build_topology`
A bare-bones implementation of the bond graph capability in the nanoreactor code.
- def `measure_dihedrals`
Return a series of dihedral angles, given four atom indices numbered from zero.
- def `all_pairwise_rmsd`
Find pairwise RMSD (super slow, not like the one in MSMBuild.)
- def `align_center`
- def `openmm_positions`
Returns the Cartesian coordinates in the `Molecule` object in a list of OpenMM-compatible positions, so it is possible to type `simulation.context.setPositions(Mol.openmm_positions()[0])` or something like that.
- def `openmm_boxes`
Returns the periodic box vectors in the `Molecule` object in a list of OpenMM-compatible boxes, so it is possible to type `simulation.context.setPeriodicBoxVectors(Mol.openmm_boxes()[0])` or something like that.
- def `split`
Split the molecule object into a number of separate files (chunks), either by specifying the number of frames per chunk or the number of chunks.
- def `read_xyz`
Parse a .xyz file which contains several xyz coordinates, and return their elements.
- def `read_mdcrd`
Parse an AMBER .mdcrd file.

- def [read_qdata](#)
- def [read_mol2](#)
- def [read_dcd](#)
- def [read_com](#)
Parse a Gaussian .com file and return a SINGLE-ELEMENT list of xyz coordinates (no multiple file support)
- def [read_arc](#)
Read a TINKER .arc file.
- def [read_gro](#)
Read a GROMACS .gro file.
- def [read_charmm](#)
Read a CHARMM .cor (or .crd) file.
- def [read_qcin](#)
Read a Q-Chem input file.
- def [read_pdb](#)
Loads a PDB and returns a dictionary containing its data.
- def [read_qcesp](#)
- def [read_qcout](#)
Q-Chem output file reader, adapted for our parser.
- def [write_qcin](#)
- def [write_xyz](#)
- def [write_molproq](#)
- def [write_mdcrd](#)
- def [write_arc](#)
- def [write_gro](#)
- def [write_dcd](#)
- def [write_pdb](#)
Save to a PDB.
- def [write_qdata](#)
Text quantum data format.
- def [require_resid](#)
- def [require_resname](#)
- def [require_boxes](#)

Public Attributes

- [Read_Tab](#)
The table of file readers.
- [Write_Tab](#)
The table of file writers.
- [Funnel](#)
A funnel dictionary that takes redundant file types and maps them down to a few.
- [Data](#)
Creates entries like 'gromacs' : 'gromacs' and 'xyz' : 'xyz' in the Funnel.
- [comms](#)
Read in stuff if we passed in a file name, otherwise return an empty instance.
- [topology](#)
Make sure the comment line isn't too long for i in range(len(self.comms)): self.comms[i] = self.comms[i][:100] if len(self.comms[i]) > 100 else self.comms[i] Attempt to build the topology for small systems.

- [molecules](#)
- [fout](#)

Fill in comments.

- [resid](#)
- [resname](#)
- [boxes](#)

8.33.1 Detailed Description

Lee-Ping's general file format conversion class.

The purpose of this class is to read and write chemical file formats in a way that is convenient for research. There are highly general file format converters out there (e.g. catcd, openbabel) but I find that writing my own class can be very helpful for specific purposes. Here are some things this class can do:

- Convert a .gro file to a .xyz file, or a .pdb file to a .dcd file. Data is stored internally, so any readable file can be converted into any writable file as long as there is sufficient information to write that file.
- Accumulate information from different files. For example, we may read A.gro to get a list of coordinates, add quantum settings from a B.in file, and write A.in (this gives us a file that we can use to run QM calculations)
- Concatenate two trajectories together as long as they're compatible. This is done by creating two [Molecule](#) objects and then simply adding them. Addition means two things: (1) Information fields missing from each class, but present in the other, are added to the sum, and (2) Appendable or per-frame fields (i.e. coordinates) are concatenated together.
- Slice trajectories using reasonable Python language. That is to say, `MyMolecule[1:10]` returns a new [Molecule](#) object that contains frames 2 through 10.

Next step: Read in Q-Chem output data using this too!

Special variables: These variables cannot be set manually because there is a special method associated with getting them.

`na` = The number of atoms. You'll get this if you use `MyMol.na` or `MyMol['na']`. `ns` = The number of snapshots. You'll get this if you use `MyMol.ns` or `MyMol['ns']`.

Unit system: Angstroms.

Definition at line 595 of file molecule.py.

8.33.2 Constructor & Destructor Documentation

8.33.2.1 `def forcebalance.molecule.Molecule.__init__(self, fnm=None, ftype=None, build.topology=True)`

To create the [Molecule](#) object, we simply define the table of file reading/writing functions and read in a file if it is provided.

Definition at line 762 of file molecule.py.

8.33.3 Member Function Documentation

8.33.3.1 `def forcebalance.molecule.Molecule.__add__(self, other)`

Add method for [Molecule](#) objects.

Here is the call graph for this function:

8.33.3.5 def forcebalance.molecule.Molecule.__iadd__(self, other)

Add method for [Molecule](#) objects.

Definition at line 731 of file molecule.py.

Here is the call graph for this function:

8.33.3.6 def forcebalance.molecule.Molecule.__iter__(self)

List-like behavior for looping over trajectories.

Note that these values are returned by reference. Note that this is intended to be more efficient than `__getitem__`, so when we loop over a trajectory, it's best to go "for m in M" instead of "for i in range(len(M)): m = M[i]"

Definition at line 690 of file molecule.py.

Here is the call graph for this function:

8.33.3.7 def forcebalance.molecule.Molecule.__len__(self)

Return the number of frames in the trajectory.

Definition at line 599 of file molecule.py.

Here is the call graph for this function:

8.33.3.12 `def forcebalance.molecule.Molecule.align_by_moments (self)`

Align molecules using the "moment of inertia." Note that we're following the MSMBuilder convention of using all ones for the masses.

Definition at line 1031 of file molecule.py.

8.33.3.13 `def forcebalance.molecule.Molecule.align_center (self)`

Definition at line 1147 of file molecule.py.

8.33.3.14 `def forcebalance.molecule.Molecule.all_pairwise_rmsd (self)`

Find pairwise RMSD (super slow, not like the one in MSMBuilder.)

Definition at line 1131 of file molecule.py.

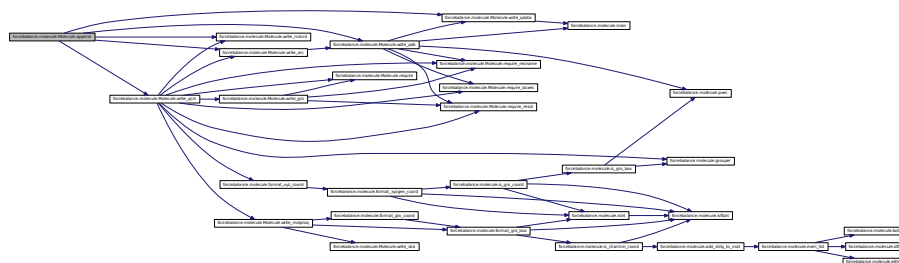

Here is the call graph for this function:

8.33.3.15 `def forcebalance.molecule.Molecule.append (self, other)`

Definition at line 755 of file molecule.py.

Here is the call graph for this function:

8.33.3.16 `def forcebalance.molecule.Molecule.atom_select (self, atomslice)`

Reurn a copy of the object with certain atoms selected.

Takes an integer, list or array as argument.

Definition at line 994 of file molecule.py.

Here is the call graph for this function:

8.33.3.17 `def forcebalance.molecule.Molecule.build_topology (self, sn=None, Fac=1.2)`

A bare-bones implementation of the bond graph capability in the nanoreactor code.

Returns a NetworkX graph that depicts the molecular topology, which might be useful for stuff. Provide, optionally, the frame number used to compute the topology.

Definition at line 1069 of file molecule.py.

Here is the call graph for this function:

8.33.3.18 `def forcebalance.molecule.Molecule.center_of_mass (self)`

Definition at line 901 of file molecule.py.

Here is the call graph for this function:

8.33.3.19 `def forcebalance.molecule.Molecule.edit_qcrems (self, in_dict, subcalc=None)`

Definition at line 935 of file molecule.py.

Here is the call graph for this function:

8.33.3.20 def forcebalance.molecule.Molecule.load_frames (self, fnm)

Definition at line 928 of file molecule.py.

8.33.3.21 def forcebalance.molecule.Molecule.measure_dihedrals (self, i, j, k, l)

Return a series of dihedral angles, given four atom indices numbered from zero.

Definition at line 1104 of file molecule.py.

Here is the call graph for this function:

8.33.3.22 def forcebalance.molecule.Molecule.openmm_boxes (self)

Returns the periodic box vectors in the [Molecule](#) object in a list of OpenMM-compatible boxes, so it is possible to type `simulation.context.setPeriodicBoxVectors(Mol.openmm_boxes()[0])` or something like that.

Definition at line 1173 of file molecule.py.

8.33.3.23 def forcebalance.molecule.Molecule.openmm_positions (self)

Returns the Cartesian coordinates in the [Molecule](#) object in a list of OpenMM-compatible positions, so it is possible to type `simulation.context.setPositions(Mol.openmm_positions()[0])` or something like that.

Definition at line 1156 of file molecule.py.

8.33.3.24 def forcebalance.molecule.Molecule.radius_of_gyration (self)

Definition at line 905 of file molecule.py.

Here is the call graph for this function:

8.33.3.25 `def forcebalance.molecule.Molecule.read_arc (self, fnm)`

Read a TINKER .arc file.

Parameters

| | | |
|-----------------|------------------|---------------------|
| <code>in</code> | <code>fnm</code> | The input file name |
|-----------------|------------------|---------------------|

Returns

`xyzs` A list for the XYZ coordinates.
`resid` The residue ID numbers. These are not easy to get!
`elem` A list of chemical elements in the XYZ file
`comms` A single-element list for the comment.
`tinkersuf` The suffix that comes after lines in the XYZ coordinates; this is usually topology info

Definition at line 1449 of file molecule.py.

Here is the call graph for this function:

8.33.3.26 `def forcebalance.molecule.Molecule.read_charmm (self, fnm)`

Read a CHARMM .cor (or .crd) file.

Definition at line 1563 of file molecule.py.

Here is the call graph for this function:

8.33.3.27 `def forcebalance.molecule.Molecule.read_com (self, fnm)`

Parse a Gaussian .com file and return a SINGLE-ELEMENT list of xyz coordinates (no multiple file support)

Parameters

| | | |
|-----------------|------------------|---------------------|
| <code>in</code> | <code>fnm</code> | The input file name |
|-----------------|------------------|---------------------|

Returns

elem A list of chemical elements in the XYZ file
comms A single-element list for the comment.
xyzs A single-element list for the XYZ coordinates.
charge The total charge of the system.
mult The spin multiplicity of the system.

Definition at line 1406 of file molecule.py.

Here is the call graph for this function:

```
8.33.3.28 def forcebalance.molecule.Molecule.read dcd ( self, fnm )
```

Definition at line 1367 of file molecule.py.

Here is the call graph for this function:

```
8.33.3.29 def forcebalance.molecule.Molecule.read_gro ( self, fnm )
```

Read a GROMACS .gro file.

Definition at line 1512 of file molecule.py.

Here is the call graph for this function:

```
8.33.3.30 def forcebalance.molecule.Molecule.read_mdcrd ( self, fnm )
```

Parse an AMBER .mdcrd file.

This requires at least the number of atoms. This will FAIL for monatomic trajectories (but who the heck makes those?)

Parameters

| | | |
|-----------------|------------------|---------------------|
| <code>in</code> | <code>fnm</code> | The input file name |
|-----------------|------------------|---------------------|

Returns

xyzs A list of XYZ coordinates (number of snapshots times number of atoms)
boxes Boxes (if present.)

Definition at line 1259 of file molecule.py.

Here is the call graph for this function:

8.33.3.31 `def forcebalance.molecule.Molecule.read_mol2 (self, fnm)`

Definition at line 1318 of file molecule.py.

Here is the call graph for this function:

8.33.3.32 `def forcebalance.molecule.Molecule.read_pdb (self, fnm)`

Loads a PDB and returns a dictionary containing its data.

Definition at line 1743 of file molecule.py.

Here is the call graph for this function:

8.33.3.33 `def forcebalance.molecule.Molecule.read_qcesp (self, fnm)`

Definition at line 1804 of file molecule.py.

```
8.33.3.34 def forcebalance.molecule.Molecule.read_qcin ( self, fnm )
```

Read a Q-Chem input file.

These files can be very complicated, and I can't write a completely general parser for them. It is important to keep our goal in mind:

- 1) The main goal is to convert a trajectory to Q-Chem input files with identical calculation settings.
- 2) When we print the Q-Chem file, we should preserve the line ordering of the 'rem' section, but also be able to add 'rem' options at the end.
- 3) We should accommodate the use case that the Q-Chem file may have follow-up calculations delimited by '@@'.
- 4) We can read in all of the xyz's as a trajectory, but only the Q-Chem settings belonging to the first xyz will be saved.

Definition at line 1631 of file molecule.py.

Here is the call graph for this function:

```
8.33.35 def forcebalance.molecule.Molecule.read_qcout( self, fnm )
```

Q-Chem output file reader, adapted for our parser.

Q-Chem output files are very flexible and there's no way I can account for all of them. Here's what I am able to account for:

A list of:

- Coordinates
- Energies
- Forces

Note that each step in a geometry optimization counts as a frame.

As with all Q-Chem output files, note that successive calculations can have different numbers of atoms.

Definition at line 1833 of file molecule.py.

Here is the call graph for this function:

8.33.3.36 `def forcebalance.molecule.Molecule.read_qdata (self, fnm)`

Definition at line 1283 of file molecule.py.

8.33.3.37 `def forcebalance.molecule.Molecule.read_xyz (self, fnm)`

Parse a .xyz file which contains several xyz coordinates, and return their elements.

Parameters

| | | |
|-----------|------------|---------------------|
| <i>in</i> | <i>fnm</i> | The input file name |
|-----------|------------|---------------------|

Returns

elem A list of chemical elements in the XYZ file

comms A list of comments.

xyzs A list of XYZ coordinates (number of snapshots times number of atoms)

Definition at line 1214 of file molecule.py.

Here is the call graph for this function:

8.33.3.38 `def forcebalance.molecule.Molecule.replace_peratom (self, key, orig, want)`

Replace all of the data for a certain attribute in the system from orig to want.

Definition at line 973 of file molecule.py.

8.33.3.39 `def forcebalance.molecule.Molecule.replace_peratom_conditional (self, key1, cond, key2, orig, want)`

Replace all of the data for a attribute key2 from orig to want, contingent on key1 being equal to cond.

For instance: replace H1 with H2 if rename is SOL.

Definition at line 984 of file molecule.py.

Here is the call graph for this function:

8.33.3.40 `def forcebalance.molecule.Molecule.require (self, args)`

Definition at line 852 of file molecule.py.

8.33.3.41 `def forcebalance.molecule.Molecule.require_boxes (self)`

Definition at line 2271 of file molecule.py.

8.33.3.42 `def forcebalance.molecule.Molecule.require_resid (self)`

Definition at line 2258 of file molecule.py.

8.33.3.43 `def forcebalance.molecule.Molecule.require_resname (self)`

Definition at line 2266 of file molecule.py.

8.33.3.44 `def forcebalance.molecule.Molecule.split (self, fnm = None, ftype = None, method = "chunks", num = None)`

Split the molecule object into a number of separate files (chunks), either by specifying the number of frames per chunk or the number of chunks.

Only relevant for "trajectories". The type of file may be specified; if they aren't specified then the original file type is used.

The output file names are [name].[numbers].[extension] where [name] can be specified by passing 'fnm' or taken from the object's 'fnm' attribute by default. [numbers] are integers ranging from the lowest to the highest chunk number, prepended by zeros.

If the number of chunks / frames is not specified, then one file is written for each frame.

Returns

fnms A list of the file names that were written.

Definition at line 1196 of file molecule.py.

Here is the call graph for this function:

8.33.3.45 `def forcebalance.molecule.Molecule.write (self, fnm=None, ftype=None, append=False, select=None)`

Definition at line 867 of file molecule.py.

Here is the call graph for this function:

8.33.3.46 `def forcebalance.molecule.Molecule.write_arc (self, select)`

Definition at line 2090 of file molecule.py.

Here is the call graph for this function:

8.33.3.47 `def forcebalance.molecule.Molecule.write_dcd (self, select)`

Definition at line 2126 of file molecule.py.

8.35 forcebalance.moments.Moments Class Reference

Subclass of Target for fitting force fields to multipole moments (from experiment or theory).

Inheritance diagram for forcebalance.moments.Moments:

Collaboration diagram for forcebalance.moments.Moments:

Public Member Functions

- `def __init__`
Initialization.
- `def read_reference_data`
Read the reference data from a file.
- `def prepare_temp_directory`
Prepare the temporary directory.
- `def indicate`
Print qualitative indicator.
- `def unpack_moments`
- `def get`
Evaluate objective function.

Public Attributes

- `denoms`
- `mfnm`
The mdata.txt file that contains the moments.
- `ref_moments`
- `na`
Number of atoms.
- `ref_eigvals`
- `ref_eigvecs`
- `calc_moments`
- `objective`

8.35.1 Detailed Description

Subclass of Target for fitting force fields to multipole moments (from experiment or theory).

Currently Tinker is supported.

Definition at line 27 of file moments.py.

8.35.2 Constructor & Destructor Documentation

8.35.2.1 `def forcebalance.moments.Moments.__init__(self, options, tgt_opts, forcefield)`

Initialization.

Reimplemented from [forcebalance.target.Target](#).

Reimplemented in [forcebalance.tinkerio.Moments_TINKER](#).

Definition at line 32 of file moments.py.

Obtain the denominator.
- [ObjDict](#)
- [ObjDict_Last](#)

8.39.1 Detailed Description

[Objective](#) function.

The objective function is a combination of contributions from the different fitting targets. Basically, it loops through the targets, gets their contributions to the objective function and then sums all of them (although more elaborate schemes are conceivable). The return value is the same data type as calling the target itself: a dictionary containing the objective function, the gradient and the Hessian.

The penalty function is also computed here; it keeps the parameters from straying too far from their initial values.

Parameters

| | | |
|--------------------|--------------|--|
| in | <i>mvals</i> | The mathematical parameters that enter into computing the objective function |
| in | <i>Order</i> | The requested order of differentiation |

Definition at line 105 of file objective.py.

8.41.1 Detailed Description

[Optimizer](#) class.

Contains several methods for numerical optimization.

For various reasons, the optimizer depends on the force field and fitting targets (i.e. we cannot treat it as a fully independent numerical optimizer). The dependency is rather weak which suggests that I can remove it someday.

Definition at line 42 of file optimizer.py.

8.41.2 Constructor & Destructor Documentation

8.41.2.1 `def forcebalance.optimizer.Optimizer.__init__(self, options, Objective, FF)`

Create an [Optimizer](#) object.

The optimizer depends on both the FF and the fitting targets so there is a chain of dependencies: FF --> FitSim --> [Optimizer](#), and FF --> [Optimizer](#)

Here's what we do:

- Take options from the parser
- Pass in the objective function, force field, all fitting targets

Definition at line 55 of file optimizer.py.

8.41.3 Member Function Documentation

8.41.3.1 `def forcebalance.optimizer.Optimizer.Annal (self)`

Use SciPy's built-in simulated annealing algorithm to optimize the parameters.

See also

[Optimizer::ScipyOptimizer](#)

Definition at line 780 of file optimizer.py.

8.41.3.2 `def forcebalance.optimizer.Optimizer.BFGS (self)`

Optimize the force field parameters using the BFGS method; currently the recommended choice (.

See also

[MainOptimizer](#))

Definition at line 600 of file optimizer.py.

8.41.3.3 `def forcebalance.optimizer.Optimizer.ConjugateGradient (self)`

Use SciPy's built-in simulated annealing algorithm to optimize the parameters.

See also

[Optimizer::ScipyOptimizer](#)

Definition at line 785 of file optimizer.py.

8.41.3.4 `def forcebalance.optimizer.Optimizer.FDCheckG (self)`

Finite-difference checker for the objective function gradient.

For each element in the gradient, use a five-point finite difference stencil to compute a finite-difference derivative, and compare it to the analytic result.

Definition at line 881 of file optimizer.py.

Here is the call graph for this function:

8.41.3.5 `def forcebalance.optimizer.Optimizer.FDCheckH (self)`

Finite-difference checker for the objective function Hessian.

For each element in the Hessian, use a five-point stencil in both parameter indices to compute a finite-difference derivative, and compare it to the analytic result.

This is meant to be a foolproof checker, so it is pretty slow. We could write a faster checker if we assumed we had accurate first derivatives, but it's better to not make that assumption.

The second derivative is computed by double-wrapping the objective function via the 'wrap2' function.

Definition at line 913 of file optimizer.py.

Here is the call graph for this function:

8.41.3.6 def forcebalance.optimizer.Optimizer.GeneticAlgorithm (self)

Genetic algorithm, under development.

It currently works but a genetic algorithm is more like a concept; i.e. there is no single way to implement it.

Todo Massive parallelization hasn't been implemented yet

Definition at line 677 of file optimizer.py.

Here is the call graph for this function:

8.41.3.7 def forcebalance.optimizer.Optimizer.Gradient (self)

A single-point gradient computation.

Definition at line 859 of file optimizer.py.

Here is the call graph for this function:

```
8.41.3.8 def forcebalance.optimizer.Optimizer.Hessian ( self )
```

A single-point Hessian computation.

Definition at line 867 of file optimizer.py.

Here is the call graph for this function:

8.41.3.9 def forcebalance.optimizer.Optimizer.MainOptimizer (self, b_BFGS = 0)

The main ForceBalance adaptive trust-radius pseudo-Newton optimizer.

Tried and true in many situations. :)

Usually this function is called with the BFGS or NewtonRaphson method. The NewtonRaphson method is consistently the best method I have, because I always provide at least an approximate Hessian to the objective function. The BFGS method is vestigial and currently does not work.

BFGS is a pseudo-Newton method in the sense that it builds an approximate Hessian matrix from the gradient information in previous steps; Newton-Raphson requires the actual Hessian matrix. However, the algorithms are similar in that they both compute the step by inverting the Hessian and multiplying by the gradient.

The method adaptively changes the step size. If the step is sufficiently good (i.e. the objective function goes down by a large fraction of the predicted decrease), then the step size is increased; if the step is bad, then it rejects the step and tries again.

The optimization is terminated after either a function value or step size tolerance is reached.

Parameters

| | | |
|----|--------|---|
| in | b_BFGS | Switch to use BFGS (True) or Newton-Raphson (False) |
|----|--------|---|

Definition at line 228 of file optimizer.py.

8.41.3.10 def forcebalance.optimizer.Optimizer.NewtonRaphson (self)

Optimize the force field parameters using the Newton-Raphson method (.

See also

[MainOptimizer](#))

Definition at line 595 of file optimizer.py.

Here is the call graph for this function:

8.41.3.11 def forcebalance.optimizer.Optimizer.Powell (self)

Use SciPy's built-in Powell direction-set algorithm to optimize the parameters.

See also

[Optimizer::ScipyOptimizer](#)

Definition at line 775 of file optimizer.py.

8.41.3.12 def forcebalance.optimizer.Optimizer.readchk (self)

Read the checkpoint file for the main optimizer.

Definition at line 941 of file optimizer.py.

8.41.3.13 def forcebalance.optimizer.Optimizer.Run (self)

Call the appropriate optimizer.

This is the method we might want to call from an executable.

Definition at line 166 of file optimizer.py.

Here is the call graph for this function:

8.41.3.14 def forcebalance.optimizer.Optimizer.Scan_Values (self, MathPhys = 1)

Scan through parameter values.

This option is activated using the inputs:

```
scan[mp]vals
scan_vals low:hi:nsteps
scan_idxnum (number) -or-
scan_idxname (name)
```

This method goes to the specified parameter indices and scans through the supplied values, evaluating the objective function at every step.

I hope this method will be useful for people who just want to look at changing one or two parameters and seeing how it affects the force field performance.

Todo Maybe a multidimensional grid can be done.

Parameters

| | | |
|----|-----------------|---|
| in | <i>MathPhys</i> | Switch to use mathematical (True) or physical (False) parameters. |
|----|-----------------|---|

Definition at line 811 of file optimizer.py.

Here is the call graph for this function:

8.41.3.15 def forcebalance.optimizer.Optimizer.ScanMVals (self)

Scan through the mathematical parameter space.

See also

Optimizer::ScanValues

Definition at line 843 of file optimizer.py.

Here is the call graph for this function:

8.41.3.16 def forcebalance.optimizer.Optimizer.ScanPVals (self)

Scan through the physical parameter space.

See also

Optimizer::ScanValues

Definition at line 848 of file optimizer.py.

8.41.3.17 def forcebalance.optimizer.Optimizer.ScipyOptimizer (self, Algorithm = "None")

Driver for SciPy optimizations.

Using any of the SciPy optimizers requires that SciPy is installed. This method first defines several wrappers around the objective function that the SciPy optimizers can use. Then it calls the algorithm itself.

Parameters

| | | |
|----|------------------|--|
| in | <i>Algorithm</i> | The optimization algorithm to use, for example 'powell', 'simplex' or 'anneal' |
|----|------------------|--|

Definition at line 613 of file optimizer.py.

Here is the call graph for this function:

```
8.41.3.18 def forcebalance.optimizer.Optimizer.Simplex( self )
```

Use SciPy's built-in simplex algorithm to optimize the parameters.

See also

Optimizer::ScipyOptimizer

Definition at line 770 of file optimizer.py.

Here is the call graph for this function:

```
8.41.3.19 def forcebalance.optimizer.Optimizer.SinglePoint( self )
```

A single-point objective function computation.

Definition at line 853 of file optimizer.py.

Here is the call graph for this function:

```
8.41.3.20 def forcebalance.optimizer.Optimizer.step ( self, xk, data, trust )
```

Computes the next step in the parameter space.

There are lots of tricks here that I will document later.

Parameters

| | | |
|----|---------|------------------|
| in | G | The gradient |
| in | H | The Hessian |
| in | $trust$ | The trust radius |

Definition at line 420 of file optimizer.py.

```
8.41.3.21 def forcebalance.optimizer.Optimizer.writechk( self )
```

Write the checkpoint file for the main optimizer.

Definition at line 953 of file optimizer.py.

8.42.1 Detailed Description

[Penalty](#) functions for regularizing the force field optimizer.

The purpose for this module is to improve the behavior of our optimizer; essentially, our problem is fraught with 'linear dependencies', a.k.a. directions in the parameter space that the objective function does not respond to. This would happen if a parameter is just plain useless, or if there are two or more parameters that describe the same thing.

To accomplish these objectives, a penalty function is added to the objective function. Generally, the more the parameters change (i.e. the greater the norm of the parameter vector), the greater the penalty. Note that this is added on after all of the other contributions have been computed. This only matters if the penalty 'multiplies' the objective function: $\text{Obj} + \text{Obj} * \text{Penalty}$, but we also have the option of an additive penalty: $\text{Obj} + \text{Penalty}$.

Statistically, this is called regularization. If the penalty function is the norm squared of the parameter vector, it is called ridge regression. There is also the option of using simply the norm, and this is called lasso, but I think it presents problems for the optimizer that I need to work out.

Note that the penalty functions can be considered as part of a 'maximum likelihood' framework in which we assume a PRIOR PROBABILITY of the force field parameters around their initial values. The penalty function is related to the prior by an exponential. Ridge regression corresponds to a Gaussian prior and lasso corresponds to an exponential prior. There is also 'elastic net regression' which interpolates between Gaussian and exponential using a tuning parameter.

Our priors are adjustable too - there is one parameter, which is the width of the distribution. We can even use a noninformative prior for the distribution widths (hyperprior!). These are all important things to consider later.

Importantly, note that here there is no code that treats the distribution width. That is because the distribution width is wrapped up in the rescaling factors, which is essentially a coordinate transformation on the parameter space. More documentation on this will follow, perhaps in the 'rsmake' method.

Definition at line 304 of file objective.py.

8.42.2 Constructor & Destructor Documentation

8.42.2.1 `def forcebalance.objective.Penalty.__init__(self, User.Option, ForceField, Factor_Add = 0.0, Factor_Mult = 0.0, Factor_B = 0.1, Alpha = 1.0)`

Definition at line 310 of file objective.py.

8.42.3 Member Function Documentation

8.42.3.1 `def forcebalance.objective.Penalty.compute(self, mvals, Objective)`

Definition at line 336 of file objective.py.

Here is the call graph for this function:

8.42.3.2 def forcebalance.objective.Penalty.FUSE (self, mvals)

Definition at line 396 of file objective.py.

Here is the call graph for this function:

8.42.3.3 def forcebalance.objective.Penalty.FUSE_BARRIER (self, mvals)

Definition at line 437 of file objective.py.

Here is the call graph for this function:

8.42.3.4 def forcebalance.objective.Penalty.FUSE_L0 (self, mvals)

Definition at line 479 of file objective.py.

Here is the call graph for this function:

8.42.3.5 def forcebalance.objective.Penalty.HYP (self, mvals)

Hyperbolic constraints.

Depending on the 'b' parameter, the smaller it is, the closer we are to an L1-norm constraint. If we use these, we expect a properly-behaving optimizer to make several of the parameters very nearly zero (which would be cool).

Parameters

| | | |
|----|-------|----------------------|
| in | mvals | The parameter vector |
|----|-------|----------------------|

Returns

- DC0 The hyperbolic penalty
- DC1 The gradient
- DC2 The Hessian

Definition at line 388 of file objective.py.

Here is the call graph for this function:

8.42.3.6 def forcebalance.objective.Penalty.L2_norm (self, mvals)

Harmonic L2-norm constraints.

These are the ones that I use the most often to regularize my optimization.

Parameters

| | | |
|----|-------|----------------------|
| in | mvals | The parameter vector |
|----|-------|----------------------|

Returns

- DC0 The norm squared of the vector
- DC1 The gradient of DC0
- DC2 The Hessian (just a constant)

Definition at line 368 of file objective.py.

Here is the call graph for this function:

Counts how often the Hessian was computed.

8.46.1 Detailed Description

Base class for all fitting targets.

In ForceBalance a [Target](#) is defined as a set of reference data plus a corresponding method to simulate that data using the force field.

The 'computable quantities' may include energies and forces where the reference values come from QM calculations (energy and force matching), energies from an EDA analysis (Maybe in the future, FDA?), molecular properties (like polarizability, refractive indices, multipole moments or vibrational frequencies), relative entropies, and bulk properties. Single-molecule or bulk properties can even come from the experiment!

The central idea in ForceBalance is that each quantity makes a contribution to the overall objective function. So we can build force fields that fit several quantities at once, rather than putting all of our chips behind energy and force matching. In the future ForceBalance may even include multiobjective optimization into the optimizer.

The optimization is done by way of minimizing an 'objective function', which is comprised of squared differences between the computed and reference values. These differences are not computed in this file, but rather in subclasses that use [Target](#) as a base class. Thus, the contents of [Target](#) itself are meant to be as general as possible, because the pertinent variables apply to all types of fitting targets.

An important node: [Target](#) requires that all subclasses have a method `get(self,mvals,AGrad=False,AHess=False)` that does the following:

Inputs: mvals = The parameter vector, which modifies the force field (Note to self: We include mvals with each [Target](#) because we can create copies of the force field and do finite difference derivatives) AGrad, AHess = Boolean switches for computing analytic gradients and Hessians

Outputs: Answer = {'X': Number, 'G': numpy.array(np), 'H': numpy.array((np,np)) } 'X' = The objective function itself 'G' = The gradient, elements not computed analytically are zero 'H' = The Hessian, elements not computed analytically are zero

This is the only global requirement of a [Target](#). Obviously 'get' itself is not defined here, because its calculation will depend entirely on specifically which target we wish to use. However, this should give us a unified framework which will facilitate rapid implementation of Targets.

Future work: Robert suggested that I could enable automatic detection of which parameters need to be computed by finite difference. Not a bad idea. :)

Definition at line 72 of file target.py.

8.46.2 Constructor & Destructor Documentation

8.46.2.1 def forcebalance.target.Target.__init__(self, options, tgt_opts, forcefield)

All options here are intended to be usable by every conceivable type of target (in other words, only add content here if it's widely applicable.)

If we want to add attributes that are more specific (i.e. a set of reference forces for force matching), they are added in the subclass AbInitio that inherits from [Target](#).

Reimplemented in [forcebalance.tinkerio.Interaction_TINKER](#), [forcebalance.gmxio.Interaction_GMX](#), [forcebalance.tinkerio.BindingEnergy_TINKER](#), [forcebalance.openmmio.Interaction_OpenMM](#), [forcebalance.tinkerio.Moments_TINKER](#), [forcebalance.gmxio.AbInitio_GMX](#), [forcebalance.openmmio.AbInitio_OpenMM](#), [forcebalance.psi4io.RDVR3_Psi4](#), [forcebalance.tinkerio.AbInitio_TINKER](#), [forcebalance.openmmio.Liquid_OpenMM](#), [forcebalance.tinkerio.Liquid_TINKER](#), [forcebalance.amberio.AbInitio_AMBER](#), [forcebalance.gmxqpio.Monomer_QTPIE](#), [forcebalance.binding.BindingEnergy](#), [forcebalance.psi4io.THCDF_Psi4](#), [forcebalance.liquid.Liquid](#), [forcebalance.abinitio.AbInitio](#), [forcebalance.abinitio_internal.AbInitio_Internal](#), [forcebalance.counterpoise.Counterpoise](#), [forcebalance.interaction.Interaction](#), [forcebalance.leastsq.LeastSquares](#), [forcebalance.moments.Moments](#), and [forcebalance.vibration.Vibration](#).

Definition at line 89 of file target.py.

Here is the call graph for this function:

8.46.3 Member Function Documentation

8.46.3.1 def forcebalance.target.Target.get(self, mvals, AGrad=False, AHess=False)

Every target must be able to return a contribution to the objective function - however, this must be implemented in the specific subclass.

See abinitio for an example.

Reimplemented in [forcebalance.abinitio.AbInitio](#), [forcebalance.psi4io.RDVR3_Psi4](#), [forcebalance.liquid.Liquid](#), [forcebalance.gmxqpio.Monomer_QTPIE](#), [forcebalance.moments.Moments](#), [forcebalance.binding.BindingEnergy](#),

Here is the call graph for this function:

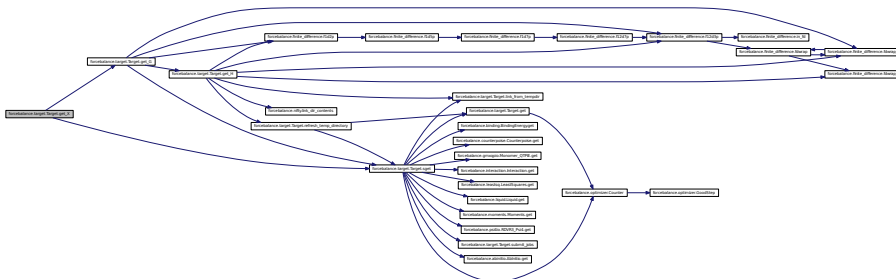

8.46.3.4 def forcebalance.target.Target.get_X(self, mvals = None)

Computes the objective function contribution without any parametric derivatives.

Definition at line 152 of file target.py.

Here is the call graph for this function:

8.46.3.5 def forcebalance.target.Target.link_from_tempdir(self, absdestdir)

Definition at line 210 of file target.py.

8.46.3.6 def forcebalance.target.Target.printcool_table(self, data = OrderedDict([]), headings = [], banner = None, footnote = None, color = 0)

Print target information in an organized table format.

Implemented 6/30 because multiple targets are already printing out tabulated information in very similar ways. This method is a simple wrapper around printcool_dictionary.

The input should be something like:

Parameters

| | |
|-----------------|---|
| <i>data</i> | Column contents in the form of an OrderedDict, with string keys and list vals. The key is printed in the leftmost column and the vals are printed in the other columns. If non-strings are passed, they will be converted to strings (not recommended). |
| <i>headings</i> | Column headings in the form of a list. It must be equal to the number to the list length for each of the "vals" in OrderedDict, plus one. Use "\n" characters to specify long column names that may take up more than one line. |

| | |
|-----------------|---|
| <i>banner</i> | Optional heading line, which will be printed at the top in the title. |
| <i>footnote</i> | Optional footnote line, which will be printed at the bottom. |

Definition at line 364 of file target.py.

Here is the call graph for this function:

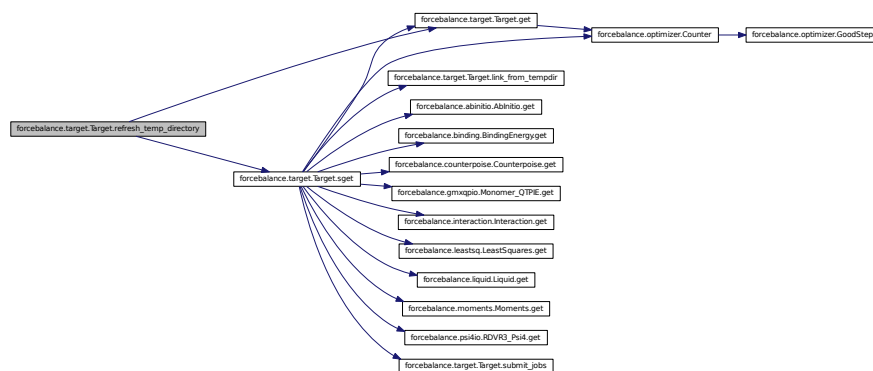

8.46.3.7 def forcebalance.target.Target.refresh_temp_directory (self)

Back up the temporary directory if desired, delete it and then create a new one.

Definition at line 216 of file target.py.

Here is the call graph for this function:

8.46.3.8 def forcebalance.target.Target.sget (self, mvals, AGrad=False, AHess=False, customdir=None)

Stages the directory for the target, and then calls 'get'.

The 'get' method should not worry about the directory that it's running in.

Definition at line 263 of file target.py.

Here is the call graph for this function:

8.46.3.9 `def forcebalance.target.Target.stage (self, mvals, AGrad=False, AHess=False, customdir=None)`

Stages the directory for the target, and then launches Work Queue processes if any.

The 'get' method should not worry about the directory that it's running in.

Definition at line 298 of file target.py.

Here is the call graph for this function:

8.46.3.10 `def forcebalance.target.Target.submit_jobs (self, mvals, AGrad=False, AHess=False)`

Reimplemented in [forcebalance.liquid.Liquid](#).

Definition at line 288 of file target.py.

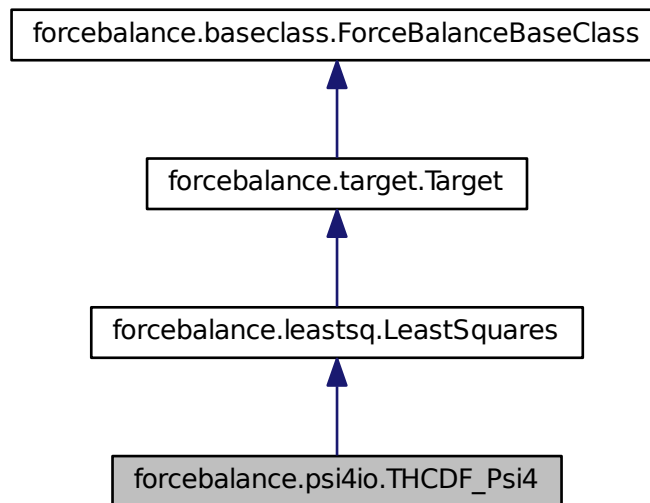

8.46.3.11 `def forcebalance.target.Target.wq_complete (self)`

This method determines whether the Work Queue tasks for the current target have completed.

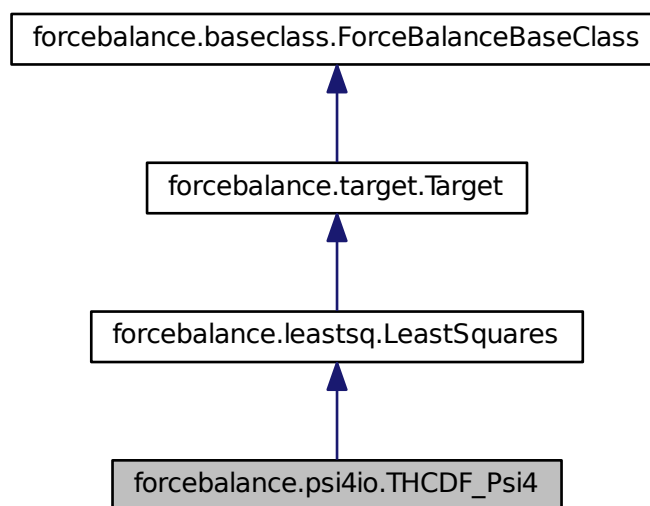

Definition at line 328 of file target.py.

8.48 forcebalance.tinkerio.Tinker_Reader Class Reference

Finite state machine for parsing TINKER force field files.

Inheritance diagram for forcebalance.tinkerio.Tinker_Reader:

Collaboration diagram for forcebalance.tinkerio.Tinker_Reader:

Public Member Functions

- `def __init__`
- `def feed`

Given a line, determine the interaction type and the atoms involved (the suffix).

Public Attributes

- `pdict`
The parameter dictionary (defined in this file)
- `atom`
The atom numbers in the interaction (stored in the TINKER parser)
- `itype`
- `suffix`

8.48.1 Detailed Description

Finite state machine for parsing TINKER force field files.

This class is instantiated when we begin to read in a file. The `feed(line)` method updates the state of the machine, informing it of the current interaction type. Using this information we can look up the interaction type and parameter type for building the parameter ID.

Definition at line 65 of file `tinkerio.py`.

8.48.2 Constructor & Destructor Documentation

8.48.2.1 `def forcebalance.tinkerio.Tinker_Reader.__init__(self, fnm)`

Reimplemented from [forcebalance.basereader.BaseReader](#).

Definition at line 67 of file `tinkerio.py`.

8.48.3 Member Function Documentation

8.48.3.1 `def forcebalance.tinkerio.Tinker_Reader.feed(self, line)`

Given a line, determine the interaction type and the atoms involved (the suffix).

TINKER generally has stuff like this:

```

bond-cubic          -2.55
bond-quartic        3.793125

vdw      1          3.4050    0.1100
vdw      2          2.6550    0.0135    0.910 # PARM 4

multipole    2      1      2          0.25983
              -0.03859    0.00000    -0.05818
              -0.03673
              0.00000    -0.10739
              -0.00203    0.00000    0.14412

```

The '#PARM 4' has no effect on TINKER but it indicates that we are tuning the fourth field on the line (the 0.910 value).

Todo Put the rescaling factors for TINKER parameters in here. Currently we're using the initial value to determine the rescaling factor which is not very good.

Every parameter line is prefaced by the interaction type except for 'multipole' which is on multiple lines. Because the lines that come after 'multipole' are predictable, we just determine the current line using the previous line.

Random note: Unit of force is kcal / mole / angstrom squared.

Reimplemented from [forcebalance.basereader.BaseReader](#).

Definition at line 108 of file `tinkerio.py`.

- tuple `forcebalance::chemistry.bo` = `BondChars.index(re.findall('[-=3]', line.split()[0])[0])`

9.10 contact.py File Reference

Packages

- namespace `forcebalance::contact`

Functions

- def `forcebalance::contact.atom_distances`
For each frame in xyzlist, compute the (euclidean) distance between pairs of atoms whos indices are given in contacts.
- def `forcebalance::contact.residue_distances`
For each frame in xyzlist, and for each pair of residues in the array contact, compute the distance between the closest pair of atoms such that one of them belongs to each residue.

9.11 counterpoise.py File Reference

Classes

- class `forcebalance.counterpoise.Counterpoise`
Target subclass for matching the counterpoise correction.

Packages

- namespace `forcebalance::counterpoise`
Match an empirical potential to the counterpoise correction for basis set superposition error (BSSE).

9.12 custom_io.py File Reference

Classes

- class `forcebalance.custom_io.Gen_Reader`
Finite state machine for parsing custom GROMACS force field files.

Packages

- namespace `forcebalance::custom_io`
Custom force field parser.

Variables

- list `forcebalance::custom_io.cptypes` = [None, 'CPGAUSS', 'CPEXP', 'CPGEXP']
Types of counterpoise correction.
- list `forcebalance::custom_io.ndtypes` = [None]
Types of NDDO correction.
- dictionary `forcebalance::custom_io.fdict`
Section -> Interaction type dictionary.
- dictionary `forcebalance::custom_io.pdict`
Interaction type -> Parameter Dictionary.

9.13 finite_difference.py File Reference

Packages

- namespace `forcebalance::finite_difference`

Functions

- def `forcebalance::finite_difference.f1d2p`
A two-point finite difference stencil.
- def `forcebalance::finite_difference.f1d5p`
A highly accurate five-point finite difference stencil for computing derivatives of a function.
- def `forcebalance::finite_difference.f1d7p`
A highly accurate seven-point finite difference stencil for computing derivatives of a function.
- def `forcebalance::finite_difference.f1d2d7p`
- def `forcebalance::finite_difference.f1d2d3p`
A three-point finite difference stencil.
- def `forcebalance::finite_difference.in_fd`
Invoking this function from anywhere will tell us whether we're being called by a finite-difference function.
- def `forcebalance::finite_difference.fdwrap`
A function wrapper for finite difference designed for differentiating 'get'-type functions.
- def `forcebalance::finite_difference.fdwrap_G`
A driver to fdwrap for gradients (see documentation for fdwrap) Inputs: tgt = The Target containing the objective function that we want to differentiate mvals0 = The 'central' values of the mathematical parameters - i.e.

- def [forcebalance::finite_difference.fdwrap_H](#)

A driver to fdwrap for Hessians (see documentation for fdwrap) Inputs: tgt = The Target containing the objective function that we want to differentiate mvals0 = The 'central' values of the mathematical parameters - i.e.

9.14 forcefield.py File Reference

Classes

- class [forcebalance.forcefield.BackedUpDict](#)
- class [forcebalance.forcefield.FF](#)

Force field class.

Packages

- namespace [forcebalance::forcefield](#)

Force field module.

Functions

- def [forcebalance::forcefield.determine_fftype](#)

Determine the type of a force field file.

- def [forcebalance::forcefield.rs_override](#)

This function takes in a dictionary (rsfactors) and a string (termtype).

Variables

- dictionary [forcebalance::forcefield.FF_Extensions](#)
- dictionary [forcebalance::forcefield.FF_IOModules](#)

9.15 gmxml.py File Reference

Classes

- class [forcebalance.gmxml.OTP_Reader](#)

Finite state machine for parsing GROMACS force field files.

- class [forcebalance.gmxml.AbInitio_GMX](#)

Subclass of AbInitio for force and energy matching using normal GROMACS.

- class [forcebalance.gmxml.Interaction_GMX](#)

Subclass of Interaction for interaction energy matching using GROMACS.

Packages

- namespace [forcebalance::gmxml](#)

GROMACS input/output.

Functions

- def [forcebalance::gmxio.parse_atomtype_line](#)
Parses the 'atomtype' line.
- def [forcebalance::gmxio.rm_gmx_baks](#)

Variables

- list [forcebalance::gmxio.nftypes](#) = [None, 'VDW', 'VDW_BHAM']
VdW interaction function types.
- list [forcebalance::gmxio.pftypes](#) = [None, 'VPAIR', 'VPAIR_BHAM']
Pairwise interaction function types.
- list [forcebalance::gmxio.bftypes](#) = [None, 'BONDS', 'G96BONDS', 'MORSE']
Bonded interaction function types.
- list [forcebalance::gmxio.aftypes](#)
Angle interaction function types.
- list [forcebalance::gmxio.dftypes](#) = [None, 'PDIHS', 'IDIHS', 'RBDIHS', 'PIMPDIHS', 'FOURDIHS', None, None, 'TABDIHS', 'PDIHMULS']
Dihedral interaction function types.
- dictionary [forcebalance::gmxio.fdict](#)
Section -> Interaction type dictionary.
- dictionary [forcebalance::gmxio.pdict](#)
Interaction type -> Parameter Dictionary.

9.16 gmxqpio.py File Reference

Classes

- class [forcebalance.gmxqpio.Monomer_QTPIE](#)
Subclass of Target for monomer properties of QTPIE (implemented within gromacs WCV branch).

Packages

- namespace [forcebalance::gmxqpio](#)
- namespace [forcebalance::gmxio](#)
GROMACS input/output.

Functions

- def [forcebalance::gmxqpio.get_monomer_properties](#)

9.17 interaction.py File Reference

Classes

- class [forcebalance.interaction.Interaction](#)
Subclass of Target for fitting force fields to interaction energies.

Packages

- namespace `forcebalance::interaction`
Interaction energy fitting module.

9.18 leastsq.py File Reference

Classes

- class `forcebalance.leastsq.LeastSquares`
Subclass of Target for general least squares fitting.

Packages

- namespace `forcebalance::leastsq`
- namespace `forcebalance::abinitio`
Ab-initio fitting module (energies, forces, resp).

Functions

- def `forcebalance::leastsq.CheckBasis`
- def `forcebalance::leastsq.LastMvals`

Variables

- `forcebalance::leastsq.CHECK_BASIS` = False
- `forcebalance::leastsq.LAST_MVALS` = None

9.19 liquid.py File Reference

Classes

- class `forcebalance.liquid.Liquid`
Subclass of Target for liquid property matching.

Packages

- namespace `forcebalance::liquid`
Matching of liquid bulk properties.

Functions

- def `forcebalance::liquid.weight_info`

9.20 Mol2.py File Reference

Classes

- class [forcebalance.Mol2.mol2_atom](#)
This is to manage [mol2](#) atomic lines on the form: 1 C1 5.4790 42.2880 49.5910 C.ar 1 <1> 0.0424.
- class [forcebalance.Mol2.mol2_bond](#)
This is to manage [mol2](#) bond lines on the form: 1 1 2 ar.
- class [forcebalance.Mol2.mol2](#)
This is to manage one [mol2](#) series of lines on the form:
- class [forcebalance.Mol2.mol2_set](#)

Packages

- namespace [forcebalance::Mol2](#)

Variables

- tuple [forcebalance::Mol2.data](#) = [mol2_set](#)(sys.argv[1], subset=["RNAse.xray.inh8.1QHC"])

9.21 mol2io.py File Reference

Classes

- class [forcebalance.mol2io.Mol2_Reader](#)
Finite state machine for parsing [Mol2](#) force field file.

Packages

- namespace [forcebalance::mol2io](#)
[Mol2](#) I/O.

Variables

- dictionary [forcebalance::mol2io.mol2_pdict](#) = {'COUL':{'Atom':[1], 6:'''}}

9.22 molecule.py File Reference

Classes

- class [forcebalance.molecule.MyG](#)
- class [forcebalance.molecule.MolfileTimestep](#)
Wrapper for the timestep C structure used in molfile plugins.
- class [forcebalance.molecule.Molecule](#)
Lee-Ping's general file format conversion class.

Packages

- namespace `forcebalance::molecule`

Functions

- def `forcebalance::molecule.getElement`
- def `forcebalance::molecule.nodematch`
- def `forcebalance::molecule.isint`
ONLY matches integers! If you have a decimal point? None shall pass!
- def `forcebalance::molecule.isfloat`
Matches ANY number; it can be a decimal, scientific notation, integer, or what have you.
- def `forcebalance::molecule.format_xyz_coord`
Print a line consisting of (element, x, y, z) in accordance with .xyz file format.
- def `forcebalance::molecule.format_gro_coord`
Print a line in accordance with .gro file format, with six decimal points of precision.
- def `forcebalance::molecule.format_xyzgen_coord`
Print a line consisting of (element, p, q, r, s, t, ...) where (p, q, r) are arbitrary atom-wise data (this might happen, for instance, with atomic charges)
- def `forcebalance::molecule.format_gro_box`
Print a line corresponding to the box vector in accordance with .gro file format.
- def `forcebalance::molecule.is_gro_coord`
Determines whether a line contains GROMACS data or not.
- def `forcebalance::molecule.is_charmm_coord`
Determines whether a line contains CHARMM data or not.
- def `forcebalance::molecule.is_gro_box`
Determines whether a line contains a GROMACS box vector or not.
- def `forcebalance::molecule.add_strip_to_mat`
- def `forcebalance::molecule.pvec`
- def `forcebalance::molecule.grouper`
Groups a big long iterable into groups of ten or what have you.
- def `forcebalance::molecule.even_list`
Creates a list of number sequences divided as evenly as possible.
- def `forcebalance::molecule.both`
- def `forcebalance::molecule.diff`
- def `forcebalance::molecule.either`
- def `forcebalance::molecule.EulerMatrix`
Constructs an Euler matrix from three Euler angles.
- def `forcebalance::molecule.ComputeOverlap`
Computes an 'overlap' between two molecules based on some fictitious density.
- def `forcebalance::molecule.AlignToDensity`
Computes a "overlap density" from two frames.
- def `forcebalance::molecule.AlignToMoments`
Pre-aligns molecules to 'moment of inertia'.
- def `forcebalance::molecule.get_rotate_translate`
- def `forcebalance::molecule.main`

Variables

- tuple `forcebalance::molecule::FrameVariableNames`
- tuple `forcebalance::molecule.AtomVariableNames` = set(['elem', 'partial_charge', 'atomname', 'atomtype', 'tinker-suf', 'resid', 'resname', 'qcsuf', 'qm_ghost'])
- tuple `forcebalance::molecule.MetaVariableNames` = set(['fnm', 'ftype', 'qcrems', 'qctemplate', 'charge', 'mult', 'bonds'])
- tuple `forcebalance::molecule.QuantumVariableNames` = set(['qcrems', 'qctemplate', 'charge', 'mult', 'qcsuf', 'qm_ghost'])
- `forcebalance::molecule.AllVariableNames` = QuantumVariableNames|AtomVariableNames|MetaVariableNames|FrameVariableNames
- list `forcebalance::molecule.Radii`
- list `forcebalance::molecule.Elements`
- tuple `forcebalance::molecule.PeriodicTable`
- float `forcebalance::molecule.bohrang` = 0.529177249
One bohr equals this many angstroms.
- tuple `forcebalance::molecule.splitter` = re.compile(r'(\s+|\S+)')

9.23 moments.py File Reference

Classes

- class `forcebalance.moments.Moments`
Subclass of Target for fitting force fields to multipole moments (from experiment or theory).

Packages

- namespace `forcebalance::moments`
Multipole moment fitting module.

9.24 nifty.py File Reference

Classes

- class `forcebalance.nifty.Pickler_LP`
A subclass of the python Pickler that implements pickling of _ElementTree types.
- class `forcebalance.nifty.Unpickler_LP`
A subclass of the python Unpickler that implements unpickling of _ElementTree types.

Packages

- namespace `forcebalance::nifty`
Nifty functions, intended to be imported by any module within ForceBalance.

Functions

- def `forcebalance::nifty.pvec1d`
Printout of a 1-D vector.
- def `forcebalance::nifty.pmat2d`
Printout of a 2-D matrix.
- def `forcebalance::nifty.encode`
- def `forcebalance::nifty.segments`
- def `forcebalance::nifty.commadash`
- def `forcebalance::nifty.uncommadash`
- def `forcebalance::nifty.printcool`
Cool-looking printout for slick formatting of output.
- def `forcebalance::nifty.printcool_dictionary`
See documentation for printcool; this is a nice way to print out keys/values in a dictionary.
- def `forcebalance::nifty.isint`
ONLY matches integers! If you have a decimal point? None shall pass!
- def `forcebalance::nifty.isfloat`
Matches ANY number; it can be a decimal, scientific notation, what have you CAUTION - this will also match an integer.
- def `forcebalance::nifty.isdecimal`
Matches things with a decimal only; see isint and isfloat.
- def `forcebalance::nifty.floatornan`
Returns a big number if we encounter NaN.
- def `forcebalance::nifty.col`
Given any list, array, or matrix, return a 1-column matrix.
- def `forcebalance::nifty.row`
Given any list, array, or matrix, return a 1-row matrix.
- def `forcebalance::nifty.flat`
Given any list, array, or matrix, return a single-index array.
- def `forcebalance::nifty.orthogonalize`
Given two vectors vec1 and vec2, project out the component of vec1 that is along the vec2-direction.
- def `forcebalance::nifty.invert_svd`
Invert a matrix using singular value decomposition.
- def `forcebalance::nifty.get_least_squares`
- def `forcebalance::nifty.lp_dump`
Use this instead of pickle.dump for pickling anything that contains _ElementTree types.
- def `forcebalance::nifty.lp_load`
Use this instead of pickle.load for unpickling anything that contains _ElementTree types.
- def `forcebalance::nifty.getWorkQueue`
- def `forcebalance::nifty.getWQIds`
- def `forcebalance::nifty.createWorkQueue`
- def `forcebalance::nifty.queue_up`
Submit a job to the Work Queue.
- def `forcebalance::nifty.queue_up_src_dest`
Submit a job to the Work Queue.
- def `forcebalance::nifty.wq_wait1`
This function waits ten seconds to see if a task in the Work Queue has finished.
- def `forcebalance::nifty.wq_wait`
This function waits until the work queue is completely empty.

- def `forcebalance::nifty.GoInto`
- def `forcebalance::nifty.allsplit`
- def `forcebalance::nifty.Leave`
- def `forcebalance::nifty.MissingFileInspection`
- def `forcebalance::nifty.LinkFile`
- def `forcebalance::nifty.CopyFile`
- def `forcebalance::nifty.link_dir_contents`
- def `forcebalance::nifty.remove_if_exists`
Remove the file if it exists (doesn't return an error).
- def `forcebalance::nifty.which`
- def `forcebalance::nifty.warn_press_key`
- def `forcebalance::nifty.warn_once`
Prints a warning but will only do so once in a given run.
- def `forcebalance::nifty.concurrent_map`
Similar to the builtin function map().
- def `forcebalance::nifty.multiopen`
This function be given any of several variable types (single file name, file object, or list of lines, or a list of the above) and give a list of files:

Variables

- float `forcebalance::nifty.kb` = 0.0083144100163
Boltzmann constant.
- float `forcebalance::nifty.eqcgmx` = 2625.5002
Q-Chem to GMX unit conversion for energy.
- float `forcebalance::nifty.fqcgmx` = 49621.9
Q-Chem to GMX unit conversion for force.
- float `forcebalance::nifty.bohrang` = 0.529177249
One bohr equals this many angstroms.
- string `forcebalance::nifty.XMLFILE` = 'x'
Pickle uses 'flags' to pickle and unpickle different variable types.
- `forcebalance::nifty.WORK_QUEUE` = None
- tuple `forcebalance::nifty.WQIDS` = defaultdict(list)
- list `forcebalance::nifty.specific_lst`
- tuple `forcebalance::nifty.specific_dct` = dict(list(itertools.chain(*[[j,i[1]] for j in i[0]] for i in specific_lst))))

9.25 objective.py File Reference

Classes

- class `forcebalance.objective.Objective`
Objective function.
- class `forcebalance.objective.Penalty`
Penalty functions for regularizing the force field optimizer.

Packages

- namespace `forcebalance::objective`
ForceBalance objective function.

Variables

- dictionary `forcebalance::objective.Implemented_Targets`
The table of implemented Targets.
- list `forcebalance::objective.Letters = ['X','G','H']`
This is the canonical lettering that corresponds to : objective function, gradient, Hessian.

9.26 openmmio.py File Reference

Classes

- class `forcebalance.openmmio.OpenMM_Reader`
Class for parsing OpenMM force field files.
- class `forcebalance.openmmio.Liquid_OpenMM`
- class `forcebalance.openmmio.AbInitio_OpenMM`
Subclass of AbInitio for force and energy matching using OpenMM.
- class `forcebalance.openmmio.Interaction_OpenMM`
Subclass of Target for interaction matching using OpenMM.

Packages

- namespace `forcebalance::openmmio`
OpenMM input/output.

Functions

- def `forcebalance::openmmio.get_dipole`
Return the current dipole moment in Debye.
- def `forcebalance::openmmio.ResetVirtualSites`
Given a set of OpenMM-compatible positions and a System object, compute the correct virtual site positions according to the System.
- def `forcebalance::openmmio.CopyAmoebaBondParameters`
- def `forcebalance::openmmio.CopyAmoebaOutOfPlaneBendParameters`
- def `forcebalance::openmmio.CopyAmoebaAngleParameters`
- def `forcebalance::openmmio.CopyAmoebaInPlaneAngleParameters`
- def `forcebalance::openmmio.CopyAmoebaVdwParameters`
- def `forcebalance::openmmio.CopyAmoebaMultipoleParameters`
- def `forcebalance::openmmio.CopyHarmonicBondParameters`
- def `forcebalance::openmmio.CopyHarmonicAngleParameters`
- def `forcebalance::openmmio.CopyPeriodicTorsionParameters`
- def `forcebalance::openmmio.CopyNonbondedParameters`
- def `forcebalance::openmmio.do_nothing`
- def `forcebalance::openmmio.CopySystemParameters`
Copy parameters from one system (i.e.
- def `forcebalance::openmmio.UpdateSimulationParameters`

Variables

- dictionary `forcebalance::openmmio.suffix_dict`
- string `forcebalance::openmmio.pdict` = "XML_Override"
pdict is a useless variable if the force field is XML.

9.27 optimizer.py File Reference

Classes

- class `forcebalance.optimizer.Optimizer`
Optimizer class.

Packages

- namespace `forcebalance::optimizer`
Optimization algorithms.

Functions

- def `forcebalance::optimizer.Counter`
- def `forcebalance::optimizer.GoodStep`

Variables

- int `forcebalance::optimizer.ITERATION_NUMBER` = 0
- int `forcebalance::optimizer.GOODSTEP` = 0

9.28 parser.py File Reference

Packages

- namespace `forcebalance::parser`
Input file parser for ForceBalance jobs.

Functions

- def `forcebalance::parser.read_mvals`
- def `forcebalance::parser.read_pvals`
- def `forcebalance::parser.read_priors`
- def `forcebalance::parser.read_internals`
- def `forcebalance::parser.printsection`
Print out a section of the input file in a parser-compliant and readable format.
- def `forcebalance::parser.parse_inputs`
Parse through the input file and read all user-supplied options.

Variables

- dictionary `forcebalance::parser.gen_opts_types`
Default general options.
- dictionary `forcebalance::parser.tgt_opts_types`
Default fitting target options.
- dictionary `forcebalance::parser.gen_opts_defaults = {}`
Default general options - basically a collapsed veresion of gen_opts_types.
- dictionary `forcebalance::parser.subdict = {}`
- dictionary `forcebalance::parser.tgt_opts_defaults = {}`
Default target options - basically a collapsed version of tgt_opts_types.
- dictionary `forcebalance::parser.bkwd = {"simtype" : "type"}`
Option maps for maintaining backward compatibility.
- list `forcebalance::parser.mainsections = ["SIMULATION","TARGET","OPTIONS","END","NONE"]`
Listing of sections in the input file.
- dictionary `forcebalance::parser.ParsTab`
ParsTab that refers to subsection parsers.

9.29 psi4io.py File Reference

Classes

- class `forcebalance.psi4io.GBS_Reader`
Interaction type -> Parameter Dictionary.
- class `forcebalance.psi4io.THCDF_Psi4`
- class `forcebalance.psi4io.Grid_Reader`
Finite state machine for parsing DVR grid files.
- class `forcebalance.psi4io.RDVR3_Psi4`
Subclass of Target for R-DVR3 grid fitting.

Packages

- namespace `forcebalance::psi4io`
PSI4 force field input/output.

9.30 PT.py File Reference

Packages

- namespace `forcebalance::PT`

Variables

- dictionary `forcebalance::PT::PeriodicTable`
- list `forcebalance::PT.Elements`

9.31 qchemio.py File Reference

Classes

- class [forcebalance.qchemio.QCIn_Reader](#)
Finite state machine for parsing Q-Chem input files.

Packages

- namespace [forcebalance::qchemio](#)
Q-Chem input file parser.

Functions

- def [forcebalance::qchemio.QChem_Dielectric_Energy](#)

Variables

- list [forcebalance::qchemio.ndtypes](#) = [None]
Types of counterpoise correction cotypes = [None, 'BASS', 'BASSP'] Types of NDDO correction.
- dictionary [forcebalance::qchemio.pdict](#)
Section -> Interaction type dictionary.

9.32 target.py File Reference

Classes

- class [forcebalance.target.Target](#)
Base class for all fitting targets.

Packages

- namespace [forcebalance::target](#)

9.33 tinkerio.py File Reference

Classes

- class [forcebalance.tinkerio.Tinker_Reader](#)
Finite state machine for parsing TINKER force field files.
- class [forcebalance.tinkerio.Liquid_TINKER](#)
- class [forcebalance.tinkerio.AbInitio_TINKER](#)
Subclass of Target for force and energy matching using TINKER.
- class [forcebalance.tinkerio.Vibration_TINKER](#)
Subclass of Target for vibrational frequency matching using TINKER.
- class [forcebalance.tinkerio.Moments_TINKER](#)
Subclass of Target for multipole moment matching using TINKER.

- class [forcebalance.tinkerio.BindingEnergy_TINKER](#)
Subclass of BindingEnergy for binding energy matching using TINKER.
- class [forcebalance.tinkerio.Interaction_TINKER](#)
Subclass of Target for interaction matching using TINKER.

Packages

- namespace [forcebalance::tinkerio](#)
TINKER input/output.

Functions

- def [forcebalance::tinkerio.write_key_with_prm](#)
Copies a TINKER .key file but changes the parameter keyword as necessary to reflect the ForceBalance settings.
- def [forcebalance::tinkerio.modify_key](#)
Performs in-place modification of a TINKER .key file.

Variables

- dictionary [forcebalance::tinkerio.pdict](#)

9.34 vibration.py File Reference

Classes

- class [forcebalance.vibration.Vibration](#)
Subclass of Target for fitting force fields to vibrational spectra (from experiment or theory).

Packages

- namespace [forcebalance::vibration](#)
Vibrational mode fitting module.
